

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

Medical Science. Containing a concise explanation of the
various Subjects and Terms of Anatomy, Physiology, Pathology,
Hygiene, Therapeutics, Medical Chemistry, Pharmacology,
Pharmacy, Surgery, Obstetrics, Medical Jurisprudence and
Dentistry; Notices of Climate and of Mineral Waters; Formulae
for Official, Empirical, and Popular Medicines; with the
Accentuation and other Synonyms.

With 336 Engravings, 8vo, 25s.

HANDBOOK OF CHEMICAL TECHNOLOGY.

By **RUDOLF WAGNER**, Ph.D., Professor of Chemical Technology, at the University of Wurtzburg Translated and Edited from the Eighth German Edition, with Extensive Additions, by **WILLIAM CROOKES**, F.R.S.

The Subjects are treated of in Eight Divisions, as follows:—

- | | |
|---|--------------------------------|
| 1. Chemical Metallurgy, Alloys, and Preparations made and obtained from Metals. | 4. Vegetable Fibres. |
| 2. Crude Materials and Products of Chemical Industry. | 5. Animal Substances. |
| 3. Glass, Ceramic Ware, Gypsum, Lime, Mortar. | 6. Dyeing and Calico Printing. |
| | 7. Artificial Light. |
| | 8. Fuel and Heating Apparatus. |

Third Edition, with 82 Engravings, 8vo, 6s. 6d.

INTRODUCTION TO INORGANIC CHEMISTRY.

By **WM. G. VALENTIN**,

Principal Demonstrator of Practical Chemistry in the Royal School of Mines and Science Training Schools, South Kensington.

ALSO,

QUALITATIVE CHEMICAL ANALYSIS.

Edited by **W. R. HODGKINSON**.

Fifth Edition, with 18 Engravings, 8vo, 7s. 6d.

ALSO,

CHEMICAL TABLES FOR THE LECTURE ROOM AND LABORATORY.

In five large sheets, 5s. 6d.

18mo, 6s.

PRACTICAL PHARMACEUTICAL CHEMISTRY;

Translated from the Second German Edition of **Dr. G. C. WITTSTEIN** by **STEPHEN DARBY**.

SIXTH EDITION

LONDON

J. & A. CHURCHILL

11, NEW BURLINGTON STREET

1883

1692 f. 10. L

PREFACE

TO THE

SIXTH EDITION

THE favorable reception accorded to the last edition has induced the Editor to endeavour to extend the usefulness of the present volume. To this end, the whole of the work has been revised, and its information corrected and augmented to the present time.

It will be found that each drug is treated of under the following heads:—Its Source, Therapeutics, the Diseases to which it is applicable, its Solubility, the best Vehicles for its administration, its Incompatibles, the Antidotes, its Idiosyncrasy. In this arrangement the aim has been, whilst presenting the formulæ of Chiefs of the Profession, to lead up the Young Prescriber to make his own combinations. Hence the consecutive introduction of *Solubilities*, *Vehicles*, *Incompatibles*, and other remarks in Pharmacy.

Many remedies of old date have been retained as

much for "landmarks" as for aids in domestic medicine. All the prescriptions have been carefully examined, and, where necessary, tested. Nearly two hundred have been discarded as being useless, defective, or inefficient. Others, chemically incompatible but therapeutically valuable, however, have been retained.

The Editor takes this opportunity of acknowledging the very valuable assistance rendered by Mr F. J. Cox, of the Pharmaceutical Society, by his careful revision of the prescriptions and many suggestions.

LONDON, *June*, 1883.

SIGNS AND ABBREVIATIONS OCCURRING IN PRESCRIPTIONS

Referring to the Operation

R., *Recipe*, take.

M., *Misce*, mix.

F., *Fac, Fiat*, make, let there be made.

Div., *Divide*, divide.

Solv., *Solve*, dissolve.

F.S.A., *Fac secundum artem*, make or prepare according to the rules of the art.

M.S.D., *Misce, signa, da*, mix, write (the label or direction), and deliver to the patient.

Referring to Quantity, Weight, or Proportion

A, *āā, ana*, of each.

Singulorum, of each.

Q.S., *Quantum sufficit*, as much as is sufficient.

Q.L., *Quantum lubet*, as much as you please.

C., *Cong.*, *Congius*, a gallon.

O., *Octarius*, a pint; 20 fluid ounces.

℔, *Libra*, a pound (avoirdupois weight); 16 ounces.

℥, *Uncia*, an ounce; 8 drachms; 437½ grains.

f ℥, *Fluiduncia*, a fluid ounce. (This f is often omitted.)

℥, *Drachma*, a drachm; 54·7 grains.

f ℥, *Fluidrachma*, a fluid drachm.

℥, *Scrupulus*, a scruple; 18·2 grains.

Gr., *Granum*, a grain.

℥, *Minimum*, a minim, or drop; also *gtt.*, *gutta*.

ss., *Semis*, a half.

Referring to the Form of the Preparation to be Mixed or Compounded

Co., *Comp.*, *Compositus*, compound.

P., *Pule.*, *Pulvis*, a powder.

Pil., *Pilula*, a pill.
Ext., *Extractum*, an extract.
Elect., *Electuarium*, an electuary.
Bol., *Bolus*, a large pill.
Liq., *Liquor*, a solution.
Tinct., *Tinctura*, a tincture.
Inf., *Infusum*, an infusion.
Dec., *Decoct.*, *Decoctum*, a decoction.
Mist., *Mistura*, a mixture.
Haust., *Haustus*, a draught.
Sp., a spirit.
Syr., a syrup.
Pot., *Potus*, *Potio*, a drink.
Coll., *Collyrium*, an eyewater.
Collut., *Collutorium*, a mouth-wash.
Inj., *Injectio*, an injection.
En., *Enema*, a clyster.
Garg., *Gargarisma*, a gargle.
Lot., *Lotio*, a lotion.
Lin., *Linimentum*, a liniment.
Baln., *Balneum*, a bath.
Empl., *Emplastrum*, a plaster.
Ol., *Oleum*, an oil.

Referring to the Administration

Cap., *Sum.*, *Capiat*, *Sumat*, let the patient take.
Æg., *Æger*, *Ægra*, the patient, the sick man or woman.
Det., *Detur*, let it be given.
Part. 3tiam, 4tam, 6tam, Partem tertiam, quartam, sextam
 the third, fourth, or sixth part (accusative case).
Semel, bis, ter in d., once, twice, thrice a day.
H., *Hora*, an hour.
H. S., *Horæ somni*, at bedtime.
O. n., *Omni nocte*, every night.
O. m., *Omni mane*, every morning.
Coch., *Cochleare*, a spoonful.
Pugil. j., *Pugillus* or *Pugillum*, a pinch.
Poc., *Poculum*, a cup.
Cyath., *Cyathus*, a wineglass.

LIST OF LATIN WORDS AND PHRASES MORE OR
LESS FREQUENTLY MET WITH IN
PRESCRIPTIONS

- Abdomen*, the belly; *abdominis*, of the belly; *abdomini*, to the belly.
Absente febre, in the absence of fever.
Accurate, accurately.
Acme, the height of a fever, &c.
Ad duas vices, at twice taking.
Ad tertiam vicem, for three times.
Ad gratam aciditatem, to an agreeable sourness.
Ad defectionem animi, to fainting.
Ad libitum, at pleasure.
Adde, or *addantur*, add, or let be added.
Adhibendus, to be administered.
Adjacens, adjacent.
Admove, or *admoveatur*, or *admoveantur*, apply, or let it or them be applied.
Adstante febre, when the fever is on.
Adversum, against.
Aggrediente febre, while the fever is coming on.
Aggressus, an attack.
Agitato vase, the phial being shaken.
Albus, white.
Aliquot, some.
Alter, the other.
Alternis horis, every other hour.
Alternis diebus, every second day.
Aluta, leather.
Alvo adstrictâ, when the belly is bound.
Alvus, the belly.
Amplus, large.
Ana, of each ingredient. In the Lond. Pharmacopœia the term *singulorum* is employed instead of *ana*.
Aqua, water. *Aqua astricta*, frozen water. *Aqua bulliens*, boiling water. *Aqua communis*, common water. *Aqua fluvialis*, river water. *Aqua marina*, sea water. *Aqua nivalis*, snow water. *Aqua pluvialis*, or *Aqua pluvialis*,

rain water. *Aqua fervens*, hot water. *Aqua fontana*, or *Aqua fontis*, or *Aqua fontalis*, spring water.

Auris, the ear.

Ast, or.

Balneum Mariæ, or *Balneum maris*, a warm-water bath.

Balneum vaporosum, or *Balneum vaporis*, a vapour bath.

Barbadensis, Barbadoes; as *Aloe Barbadensis*.

Bene, well.

Bibe, drink (thou).

Biduum, two days.

Bihorium, the space of two hours. *Omni bihorio*, every two hours.

Bis indies, twice a day.

Bulliat, or *Bulliant*, let boil.

Butyrum, butter.

Cæruleus, blue.

Calefactus, warmed.

Calomelas, calomel, or subchloride of mercury.

Capiat, let the patient take.

Cautè, cautiously.

Charta, paper.

Cochlear, or *Cochleare*, a spoonful, a tablespoonful. *Cochleatim*, by spoonfuls. *Cochleare amplum*, a large (or table) spoonful, about half an ounce. *Cochleare infantis*, a child's spoonful. *Cochleare magnum*, a large spoonful. *Cochleare medium*, *Cochleare modicum*, a middling spoonful—i. e., a child's or dessert-spoonful: about f 3ij. *Cochleare parvum*, a small (or tea) spoonful: about f 3j.

Cibus, food.

Circa, about.

Cito, quickly.

Clausus, covered.

Coctio, boiling.

Cornu cervi, hartshorn.

Cornu cervi ustum, burnt hartshorn.

Cola, strain. *Colatus*, strained.

Colatura, to, or of, the strained liquor.

Coletur, let it be strained.

Colentur, let them be strained.

Collum, a neck.

Coloretur, let it be coloured.

Compositus, compounded.

Concisus, cut.

Congius, a gallon.

Conserva, a conserve; also, keep thou.

Continuantur remedia, let the remedies be continued.

Contusus, bruised.

Coque, boil; *coquantur*, let them be boiled. *Coque ad medietatis consumptionem*, boil to the consumption of half.

Coque in sufficiente quantitate aquæ, boil in a sufficient quantity of water. *Coque parum*, boil a little while.

Cor., *Cordis*, the heart.

Cortex, bark.

Coxa, the hip.

Crass, to-morrow.

Crass vespere, to-morrow evening.

Cras mane sumendus, to be taken to-morrow morning.

Cras nocte, to-morrow night.

Crastinus, for to-morrow. *In utum crastinum*, for to-morrow's use.

Cribrum, a sieve.

Cucurbitula cruenta, a cupping glass with the scarificator.

Cujus, of which.

Cujuslibet, of any.

Cum, with.

Cyathus theæ, in a cup of tea.

Cyathus, vel
Cyathus vinarius, } a wineglass: from *f 3iss* to *f 3ij*.

Da, give.

De (prep.), of, or from.

De die, in a day.

Deaurentur pilulæ, let the pills be gilt.

Debita spissitudo, a proper consistence.

Debitus, due, proper.

Decanta, pour off.

Decem, ten; *decimus*, the tenth.

Decubitus, lying down.

De die in diem, from day to day.

Deglutiatur, may be (or let be) swallowed.

Dein, *deinde*, then; afterwards.

Dejectiones alvi, stools.

Detur, let it be given.

Detur in duplo, let twice as much be given.

Dexter, dextra, the right.

Diebus alternis, every other day.

Dies, a day ; *diebus*, in days.

Dilue, dilutus, dilute (thou), diluted.

Diluculo, at break of day.

Dimidius, one half.

Directione propriâ, with a proper direction.

Diuturnus, long continued.

Dividatur in partes æquales, let it be divided into equal parts.

Dolor, pain. *Parti dolenti*, to the pained part.

Donec, until.

Donec alvus bis dejiciatur, until the bowels have been twice evacuated.

Donec alvus soluta fuerit, until the bowels shall be opened.

Donec dolor nephriticus exulaverit, until the nephritic pain be removed.

Dosis, a dose.

Dum, whilst.

Durante dolore, while the pain lasts.

Eadem (fem.), the same. *Eodem*, in the same.

Eburneus, made of ivory.

Edulcorata, edulcorated.

Effervescentia, the effervescence.

Effunde, pour out.

Ejusdem, of the same.

Electuarium, an electuary.

Emesis, vomiting.

Enema, a clyster ; *enemata*, clysters.

Evanescent, shall have disappeared.

Exhibeatur, let it be exhibited.

Extende super alutam mollem, spread (thou) upon soft leather.

Fac, make ; *fat, fiant*, let it or them be made.

Fac pilulas deodecim, make 12 pills.

Farina, flour.

Fasciculus, a bundle, which can be carried under the arm.

Febre durante, during the fever.

Febris, fever.

Femoribus internis, to the inner parts of the thighs.

Fervens, boiling.

Fiat haustus, let a draught be made.

Fiat lege artis, let it be made by the rules of art.

Fiat mistura, let a mixture be made.

Fiat secundum artis regulas, let it be made according to the rules of art.

Fiat venesection, bleed.

Pictilis, earthen.

Filtra, filter (thou).

Filtrum, a filter.

Fistula armata, a clyster pipe and bladder fitted for use.

Fluidus, liquid.

Formula, a prescription.

Frustillatim, in little pieces.

Fuerit, shall have been.

Gargarisma, a gargle.

Gelatinâ quâvis, in any kind of jelly. *Gelatinâ ribesiorum*, currant jelly.

Gradatim, by degrees.

Grana sex pondere, six grains by weight.

Granum, grain; *grana*, grains.

Gratus, pleasant.

Gutta, a drop; *guttæ*, drops.

Guttatim, drop by drop.

Guttis quibusdam, with a few drops.

Hac, this; *hanc*, this.

Harum pilularum sumantur tres, let 3 of these pills be taken.

Haustus, a draught.

Hebdomada, a week.

Herba, a herb.

Hæri, yesterday. *Hesternus*, of yesterday. *Hesternâ nocte*, last night.

Hic, hæc, hoc, this.

His adde, add to these.

Hirudo, a leech.

Hora, an hour.

Horâ decubitûs, at the hour of going to bed.

Horâ somni, just before going to bed. *H. S.*

Horâ undecimâ matutinâ, at the eleventh hour in the morning.

Horâ vespertinâ, in the evening.

Horæ unius spatîo, at the expiration of an hour.

Horæ, ¼; horæ quadrante, quarter of an hour.

Horis intermediis, in the intermediate hours.

Hujus modi, of this sort.

Idem, the same.

Idoneus, proper.

Imprimis, first.

Indies, from day to day, or daily.

Incide, cut (thou); *incisus*, being cut.

Infunde, pour in, infuse.

Injectio, an injection.

Injectiatur enema, let a clyster be given.

Inquietudo, restless. *Urgente inquietudini*, if restless.

In pulmento, in gruel.

Instar, as big as.

Inter, between.

Internus, inner side.

Jam, now, already.

Jugulum, the throat.

Julepus, *Julepum*, *Julapium*, a julep.

Jusculum, broth. *Jus bovinum*, beef tea.

Juxta, near to.

Kali præparatum (*Potassæ carbonas*), prepared kali, or carbonate or bicarbonate of potash.

Lac, milk.

Lana, flannel. *Lana nova*, new flannel.

Languor, faintness.

Lateri dolenti, to the side that is painful.

Latus, broad.

Lectus, a bed.

Linteum, lint.

Liquidus, liquid.

Lumborum, the loins.

Magnus, large.

Major, greater.

Maximus, greatest. *Maximè curd*, with the greatest care.

Maximè, chiefly.

Malleolus, the ankle.

Mane, in the morning.

Mane primo, very early in the morning.

Manipulis, a handful.

Manus, the hand. *Mam calefacta*, with a warm hand.

Massa, a mass. *Massa pilularis*, a pill mass.

- Matutinus*, in the morning, early.
Medius, middle. *Pilulæ mediocres*, middle-sized pills.
Melior, melius, better.
Mica panis, crum of bread.
Minimum, a minim.
Minimus, very small.
Minutum, a minute.
Misce, mix.
Mistura, a mixture.
Mitte, send; *mittatur*, or *mittantur*, let be sent.
Mitte sanguinem ad uncias duodecim saltem, take away blood to 12 ounces at least.
Modicus, middlesized.
Modo præscripto, in the manner prescribed.
Mora, delay. *Sine morâ*, without delay.
More dicto, in the manner directed.
More solito, in the usual manner.
Mortarium, a mortar.
Narthicum, a gallipot.
Nates, the buttocks.
Necnon, also.
Nimis, nimium, too much.
Nisi, unless.
Novem, nine. *Nonus*, the ninth.
Novissimi, the last of all.
Novus, new.
Nox, noctis, night. *Nocte*, at night. *Nocte manequæ*, night and morning.
Nucha, the nape of the neck.
Numerus, number.
Nuper, lately.
Nus Moschata, a nutmeg.
Octarius, a pint.
Octavus, eighth.
Octo, eight.
Olla, a pot.
Oleum lini sine igne, cold drawn linseed oil.
Omni hora, every hour. *Omni biduo*, every two days. *Omni bikhorio*, every two hours. *Omni mane*, every morning.
Omni nocte, every night. *Omni quadrante hora*, every quarter of an hour.

Omnino, quite, entirely.

Optimus, best.

Opus, need, occasion.

Orillum jusculum, mutton broth.

Ovum, an egg.

Oz., *Uncia*, the ounce avoirdupois, or common weight.

Pannus, a rag. *Pannus à land*, a piece of flannel.

Pars, partis, a part.

Partes æquales, equal parts.

Partitis vicibus, in divided doses.

Parvulus, an infant; *Coch. parvulum*, a teaspoonful.

Parvus, little.

Pastillus, pastillum, a little ball of paste, to take like a lozenge, &c.

Pectus, the breast.

Pediluvium, a footbath.

Pensus, weighed.

Per, by or through.

Peractâ operatione emetici, when the operation of the emetic is finished.

Per deliquium, by deliquescence.

Pergo, pergere, to go on with.

Perpetuus, perpetual. *Fiat perpetuum*, keep it open.

Ph. B., *B. P.*, or *B.*, for *British Pharmacopœia*. *Ph. D.*, *Pharmacopœia Dublinensis*. *Ph. E.*, *Pharmacopœia Edinensis*. *Ph. L.*, *Pharmacopœia Londinensis*. *Ph. U. S.*, *Pharmacopœia of the United States*.

Poculum, a cup; *pocillum*, a little cup.

Pollex, the thumb; *pollex pedis*, the great toe.

Pondere, by weight.

Pondus civile, civil weight (avoirdupois weight).

Pondus medicinale, medicinal (apothecaries') weight (obsolete).

Pone aurem, behind the ear.

Post singulas sedes liquidas, after every loose stool.

Potus, drink.

Præparata, prepared.

Primus, the first.

Primo mane, very early in the morning.

Pro ratione ætatis, according to the age of the patient.

Pro re natâ, according as circumstances arise (*i. e.*, occasionally).

Pugillus, a pinch ; a gripe between the thumb and first two fingers.

Pulvis ; *pulverizatus*, a powder—powdered.

Pyxis, a pill-box.

Quantum libet,
Quantum placet, } as much as you please.

Quantum sufficiat, or *Quantum satis*, as much as is sufficient.

Quantum vis, *Quantum volueris*, as much as you will.

Quâquâ horâ, each hour.

Quartus, the fourth.

Quatuor, four.

Quinque, five.

Quintus, the fifth.

Quorum, of which.

Raucedo, hoarseness.

R. *Recipe*, take.

Ratio, proportion.

Redactus in pulverem, powdered.

Redigatur in pulverem, let it be reduced to powder.

Regio umbilici, the umbilical region.

Reliquus, remaining.

Repetatur, *repetantur*, let it or them be continued.

Respondeo, to answer.

Retineo, to keep.

Rubus idæus, raspberry.

Saltem, at least.

Sanguis, blood. *Sanguinis missura*, blood-letting.

Scapula, the shoulder blade.

Scatula, a box.

Scilicet, namely.

Secundum artem, according to art.

Secundum naturam, according to nature.

Secundus, second.

Sedes, the alvine evacuation. *Sedes liquidæ*, loose stools.

Semel, one.

Semi, *semis*, a half. *Semidrachma*, half a drachm. *Semi-hora*, half an hour.

Septem, seven.

Septimana, a week.

Serum lactis, whey.

Sescuncia, an ounce and a half.

Sesquihora, an hour and a half.

Sex, six.

Sextus, sixth.

Si, if.

Simul, together.

Sine, without.

Singulorum, of each.

Si non valeat, if it do not answer.

Si opus sit, if there be occasion.

Si vires permittant, if the strength will bear it.

Signetur nomine proprio, let it be written upon with the proper name (not a trade name).

Sit, let it be.

Solus, alone.

Solvo, solvere, solutus, to dissolve, dissolved or loosened.

Somnus, sleep.

Spiritus vini rectificatus, rectified spirit of wine.

Spiritus vini tenuis, proof spirit.

Spiritus vinosus, ardent spirit of any strength.

Statim, immediately.

Stet, let it stand; *stent*, let them stand.

Stupa, tow.

Sub finem coctionis, when the boiling is nearly finished.

Subactus, subdued.

Subinde, frequently.

Subtepidus, lukewarm.

Sumat talem, let the patient take one like this.

Sume,umat,sumatur,sumantur,sumendus, take thou, let him take, let it or them be taken, to be taken.

Summitates, the summits or tops.

Supra, above.

Superbibendo haustum, drinking afterwards this draught.

Tabella (dim. of *tabula*, a table), a lozenge.

Talis, such a one.

Talus, the ankle.

Tempori dextro, to the right temple.

Tempus, temporis, time or temple.

Tenuis, thin, weak.

Ter, three times.

- Ter quaterve*, three or four times.
Tere omnia, rub together.
Tergum, the back ; *a tergo*, behind.
Tero, to rub.
Tertius, third.
Thorax, the chest.
Tinctura, tincture.
Torrefactus, toasted.
Tres, three.
Triduum, three days.
Tritura, triturate.
Trochisci, troches or lozenges.
Typefactus, made warm.
Tussis, a cough.
Tussi molestante, when the cough is troublesome.
Ultimo præsriptus, the last ordered.
Umbilicus, the navel.
Unâ, together.
Uncia, an ounce ; *unciam cum semisse*, an ounce and a half.
Unus, one ; *unius*, of one.
Urgente tussi, when the cough is troublesome.
Utor, uti, to make use of.
Utendus, to be used.
Vaccinum lac, cow's milk.
Valde, very much.
Vas vitreum, a glass vessel.
Vehiculum, a vehicle.
Venæsectio brachii, bleeding in the arm.
Vesper, vespere, the evening.
Vices, turns.
Viginti, twenty.
Vires, strength.
Vitellus, yolk.
Vitello ovi solutus, dissolved in the yolk of an egg.
Vitrum, glass.
Vomitione urgente, the vomiting being troublesome.
Vultus, the countenance.

GAUBIUS TABLE.

*Regulating the ordinary Proportion of Doses
according to the Age of the Patient.*

For an adult, suppose the dose to be 1, or 1 drachm = 60 grs.

A child under 1 year would require $\frac{1}{12}$ „ 5 grains.

„ 2 „ „ $\frac{1}{6}$ „ 8 „

„ 3 „ „ $\frac{1}{4}$ „ 10 „

„ 4 „ „ $\frac{1}{3}$ „ 15 „

„ 7 „ „ $\frac{1}{2}$ „ 1 scruple.

„ 14 „ „ $\frac{1}{2}$ „ $\frac{1}{2}$ a drachm.

„ 20 „ „ $\frac{2}{3}$ „ 2 scruples.

From 21—60, the full dose, 1 „ 1 drachm.

Above 60, an inverse gradation should be observed.

Dr Young's Rule, applicable up to the twelfth year:—
Add twelve years to the age of the child, and divide the
adult or full dose by the sum, thus :

$$\text{Child's age } \frac{1}{12+1} = \frac{1}{13} \quad \frac{2}{12+2} = \frac{1}{7} \quad \frac{3}{12+3} = \frac{1}{5} \quad \frac{4}{12+4} = \frac{1}{4}$$

An * denotes that the preparations are NOT OFFICIAL.

VEHICLES

Cachets de Pain (Wafer Capsules).—An excellent means of administering nauseous powders, &c. They consist of two hollowed discs uniting at their margins by moisture. In composition they are of a glutinous nature. When administered they should be placed for thirty seconds in a tablespoonful of water in a wineglass, when the whole may be comfortably swallowed.

Gelatine Capsules.—Elongated capsules of various sizes made from lemon-flavoured gelatine. Nauseous, soft, or oxidizable pill-masses may be conveniently given in these, as Ergotine, Nitrate of Silver diluted with Silica or Nitrate of Potash.

By means of either of the above vehicles, medicines chemically incompatible may be given at the same time, as Nitrate of Silver with Opium.

Glyco-gelatine.—A basis for medicated Pastilles as Iodoform, Bismuth, and Morphia. It is composed of Gelatine, Glycerine, and Orange-flower Water.

THE

BOOK OF PRESCRIPTIONS

*ABELMOSCHUS. *Musk Seeds*

The seeds of *Abelmoschus Moschatus* (Nat. Ord. *Malvaceæ*) have the odour of musk. They are regarded as cordial and stomachic. They are useful in indigestion, with nervousness and high-coloured urine, and in all cases requiring a mild cordial and stomachic. In the West Indies, powdered and steeped in rum, they are applied as an external remedy for the bites of serpents.

The only preparation used in this country is the *Tinctura Abelmoschi*.
Dose.— $\frac{1}{4}$ to $1\frac{1}{2}$ drachm.

℞ Tinct. Abelmoschi, ʒj.
 Tinct. Lupulinæ, ʒiij.
 Liq. Potassæ, ʒij.
 Inf. Buchu, ʒvj. Misce.

Three tablespoonfuls three times a day.

In Indigestion, with nervousness and high-coloured urine.

Dr R. REEVE.

ABSINTHIUM, see ARTEMISIA

ACACIA. *Gum Arabic*

A white gum, free from starch, the product of *Acacia vera* and other species (Nat. Ord. *Leguminosæ*). It is demulcent, emollient, nutritive. In combination with resin, the powdered gum is used as a styptic, and in the form of mucilage has been recommended as an application to burns.

It is useful in irritability of the intestinal canal, and the respiratory and urinary organs.

Solubility.—1 in 1 of water. Insoluble in alcohol, ether, &c.

Incompatibles.—Sulphuric acid, alcohol, subacetate of lead, borax, persalts of iron render it gelatinous.

It is chiefly used in solution.

Dose of Pulvis Acaciæ, ad libitum.

Mucilago Acaciæ, 1 to 4 drachms.

- 1 ℞ Mucilag. Acaciæ, ℥iss.
 Aque, f ℥iiss.
 Syrupi, f ℥ss. Misce.

A tablespoonful frequently.

In Bronchial Catarrh of Children.—Dr URB.

- 2 ℞ Mucilag. Acaciæ, f ℥ij.
 Aque, f ℥v.
 Syr. Tolu.

Aque fl. Aurantii, aa f ℥j.

Fiat mistura. Sumat cochl. unum amplum secundâ quaque horâ.

In Irritation of Mucous Membranes.—Dr JOY.

- 3 ℞ Pulv. Acaciæ,
 Mel. Optimi, ana f ℥ss. Misce.

A teaspoonful frequently.

In Catarrhal Cough.—SAINTE MARIE.

- 4 ℞ Mucilag. Acaciæ, f ℥ij.
 Syr. Mori, f ℥j.
 Aque Rosæ, f ℥ij.
 Tinct. Scillæ, f ℥j. Misce.

Cochlearia duo vel tria ampla sumantur subinde.

A Demulcent and Expectorant.—Mr BRANDE.

ACETUM. *Vinegar*

An acid liquid, of a brown colour and pungent odour, principally obtained from malt and unmalted grain by acetous fermentation. It is astringent, diaphoretic, diuretic, refrigerant, antiseptic, discutient, disinfectant, styptic. It diminishes the excessive perspiration in hectic and other inflammatory fevers. In a diluted form, applied topically, it allays any increased heat of the skin and produces a soothing effect. Combined with infusion of sage, it forms an astringent gargle. It is the best and most convenient antidote in cases of poisoning by Alkalies. *Distilled vinegar* has the same properties and uses; and both may be regarded as weak acetic acid.

vent infection; with equal parts of water it is used subcutaneously in cancer. Blotting paper saturated with the strong acid is used as a speedy vesicant. *Pyroligneous acid*, as employed in the following prescriptions, denotes an acetic acid from wood which has been rectified, but not entirely freed from creasote and other tarry products, which are said to increase its antiseptic powers. *Diluted acetic acid* only differs from distilled vinegar in being free from some accidental impurities in the latter.

Vehicle.—For Acidum Aceticum, honey and water, barley water.

Dose of Acidum Aceticum Dilutum, 1 to 2 drachms.

- 1 ℞ Acidi Acetici, f ʒj.
 Sp. Camphoræ, f ʒiij.

Misce: fiat embrocatio.

As a Rubefacient.—MR BRANDE.

- 2 ℞ Acidi Acetici, f ʒj.
 Aquæ, f ʒiij. Misce.

The shaved scalp to be rubbed over with this acid. The red spots produced show the infected parts, and are to be each wet with *undiluted* acetic acid for three or four minutes, by means of a sponge tied on a stick. The disease is generally cured by one application.

In Tinea Capitis.—DR WIGAN.

- 3 ℞ Acidi Acetici diluti,
 Mel. Boracis, aa ʒj.
 Aquæ, ʒiv. Misce: fiat lotio.

In Porrigo of Children.—DR HEADLAND.

- 4 ℞ Myrrhæ pulv. ʒj.
 Ol. Cassiæ, mʒj.
 Bals. Peruviani, mʒiv.
 Acid. Pyrolig. rectif. ʒij.
 Carbonis pulv. q. s. q. fiat electuarium gingivale.

As an Antiscorbutic to the Gums.—PHEBUS.

- 5 ℞ Acidi Acetici Pyrolig. mxxv.
 Liq. Ammon. Acet. f ʒiiss.
 Aquæ Camphoræ, f ʒj.
 Syr. Zingiberis, f ʒss.

Misce: fiat haustus ter quaterve in die sumendus.

In Offensive Discharges after Abortions.—DR COPLAND.

- 6 ℞ Acidi Pyrolignei rect. ʒj.
 Aquæ fl. Aurantii, ʒij.
 Syr. Amygdalæ, ʒj. Misce.

A large teaspoonful every hour.

In Gelatiniform Softening of Stomach, &c., of Children.

PITSCHAFF.

- 7 ℞ Acidi Pyrolignei, ʒj.
 Inf. Salvie, ʒvj.
Misce: fiat gargarisma.

In Putrid Sorethroat.—FRANKEL.

* ACIDUM ACETICUM AROMATICUM

Aromatic Acetic Acid

A liquid composed of glacial acetic acid and the aromatic oils of cloves, cinnamon, &c. It is stimulant and rubefacient. It is useful in the form of vapour in syncope, and as a blistering medium applied on spongio-piline.

ACIDUM ACETICUM GLACIALE

Glacial Acetic Acid

A colourless liquid, with a pungent acetous odour. It is three times the strength of acetic acid. At 34° F. it is converted into a mass of crystals. *Externally*, it is vesicant and caustic, and is useful as a substitute when cantharides is contra-indicated. When scented it is used in vinaigrettes. It may be applied with care to corns and warts. It dissolves camphor, the resins, and volatile oils.

ACIDUM ARSENIOSUM. *Arsenious Acid. White*

Arsenic

A heavy white powder, or occurring in stratified opaque masses; anhydrous. All its soluble preparations are violently poisonous, and its insoluble preparations are all, probably, so far acted upon by the fluids of the stomach as to become so. It is alterative, antiperiodic, febrifuge, tonic, and a powerful caustic. It is useful in obstinate chronic diseases of the skin and joints, intermittent fevers, amenorrhœa, dysmenorrhœa, menorrhagia, &c. It is contra-indicated when there is a quick pulse and hot skin.

Solubility.—1 in 20 of boiling water, 1 in 5 of glycerine.

Vehicle.—Sugar of milk as a diluent for arsenious acid in the p form; steel wine; bitter infusion with syrup of orange; compound tincture of cinchona; infusion of dulcamara.

Incompatibles.—Salts of iron, magnesia, lime water, astringent salt

Antidotes.—Cold affusion, emetics, ammonia, artificial respiration, moist peroxide of iron, calcined magnesia, carron oil, solution of dis iron, &c.

Arsenic should always be taken after a meal, and its administration stopped on the occurrence of pains in the epigastrium, nausea, animation of the eyelids.

Dose of Acidum Arseniosum, gr. $\frac{3}{8}$ to $\frac{1}{4}$.

Liquor Arsenicalis (Fowleri), 2 to 8 minims.

„ *Arsenici Hydrochloricus*, 2 to 8 minims.

„ *Sodæ Arseniatis*, 2 to 8 minims.

Arsenias Ferri, gr. $\frac{1}{8}$.

„ *Sodæ*, gr. $\frac{1}{8}$ to $\frac{1}{4}$.

ACIDUM BENZOICUM. *Benzoic Acid*

Occurs in feathery, crystalline, silky plates and needles, nearly colourless, and with an aromatic odour. It is obtained by sublimation from benzoin. It is expectorant, stimulant, diuretic, styptic. The vapour is deodorant and antiseptic. It is useful in inflammation of the urinary bladder, nocturnal incontinence of urine, calculous affections, and congestion of the liver. It changes uric acid into hippuric acid.

Solubility.—1 in 12 of boiling water, 1 in 3 of spirits, 1 in 250 of cold water. Its solubility in water may be much increased by the addition of four parts of phosphate of sodium, or one part and a half of biborate of sodium.

Vehicle.—The lozenge of the Throat Hospital Pharmacopœia containing gr. ʒ. The compound tinctura in mistura amygdalæ, or in an emulsion made with acacia and oil of almonds. For inhalation of benzoin, the compound tinctura in water at 140° Fah.

Dose.—5 to 15 grains.

See BENZOINUM.

***ACIDUM BORACICUM. Boracic Acid**

In white scaly crystals, prepared by adding sulphuric acid to a strong solution of Borax. It burns with a characteristic green flame. It has been given as an alterative in cerebral affections. *Externally*, it is used in the form of saturated dressings as an antiseptic for wounds, ulcers, &c.

Solubility.—1 in 8 of boiling water, 1 in 4 of glycerine, 1 in 30 of cold water and alcohol.

- 1 ℞. Acidi Boracici, ℥j.
 Aque Camphoræ, ℥iv.

ACIDUM CARBOLICUM. Carbolic Acid. Phenic Acid. Phenol

A crystalline solid obtained in the distillation of coal tar between the temperature of 320° and 392° F. Its melting point is 95° F. By the addition of 5 per cent. of water it may be maintained in the liquid state. It is caustic, diaphoretic, a vascular depressant, a vermifuge, antiseptic, and disinfectant. It is useful in heartburn or painful dyspepsia with flatulence, whooping cough, phthisis, scarlatina, measles, small pox, intestinal worms, and checks sickness and diar-

rhœa. *Externally* a strong solution acts as a caustic weak solution as a sedative. It arrests fermentation putrefaction, retards ulceration and suppuration; promotes healing. As a lotion it is applied in irritable chronic diseases, and as a gargle in putrid sorethroat.

Solubility.—1 in 20 water, and readily in glycerine, olive oil, chloroform, ether, volatile oils, &c.

Vehicle.—For internal administration are:—Glyco-gelatinæ, mistura amygdalæ, decoctum hordei, or infusum lini as a diluent essential anise to disguise the odour and taste.

Antidote.—Strong tea or coffee, stomach pump, emetics, olive oil, oil, albumen, diluted sulphuric acid, &c.

The odour of carbolic acid is removed by a solution of chloride of lime.

Dose of Acidi Carbolici, 1 to 3 grains in water or pill.

Glycerinum Acidi Carbolici (1 part to 4 of glycerine), 5 minims in water.

Suppositoria Acidi Carbolici. Useful in cancer of uterus and rectum as a disinfectant.

* Emplastrum Acidi Carbolici (University College Hospital) is applied to all sores, to lessen the discharge, strapping plaster retaining it in its place.

* Carbolic Oil, 1 part to 8, is much employed in surgical dressing catgut ligatures are saturated with it.

In Leucorrhœa or Gonorrhœa.—*

* ACIDUM CARBONICUM. *Carbonic Acid Gas*

A colourless gas, chiefly obtained by decomposing carbonate with one of the stronger acids, as sulphuric. In the form of simple aerated water, soda-water, effervescent draughts, &c., it is antacid, antihidrotic, refrigerant, antiseptic, stimulant. Inhaled, it is a powerful poison, checks vomiting, and allays thirst and gastric irritation.

The gas is applied topically to the skin as a cutaneous stimulant, and to ulcers, to promote suppuration and diminish fætor. It has been injected into the rectum in cancerous ulcers, and in dysentery; and into the uterus in a painful condition of that organ.

Carbonic acid is an active ingredient in the following official compounds:—*Liquor Potassæ Effervescens*; *Liquor Sodæ Effervescens*.

* ACIDUM CHROMICUM. *Chromic Acid*

Occurs in brilliant crimson-red prisms; very deliquescent. It is obtained by adding strong sulphuric acid to bichromate of potassium. It is a powerful caustic, and, when freely diluted in solution, an efficient antiseptic. In the form of a saturated solution, it is a useful and convenient escharotic, and is best applied on the sharpened point of a piece of ordinary firewood. It is used to remove morbid growths, as warts, vascular tumours, &c.

Solubility.—2 in 1 water, decomposed by alcohol.

1 ℞. Acidi Chromici, gr. 100.
Aq. ʒj. Fiat lotio.

For removal of small Morbid Growths.—Mr J. MARSHALL.

* ACIDUM CHRYSOPHANICUM. *Chrysophanic Acid*

The colouring principle of rhubarb root is commercially obtained from Araroba or Goa powder to the extent of 80 per cent. It occurs as a pale yellow powder or in needles, inodorous, and nearly tasteless. It is employed as a topical remedy in ringworm, psoriasis, and like cutaneous diseases.

Solubility.—Its best solvent is benzol.; it also dissolves readily in olive oil and chloroform. It is almost insoluble in water.

Vehicle.—White vaseline as an ointment basis.

Icterycness.—It stains the skin a deep purple.

In applying any preparation of this drug, care must be taken to avoid its coming in contact with the eyelids, as it is apt to cause cedema and even erythema.

1 ℞. Acid. Chrysophanici, gr. xx.
Olei Rosmarini, mxxx.
Vaselin Alb. ʒj. M.: fiat unguentum.

ACIDUM CITRICUM. *Citric Acid*

A crystalline acid, occurring in colourless right rhombic prisms, obtained from lemon juice or from the juice of the lime. It is refrigerant, diuretic, antiscorbutic, and a vascular depressant. *Externally*, it allays irritation of the skin. It is useful in quenching thirst and diminishing febrile heat; in rheumatism, scurvy. In large doses it reduces the pulse.

Solubility.—10 in 6 of water, 1 in 2 of glycerin.

Vehicle.—Lemon juice, lime juice, sweetened lemonade.

Incompatibles.—Alkaline carbonates, acetates, and sulphates.

Table of Equivalents

17 gr. of Citric Acid neutralise about:

84	gr. Carbonate of Soda.
24	„ Bicarbonate of Potash.
20	„ Bicarbonate of Soda.
20	„ Carbonate of Potash.
14	„ Carbonate of Ammonia.
11	„ Carbonate of Magnesia.

Dose.—10 to 30 grains.

1 ℞ Acidi Citrici, gr. iv.

Aquæ, ℥j. Fiat gargarisma.

In Cancer of the Tongue.—Dr BRANDINI.

ACIDUM GALLICUM. *Gallic Acid*

A pale fawn-coloured crystalline, occurring in prisms or silky needles, prepared from galls. It is astringent. It is preferred to tannic acid as a remote astringent in excessive or hectic perspiration, albuminuria, hæmaturia, hæmoptysis, pyrosis, uterine hæmorrhage.

Solubility.—1 in 100 of cold water, 1 in 3 of boiling water. Borax is added to the solution of gallic acid in water. 1 in 8 of rectified spirit, 1 in 5 of glycerine (warmed).

Vehicle.—White sugar, wafer, or gelatine capsules, infusion of orange milk, mistura amygdalæ, cinnamon water. In pill with confection of roses or glycerine of tragacanth. Citrate of potash, 20 grains, will dissolve as much as 15 grains of gallic acid. This solution will remain perfectly clear.

Incompatibles.—Metallic salts. Sp. Etheris Nitrosi.

Dose of Acidum Gallicum, 2 to 10 grains.

ACIDI HYDROBROMICI SOLUTIO

Solution of Hydrobromic Acid

It is prepared by mixing a solution of bromide of sodium and tartaric acid. It is a nervine tonic, antispasmodic. It is useful in nervous exhaustion, congestive headache, debility, hysteria associated with ovarian element, vomiting of pregnancy, ovarian menorrhagia, hiccup, cough.

Vehicle.—Water and syrup of orange.

It is given with quinine or iron when these drugs cannot otherwise be tolerated.

Dose.—30 to 60 minims.

*In Congestive Headache.*ACIDUM HYDROCHLORICUM. *Hydrochloric Acid*ACIDUM MURIATICUM PURUM. *Muriatic Acid*

Hydrochloric acid gas is prepared by heating a mixture of common salt and oil of vitriol diluted with a small quantity of water, and collected over mercury, or by dis-

ment. It is colourless, fuming strongly in the air, and has an acid, suffocating odour. The pharmacopœial preparation contains 31·8 per cent. by weight of hydrochloric acid gas. Hydrochloric and nitric acid in combination, dissolve gold, hence the name of *Aqua Regia* given to the mixture. In a very diluted form it is antiseptic, refrigerant, tonic, vermifuge. It is given in scarlet fever, typhus, hepatic affections, phosphatic urinary deposits, syphilis, intestinal worms. *Externally*, as a gargle, in ulcerated sorethroat & thrush.

Vehicles.—Infusion of orange peel with syrup, decoction of barley.

Incompatibles.—Salts of silver and lead, alkalies and their carbonates.

Antidotes.—Emollient drinks, soapsuds, chalk, magnesia, castor oil, followed by nutritive enemata and opium.

ACIDUM HYDROCYANICUM DILUTUM

Dilute Hydrocyanic Acid. Prussic Acid

The medicinal acid is prepared by the action of boiling dilute sulphuric acid upon ferrocyanide of potassium. It is a colourless and exceedingly volatile liquid, with a most characteristic powerful odour resembling that of peach-

blossoms or bitter-almond oil. It is a deadly poison; a single grain of the pure acid will destroy life. Cyanic acid is used in a solution containing only 2 per cent. of real acid. The acid may also be obtained from almonds and other species of the *Rosaceæ*. It is emetic, sedative, a vascular depressant, and allays irritability. The vapour is sometimes applied to the face and is also inhaled. It is employed to quiet irritative spasmodic cough; to allay vomiting and nervous tremors; and to relieve pain and quiet the system in rheumatic, and other like affections. *Externally* it is used in lotions, to allay itching in some cutaneous diseases. In the form of inhalation has been tried in some cases of the lungs.

Vehicle.—Dilute mucilage water, an effervescing mixture; tinctures of bismuth; almond emulsion.

Incompatibles.—Salts of silver, copper, iron, &c.

Antidotes.—Fresh air, artificial respiration, with cold affusion of iron, with an alkaline carbonate. In cases of inhalation remedies are ammonia and chlorine.

It is suggested that pure Cyanide of Potassium should be introduced by prescribers in lieu of Hydrocyanic Acid. The solution as dispensed is of 2 per cent. strength, but it is quite as likely to be below.

* Acidum Hydrocyanicum (Scheeli), often met with in prescriptions now obsolete. Its strength, as compared with the pharmacopœia, is 5 to 2.

* Potassii Cyanidum has the same properties and uses as Hydrocyanic Acid. It removes the stains of Nitrate of silver. Entomologists use it with tincture of iron, to make poison baths for killing insects with them. *Dose*.— $\frac{1}{4}$ to $\frac{1}{2}$ gr. The latter quantity is equal to $\frac{1}{2}$ of Hydrocyanic Acid.

Dose of Acidum Hydrocyanicum Dilutum 2 to 8 m.

Vapor Acidi Hydrocyanici is used for inhalation.

 In Diphtheria (as a spray).—*

ACIDUM MURIATICUM. See ACIDUM HYDROCHLORICI

ACIDUM NITRICUM. *Nitric Acid*

This powerful acid is obtained from potassium or sodium nitrate by the action of strong sulphuric acid and heat. It is colourless and exceedingly corrosive. In a dilute form it is refrigerant, tonic, antiseptic, and disinfectant. It is useful in chronic hepatitis, in indigestion when associated with mixed urinary deposits of uric acid and the phosphates, in whooping-cough, asthma, in syphilitic affections, in broken-down and scrofulous constitutions, febrile diseases, and in necrosis of bone. It is employed as an injection in phosphatic calculus. The *red fuming nitric acid* is sometimes preferred, particularly in cholera. *Strong nitric acid* is used locally as a caustic to warts, vascular growth, sloughing phagedænæ, hæmorrhoidal excrescences, &c.; and, in a more diluted form, to superficial ulcers which are indisposed to cicatrise, to offensive sores, and to caries of the bones. It is best applied by means of a pointed piece of ordinary firewood. The vapour of nitric acid is disinfectant, but inferior to chlorine.

Vehicle.—Infusion of orange peel with syrup, decoction of barley.

Incompatibles.—Alcohol, alkalis, oxides, carbonates, &c.

Antidote.—Albumen, and as for hydrochloric acid.

Dose of Acidum Nitricum Dilutum. 10 to 30 minims.

For sponging the body, add f ʒiij of the above to Oj of warm apply it for a quarter of an hour.

27. As a FOOT-BATH, add 6 ounces of the acid to 2 gallons of water in a wooden or earthen vessel; and while the feet are in the bath (the temperature of which should be 96° or 98°) the inside of the legs and arms, and the right side over the liver should be sponged: This should be continued for fifteen minutes, morning and evening draught of salts in a bitter infusion should be taken every morning.

In Chronic Affections of the Liver.—Sir J. R.

ACIDUM NITRO-HYDROCHLORICUM DILUTUM

Diluted Nitro-hydrochloric or Nitro-Muriatic Acid

A colourless compound of nitric acid, 3 parts; hydrochloric acid, 4 parts; and water, 25 parts. It is alterative, a hepatic stimulant, stomachic, tonic. It is employed in the same cases as in nitric and hydrochloric acid. It is, however, thought to act more decidedly on the liver, especially as applied to the skin by foot-baths and sponging. Aqua regia is composed of nitric acid 1 and hydrochloric 2 parts.

Vehicle.—Succus Taraxaci; as for nitric acid.

Antidote.—Emetics. Albumen.

Dose of Acidum Nitro-hydrochloricum Dilutum, 5 to 20 minims.

1 ℞ Acidi Nitro-hydrochlor. dil. ʒij.

Aquæ, ad ʒiiss. Fiat mistura.

As a Rubefacient in Chest Affections.—Dr GREAVES.

ACIDUM PHOSPHORICUM. *Phosphoric Acid*

A colourless liquid obtained by boiling phosphorus with nitric acid and water until dissolved, then evaporating to a low bulk so as to remove nitrous compounds. It is alterative, antihidrotic, refrigerant, tonic, sedative. It is given in caries, rickets, night sweats, diabetes, vomiting and diarrhœa of biliousness, tickling cough; convalescence from fever; and is thought to possess peculiar efficacy

where there is a tendency to earthy deposits in the ur
to exostosis, and to ossification of the arteries.

Vehicle.—The bitter and aromatic tinctures and syrups, with water

Incompatibles.—Lime water ; carbonate of soda, &c.

Dose of Acidum Phosphoricum Dilutum, 10 to 30 minims.

Dr T. H. TA

ACIDUM PHOSPHORICUM GLACIALEMetaphosphoric Acid*

is in transparent, colourless, glass-like mucus, absorbing atmospheric moisture. In bark or solution readily coagulates albumen. It is a convenient substitute for nitric acid in testing urine.

ACIDUM OXALICUM. Oxalic Acid

A crystalline acid occurring in transparent, oblique, rhombic crystals, and obtained chiefly from sawdust by the action of sulphuric acid, and the hydrates of sodium and potassium, and heat. On evaporation, in small doses, it is used as a refrigerant, and is considered to be useful in some inflammatory conditions of the mucous membranes. Salt of sorrel and the artificial acid of potash possess the same poisonous and remedial properties.

Dose.—1 in 10 of cold water, and own weight in boiling water; 1 in 10 of rectified spirit.

Preparation.—An aqueous solution, with syrup of tolu, or lemon. Decoction of cinchona.

Contraindications.—Lime water, carbonate of soda.

Uses.—The immediate administration of chalk, whiting, or magistral water, or any demulcent drink.

acid or acid of sugar is one of the most rapid and fatal of poisons.

In Acute Rheumatism.—*

ACIDUM SULPHURICUM. *Sulphuric Acid*

A colourless oily liquid of intense acid taste and reaction, obtained by the oxidation of sulphurous acid with nitrous and hyponitric acids. Concentrated sulphuric acid, or *oil vitriol*, is composed of 40 parts of sulphuric oxide and 60 parts of water. In a dilute form it is antihydrotic, antiseptic, astringent, refrigerant, tonic. *Externally*, the strong acid is caustic. It is useful in hæmorrhages and liquid sweats, typhoid and the exanthematous fevers, weakness of the digestive organs, and cases attended with bilious pyrosis, chronic catarrhal diseases, hiccup, and other cutaneous affections. It has been given with remarkable success in epidemic cholera and diarrhœa. *Radhausen acid*, a fuming liquid, has been used in cases of cancer.

Vehicle.—Infusion of orange-peel, or of gentian with syrup.

Compatibles.—Alkalies and their carbonates; salts of lead and lime.

Antidotes.—Magnesia, and as for nitric acid.

Dose of Acidum Sulphuricum Dilutum, 5 to 20 minims.

Acidum Sulphuricum Aromaticum, 5 to 30 minims.

ACIDUM SULPHUROSUM. *Sulphurous Acid*

Sulphurous acid gas is produced in dense fumes by ing sulphur. This gas, diluted to the extent of 9 per forms the medicinal preparation. It is colourless, v pungent sulphurous odour. It is antiseptic, disinfe deoxidising. It is used both internally and extern skin diseases produced by vegetable or animal parasite has been given to cure vomiting caused by *Sarcina tricoli*. Applied by means of a spray-producer, it is us sorethroat, diphtheria, bronchitis. *Externally*, it fo stimulating lotion for bed-sores, ulcers, scalds, burn is used as a gargle.

Vehicle.—Water. For inhalation it may be mixed with water, (China clay) and oil of winter green, or fumigating pastilles co sulphur may be ordered.

Dose.— $\frac{1}{2}$ to 1 drachm.

For lotion or spray, diluted with 1 or 2 parts of water.

For gargle, diluted with 1 to 5 parts water.

ACIDUM TANNICUM. *Tannic Acid*

A pale yellow mass or glistening scale extracted from ls. A more potent topical application than gallic acid. Is a powerful astringent, general tonic, and peptic. It is useful in restraining hæmorrhages from the stomach and vessels, and in checking other discharges. *Externally*, it is styptic and astringent in uterine hæmorrhages, dysentery, and diarrhœa. In the dry state it is applied to cancer; diluted with oil it is employed for burns; or with ether, used in coryza, &c. It is doubtful whether it is taken into the circulation, except so far as it may be condensed into gallic acid.

Solubility.—1 in 1 of cold water or rectified spirit, 1 in 3 of glycerine.
Vehicle.—Milk, infusion of orange, mistura amygdalæ, cinnamon water. It is also with confection of rose or glycerine of tragacanth.

Compatibles.—Mineral acids, alkalies, lead, silver, persalts of iron, astringents, &c.

The suppositoria are used as astringent applications to the rectum.

Hunter's pastilles contain tannic acid 30 gr., opium 1 gr., glycerine. They are applied in cylindrical form to the male urethra.

The glycerine of tannic acid would be more powerful as a topical astringent if first mixed with a small proportion of water to satisfy the hygroscopic property of glycerine.

Richardson's styptic is a saturated solution of tannic acid and colloidal ether.

ACIDUM TARTARICUM. *Tartaric Acid*

A colourless crystalline mass, occurring in oblique rhombic prisms, and obtained from the acid tartrate of potash. It has the same therapeutic action as citric acid, for which it was formerly much employed, being less costly. It is, however, more irritant, and in doses of a few drachms has proved fatal. It is often employed with carbonate or bicarbonate of potash to make effervescing saline draughts. Added to salts of iron it prevents the precipitation of oxides by alkalies.

Solubility.—10 in 8 of water, 1 in 5 of rectified spirit.

Vehicle.—Aërated water flavoured with syrup of lemon or ginger.

Incompatibles.—Vegetable astringents, salts of potash, lime, mercury, lead.

Dose.—10 to 30 grains.

Sedative Application in Uterine Affections.—I

ACONITUM. *Aconite*

The leaves, flowering tops, and root of the *A. Napellus* (Nat. Ord. *Ranunculaceæ*). Aconite is a poison. It is cultivated in gardens for the peculiar arrangements of its flowers, and is known as *Monkshood*. The root has been mistaken for horse-radish. It produces a sensation of tingling and numbness in the mouth and throat, and the parts to which it is applied is anodyne, diaphoretic, diuretic, sedative, vascular stimulant. It is useful in neuralgia, acute rheumatism, neuralgia, carcinoma, dropsy, hypertrophy of the heart, and in all cases of inflammation with high temperature and quick pulse,

phthisical expectoration. Administered in the form of the tincture, in doses of one minim to a drachm of water every hour, it reduces the heat of the body, produces a gentle diaphoresis, and lowers the action of the heart. This treatment, however, must be closely watched, and the state of the pulse ascertained before a dose is repeated. *Externally*, it relieves nervous, neuralgic, rheumatic, and other pains.

Vehicle.—The tincture in chloroform water. The extract in pill.

Antidotes.—Emetics, internal and external stimulants, subcutaneous injection of atropia.

Dose of Extractum Aconiti (from the leaves), 1 to 2 grains.

Tinctura Aconiti (from the root), 5 to 15 minims. It irritates the bowels less than the extract.

Linimentum Aconiti (from the root) is best applied mixed with the soap, or compound camphor liniment in equal parts.

*Succus Aconiti, 15 to 20 minims (from the leaves).

*Chloroformum Aconiti is a special anti-neuralgic, topically applied.

*Extractum Aconiti|Alcoholisatus, $\frac{1}{2}$ grain, gradually increased.

*Fleming's Tinctura Aconiti is six times the strength of the P. B.

*Pastillus Aconiti (each containing 1 minim of Tinctura Aconiti).

*Trochisci Aconiti (each lozenge contains $\frac{1}{4}$ of a minim of Tinctura Aconiti).

In Neuralgia.—*

ADEPS BENZOATUS. *Benzoated Lard*

It consists of prepared lard and benzoin. It is used for suppositories, and in the ointments of galls, lead, sulphur, and zinc.

ADEPS PRÆPARATUS. *Prepared Lard*

The purified fat of the hog, *Sus Scrofa*. It is used in most of the ointments. *Externally*, it is emollient. It is useful in scabies and to destroy pediculi. In poultices it retards evaporation of the moisture.

Solubility.—Entirely in ether and in oil of turpentine.

Mixed with red oxide of mercury it turns blue on keeping.

ÆTHER. *Ether*. Sp. gr. .735

A preparation from alcohol. It is a colourless, volatile, inflammable liquid, of a strong, sweet odour, hot and pungent taste. *It is a powerful diffusible stimulant, antispas-*

modic, calmative, expectorant, narcotic, and anæsth is useful in spasmodic asthma, angina pectoris, (the stomach, flatulent colic, hiccough, nervous pal fainting. *Externally*, it is applied to produce cold poration ; or, if the vapour be confined, as a rubefac stimulant. *Inhaled*, it produces insensibility to pa used for this purpose in surgical operations. In so fatal results have followed its use, yet it is one of tl anæsthetics known.

Given as an anæsthetic to old people, it produces more or l toration.

It is a solvent of the volatile and fixed oils, many of the balsams, and the organic vegetable alkaloids, and of iodine and t Chloric Ether is an alcoholic solution of chloroform double th of Spiritus Chloroformi.

Pure ether (*Ether Purus*) has a sp. gr. .720, and is free fr and water. It is sometimes preferred as an anæsthetic.

Spiritus Ætheris Nitrosi (spirit of nitrous ether) is stimulant, d and diuretic. It is useful in dropsy and bronchial catarrh not be combined with emulsions, gallic, and tannic acid, iodide aium, or tincture of guaiacum.

Solubility.—1 in 10 of water ; freely in rectified spirit.

Vehicle.—It is best prescribed in the form of Spiritus Ætheris *Antidotes*.—Fresh air, artificial respiration, inversion of galvanism.

Dose of Ether, 20 to 40 minims.

Spiritus Ætheris (Hoffman's Anodyne), 30 to 60 minin

Spiritus Ætheris Nitrosi, $\frac{1}{2}$ to 2 drachms.

ALOE BARBADENSIS. *Barbadoes Aloes*

The inspissated juice of the leaf of the *Aloe Vulgaris* from Barbadoes (Nat. Ord. *Liliaceæ*). It is a more active purgative than the Socotrina Aloe. In full doses it is a stimulating cathartic, a vermifuge, and emmenagogue. It is useful in constipation, dyspepsia, amenorrhœa, hypochondriasis, jaundice. Administered by the rectum it is a vermifuge.

Solubility.—Water 75 per cent.

Vehicle.—In pill combined with nux vomica, scammony, iron. In a liquid form, with liquorice. Its purgative action is increased by the addition of bitter tonics.

The aqueous extract is the most active preparation.

It should not be given alone as it is apt to cause griping. Combined with soap or an alkaline salt its operation is quickened, and the tendency to rectal irritation avoided. It is contra-indicated in pregnancy. The aqueous extract may be used in hæmorrhoidal affections.

Dose of Pulvis Aloes Barbadosensis, 2 to 6 grains.

Extractum ———, $\frac{1}{2}$ to 6 grains.

Pilula ———, 5 to 10 grains.

Pilula Aloes et Ferri, 5 to 10 grains.

Enema Aloes Barbadosensis 10 grains.

* Aloin, a yellow crystalline substance obtained from aloes. Its reaction with nitric acid seems to indicate that it is a complex phenol. Alkalies, their carbonates, and soap, assist its solution. It is a drastic purgative.

Dose.—1 to 2 grains.

ALOE SOCOTRINA. *Socotrina Aloes**

The inspissated juice of the leaf of various species of Aloe (Nat. Ord. *Liliaceæ*), imported from Socotrina. It is less powerful than the Barbadoes Aloe. It is purgative, but slow in action, chiefly affecting the large intestine, and a powerful hepatic stimulant. In small doses it is stomachic and tonic. Administered by the rectum it is an anthelmintic. It is useful in constipation, dyspepsia, amenorrhœa, hypochondriasis, hepatic congestion, mesenteric disease, flatulency, ascarides, &c.

Solubility.—In water, 50 per cent.

Vehicle.—Extract of liquorice. In pill, combined with nux vomica, scammony, iron, &c. Its purgative action is increased by the addition of bitter tonics.

It should not be given alone, as it is apt to cause griping. Combined with soap or an alkaline salt it is less irritating to the rectum. The aqueous

extract and the compound decoction may be given in hæmorrhoids. It is contra-indicated in pregnancy.

The aqueous extract is a most active preparation.

Dose of Pulvis Aloes Socotrinæ, 2 to 6 grains.

Decoctum Aloes Compositum (Baume de Vie), $\frac{1}{2}$ to 2 ounces.

It is the most useful preparation of Aloes.

Extractum Aloes Socotrinæ, $\frac{1}{2}$ to 6 grains.

* ALUMINA. *Alumina*

Alumina, earth of alum, or argil, is the basis of clays, but medical use it is obtained from alum. It is chiefly pre-
pared in diarrhœa and dysentery of children, to whom it
is given in some mucilaginous liquid, to the extent of 30
ins or more, in the day : and to adults, in doses of 10 to
grains several times a day.

The *simple Sulphate of Alumina* is used to preserve animal
stances, and also in detergent and antiseptic lotions to
ulcers.

**ALUMINII CHLORIDUM. Chloride of Alumin*
"Chloralum"

A crystalline solid, which is largely employed as a febrifuge and deodorizer. It is sold both in the solid and in solution. The latter may be employed in the mouth and elsewhere in the same manner as the solution of chloride of zinc, over which it possesses the advantage of not being poisonous.

AMMONIÆ. Ammonia

A compound chiefly obtained from the liquor from gas. The purest form occurs as a by-product in the manufacture of borax. It is found in sea water, some volcanic products, putrid urine, and in decomposing animal matter.

AMMONIÆ ACETATIS LIQUOUR

Solution of Acetate of Ammonia. Mindererus Sp

A solution of carbonate of ammonia, acetic acid, and distilled water. It is diaphoretic, refrigerant, stimulant, discutient, rubefacient, and counter-irritant. It is used in febrile and inflammatory chest affections, dysentery, dropsy, and rheumatism. *Externally*, it is applied as a lotion to bruises and inflammations; and as a collyrium in chronic ophthalmia. It forms a good cooling lotion mixed with weak spirit.

Vehicle.—Camphor water and syrup of tolu.

Incompatibles.—Acids, potash, soda, lime water, salts of lead and

Dose.—2 to 6 drachms.

AMMONIÆ BENZOAS. *Benzoate of Ammonia*

It is prepared from a solution of ammonia, benzoic acid, and distilled water, and occurs in colourless laminar crystals. It acts more quickly than benzoic acid. It is diuretic, rendering the urine acid, and an hepatic stimulant. The ammonia does not pass through the kidneys. It is a valuable remedy in lithic and phosphatic deposits, catarrh of the bladder with alkaline urine, dropsy, gout with chalk-stone deposit.

Solubility.—1 in 5 of water, 1 in 18 of rectified spirit.

Vehicle.—Any aromatic infusion.

Incompatibles.—Liquor potassæ, acids, persalts of iron.

It is found as hippuric acid after passing through the kidneys.

Dose.—10 to 20 grains.

- 1 ℞ Ammon. Benzoatis, gr. x—xv.

AMMONIÆ CARBONAS. *Carbonate of Ammonia*

A translucent crystalline mass, volatile and pungent, sublimed from a mixture of chalk and sal ammoniac. It is antacid, expectorant, sudorific, stimulant, refrigerant, emetic. It is useful in acidity of the stomach, asthma, diabetes, pneumonia, croup, chorea, scarlet fever, smallpox,

measles, erysipelas, a valuable stimulant in from acute diseases, and in cardiac affections

Solubility.—1 in 4 of water, 1 in 5 of glycerine.

Vehicle.—In effervescing mixture, with syrup of orange juice; decoction of senega.

Incompatibles.—Acids, acidulous and earthy salts, lime. A tablespoonful of lemon juice or 17 grains of citric grains of carbonate of ammonia.

Dose of Ammoniae Carbonas, 8 to 10 grains; or as an Spiritus Ammoniae Aromaticus (Sal Volatile)

*Ammoniae Bicarbonas, 10 to 30 grains.

*Tinct. Ammoniae composita, 5 to 10 minims (the best form for an antacid).

AMMONIÆ NITRAS. *Nitrate of Ammonia*

A white crystalline salt, deliquescent, and of an acrid taste. Fused at a temperature of 350° to 450° F., it is resolved into nitrous oxide gas, &c. It is refrigerant and diuretic. It is not now administered medicinally. At one time it was used in slight inflammation of the mucous membranes, rheumatic fever, &c.

Solubility.—4 in 3 of water, 1 in 11 of spirit.

Vehicle.—Decoction of liquorice, water and syrup of ginger.

Equal parts of nitrate of ammonia, carbonate of soda, and water, form a powerful freezing mixture.

**Dose.*—3 to 20 grains.

AMMONIACUM. *Ammoniacum*

Ammoniac is the concrete juice from Dorema Ammoniacum (Nat. Ord. Umbelliferae), occurring in tears or

masses of a pale yellow colour. It is antispasmodic, d-
struent, diaphoretic, diuretic, emmenagogue, expector-
stimulant, discutient, and resolvent. It is chiefly given
an expectorant in affections of the chest unassociated
inflammation, and in visceral obstructions. *Externally*,
applied to indolent tumours.

Solubility.—Sparingly in water, forming a white emulsion.

Vehicle.—Mistura Ammoniaci. A few drops of essential oil of alm
added to the Ammoniacum before triturating it with water will disgui
a great extent, the odour and taste. It may be combined with fœtid
of ammonia.

Dose of Ammoniacum (gum-resin), 10 to 20 grains.

AMMONII BROMIDUM. *Bromide of Ammonium*

Occurs in small colourless crystals. It is analogous in its action to bromide of potassium, and is preferred to it by some Continental and English physicians. It is less lowering than the potassium salt. It is alterative, soporific, antispasmodic, anaphrodisiac, anæsthetic, anodyne, and absorbent. It is useful in nervous sleeplessness, hysteria, mania, sexual excitement, neuralgia, congestive headache, hooping-cough, prurigo. It allays pain and promotes absorption.

Solubility.—1 in 1½ of water, 1 in 18 of rectified spirit.

Vehicle.—The granular effervescing form. Lozenges (2 grains in each). Chloroform water with syrup of orange, or infusion of orange with syrup.

Incompatibles.—Acids and acidulous salts; spirits of nitrous ether.

Dose.—5 to 20 grains.

- 1 ℞ Ammon. Bromidi, ʒiiss.

In Hysteria.—*AMMONII CHLORIDUM. *Sal Ammoniac*

Chloride of Ammonium, Hydrochlorate or Muriate of Ammonia is prepared by sublimation, and occurs in colour-

less, translucent, inodorous fibrous masses. It is alt cholagogue, diaphoretic, diuretic, emmenagogue, refrigerant, stimulant, tonic, resolvent. It is useful in scrofulous, syphilitic glandular enlargements, hepatitis, portal rheumatism, chronic bronchitis, intermittent fevers, senile albuminoid degeneration, and facial neuralgia stimulates the secretions of the mucous membranes of the lungs and the intestinal glands. *Externally*, applied it removes corns and warts; and is a stimulant and solvent in bursæ and indolent tumours.

Solubility.—1 in 3 of water; 1 in 6 of glycerine; 1 in 56 of spirit.

Vehicle.—Syrup of lemon or tolu.; the liquid extract of liquorice with water; lozenges (2 grains in each).

Incompatibles.—Alkalies; alkaline earths and their carbonates; silver salts.

It must be administered with caution in persons of feeble constitution especially those subject to hæmorrhages.

Dose.—5 to 20 grains.

AMYGDALA AMARA. *Bitter Almond*

The seed of a variety of *Amygdalus Communis* (Nat. Ord. *Mygdalæ*), from Mogadore. In addition to the constituents of the sweet almond, it contains a peculiar principle, mygdalin, which produces with the action of Emulsin, when triturated with water, hydrocyanic acid and volatile oil of bitter almonds. By distillation with water, **Aqua Mygdalæ Amaræ* and **Oleum Essentiale Amygdalæ Amaræ* are obtained. The former contains a variable amount of prussic acid. **Misturæ Amygdalæ Amaræ* is prepared like **Mistura Amygdalæ*.

Ques *Amygdalæ Amaræ* is made of very different degrees of strength. The form is given for it in the British Pharmacopœia. The Prussian formula contains two thirds of a grain of pure prussic acid in an ounce. Dose, 10 to 30 drops, sometimes increased to 60. The United States pharmacopœial preparation contains *Ol. Amygdal. Amar.* mxxvj. Magnes. Carbon. ʒj. *Aque* stillat. Oij. Dose ʒss. **Mistura Amygdalæ Amaræ* is prepared like the *tura Amygdalæ*. Dose, $\frac{1}{2}$ to 1 $\frac{1}{2}$ oz.

℞ *Amygdalæ Dulc. excort.* ʒvj.

℞ *Ol. Essent. Amygd. Amaræ, gtt. xx.*

Sp. Vini Rectif. ʒiij [f ʒiv]. Misc.

From 10 to 30 drops, three times a day.

In Facial Neuralgia.—RADIUS.

AMYL NITRIS. *Nitrite of Amyl*

An ethereal liquid, of a yellowish colour and peculiar odour, produced by the action of nitric or nitrous acid on amyl alcohol. In the form of inhalation, it is antispasmodic and anodyne, and gives speedy relief in the paroxysms of asthma, angina pectoris, nervous headache. It is useful in epileptiform puerperal convulsions, in failure of respiration or the heart's action when employing an anæsthetic, in

the collapsed stage of cholera, in sea-sickness. A useful antidote to strychnia.

Solubility.—Freely soluble in ether, chloroform, rectified spirit.

Vehicle.—Glass capsules, containing in each 3 or 5 minims, to be broken in a handkerchief or in cotton wool.

Dose, by inhalation, the vapour of 2 to 5 minims, used with caution.

1 ℞. Amyl Nitris, ℥v—vj.

For Inhalation in Angina Pectoris.—Dr MURCHIE

AMYLUM. *Starch*

A product from wheat, occurring in white columnar masses. It is emollient, demulcent, slightly nutritive, absorbent. It is useful in the form of enema in irritated states of the rectum, dysentery, and the diarrhoea of typhoid fever. The powder is applied to the skin to absorb a secretion, to allay inflammation, and to prevent excoriation in infants. It is generally employed to stiffen lard. Violet powder is scented starch. Starch is an antidote to poisoning by Iodine. The fæcula or starch of potato, arrowroot, tous-les-mois, &c., have similar properties but are more frequently employed as articles of diet.

Dose of Pulvis Amyli, ad libitum.

Glycerinum Amyli.

Mucilago Amyli.

*Amylum Iodatum, 1 drachm, gradually increased.

1 ℞. Pulv. Amyli, ʒx.

Sodæ Carb. ʒj.

Misce: fiat pulvis, part. aff. applicandus.

In some Skin Diseases.—DEVEREUX

ANÆSTHETICS

For Inhalation

Bichloride of methylene, administered by Dr Junk's apparatus.

Chloroform, on lint or a handkerchief.

Chloroform ether, chloroform 2, ether 3, alcohol 1 part, on lint or Dr Ormsby's inhaler.

Ether, sp. gr. '720, by Mr Clover's apparatus.

The above are suitable for short or long operations.

Vitrous oxide gas, by Coxeter's apparatus. This gas is fully employed for short dental operations.

The result of collected statistics shows that there has been the least number of fatal cases where ether has been employed. It causes a free expectoration, and hence is irrisable for old people afflicted with bronchitis or asthma. bichloride of methylene is the most suitable of all the thesthetics for every age and long operations.

Medicinal

Mloral hydrate is a favourite in Obstetric practice. *romide of Potassium* is given to children before extract-a large tooth.

ANETHI FRUCTUS. *Dill Fruit*

he fruit of *Anethum Graveolens* (Nat. Ord. *Umbelli-*), cultivated in Britain or imported from the Conti-. It is aromatic, carminative, stimulant. It is useful in flatulent disorders of infancy, hiccough, &c., and as a vehicle or corrective of more active or less agreeable adies, especially to disguise the taste and to prevent griping effects of purgatives. The simple water is pre-ble for children.

icle.—The oil dissolved in spirit and diluted with water, or on a lump gar.

ss of *Aqua Anethi*, $\frac{1}{2}$ to 1 ounce.
Oleum —, 1 to 4 minims.

ANISI OLEUM. *Oil of Anise*

he oil from the fruit of *Pimpinella Anisum* (Nat. Ord. *Umbelliferae*), of Europe, or *Illicium Anisatum* Star Anise .: Ord. *Magnoliaceae*), of China. It is aromatic, carmi-ve, expectorant, stimulant. It is useful in flatulency, to diminish the griping effects of purgatives.

icle.—The oil dissolved in spirit and diluted with water, or on a lump gar.

ss of **Aqua Anisi*, 1 to 4 ounces.
Oleum —, 1 to 4 minims.
Essentia —, 10 to 20 minims.
**Spiritus* —, $\frac{1}{2}$ to 4 drachms. (1 part Oleum Anisi in 15 parts rectified spirit.)

*ANGELICA. *Garden Angelica*

The fruits and roots of *Angelica Archangelica* (Nat. Ord. *Umbelliferae* or *Apiaceae*). The roots retain their pungency the longer. It is carminative, stimulant, tonic. It is useful in dyspepsia, intermittent fever, atonic dropsy. It is principally used in the preparation of gin and a liquor known as "bitters."

Dose of Pulvis Angelicæ, 30 to 60 grains.

1 ℞. Pulv. rad. Angelicæ, ʒj.

ANTIMONIUM. *Antimony*

A brittle crystalline metal, of a silvery white colour, volatile at a white heat, and chiefly prepared from the black sulphide of antimony. Antimonium Metallicum (regulus or Metallic Antimony) was formerly cast into little pills to serve as *perpetual pills* for purgation.

ANTIMONII CHLORIDI LIQUOR. *Solution of Chloride of Antimony or Butter of Antimony*

A yellowish-red liquid prepared from sulphide of antimony dissolved in hydrochloric acid. See *Antimonium Nigrum*. It is caustic. *Externally*, it is applied to tumours, cancerous growths, &c. It causes but little pain or inflammation, and leaves a clean, healthy surface after separation of the scab.

ANTIMONII OXIDUM. *Oxide of Antimony*

A greyish-white powder, prepared from a solution of chloride of antimony with carbonate of soda. It is diaphoretic, but not so active as the tartrate. It is useful in cutaneous affections and chronic rheumatism.

Vehicle.—In pill.

Dose.—1 to 3 grains.

- 1 ℞ Antim. Oxidi, ʒiiss.
 Morphiæ Hydrochlor. gr. iiss.

PULVIS ANTIMONIALIS. *Antimony Powder.*

A white powder composed of oxide of antimony and phosphate of calcium. *James's Powder* is an analogous preparation, but with some unascertained difference of composition. It is alterative, diaphoretic, emetic, purgative.

Vehicle.—Wafer capsules, gelatine capsules, mucilage water, almond emulsion.

Dose.—2 to 6 grains; as an alterative, 1 to 3 grains; as a diaphoretic 3 to 8 grains; in larger doses, emetic and purgative.

- 1 ℞ Pulv. Antim. gr. xij.

ANTIMONIUM SULPHURATUM. *Sulphurated Antimony*

A Sulphide of Antimony, with some Oxide of Antimony. A bright orange powder, odourless, and with but a slight taste. It is alterative, diaphoretic, emetic. Its action uncertain, being dependent on the acidity of the stomach for its solubility. It is useful in chronic rheumatism, secondary syphilis, and cutaneous eruptions.

Solubility.—Insoluble in water. Readily in hydrochloric acid and caustic soda.

Vehicle.—In pill, with treacle.

Dose.—1 to 5 grains; as an emetic, 5 to 15 grains.

- 1 ℞ Antim. Sulphurati,

In Scrofula.—Dr DUNCAN.

ANTIMONIUM TARTARATUM. *Tartarated Antimony.* *Tartar Emetic*

Tartrate of Antimony and Potash occurs in colourless transparent crystals having triangular facets. It is the most reliable and generally used preparation of Antimony. It is diaphoretic, expectorant, emetic, febrifuge, a vascular depressant. It is useful in bronchitis, pneumonia, to increase the secretion of the mucous membranes and skin, in rigidity of the os uteri, and when the passages are dry and hot. *Externally*, it is a powerful emetic, irritant, and vesicant, causing a pustular eruption.

Solubility.—1 in 20 of water, 1 in 2 of boiling water, partially in proof spirit.

Vehicle.—Sweet almond emulsion, water and chamomile tea.

Incompatibles.—Astringent infusions, as bark, gallic and tannic acid; the alkalis and lead salts.

Antidotes.—Tannic acid, catechu, vegetable astringents.

When using the ointment to children, great caution must be exercised on account of the irritant properties of the drug, and its liability to be absorbed into the system.

Dose.—As a diaphoretic, $\frac{1}{4}$ to $\frac{1}{2}$ of a grain; as a depressant, $\frac{1}{2}$ to 1 grain; as an emetic, 1 to 2 grains.

*APOCYNUM CANNABINUM

The root of Apocynum Cannabinum (Nat. Ord. *cynacæ*), is known in America under the name of In Hemp. It must not, however, be confounded with Cann Indica. It is diaphoretic, diuretic, expectorant, catha emetic. It is useful in dropsy.

Dose of Pulvis Cannabini; as an emetic and carthartic, 15 to 30 gra.

Decoctum ——— radicis, 1 to 2 ounces.

Extractum ———, 3 to 4 grains.

- 1 ℞ Decocti Apocyni, f ʒxv.
 Syr. Aurantii, f ʒj. M.

Sumat cyathum vinosum bis terve die.

In Dropsy.

*APIOL. *Common Parsley*

A nearly colourless, non-volatile oily fluid, the ac principle of common parsley, *Petroselinum sativum* (Ord. *Umbelliferae*). It is antispasmodic, emmenago galactagogue, tonic.

Solubility.—In ether, chloroform, alcohol. Insoluble in water.

Vehicle.—Syrup, gelatine capsule.

Dose.—5 to 15 minims.

***ARAROA.** *Goa Powder. Chrysarobine*

A powder found in the clefts of the wood of a tree of the Nat. Ord. *Leguminosæ*, growing at Bahia. It contains 80 per cent. of Chrysophanic acid. It has been recommended as an application in ringworm and other cutaneous diseases.

See ACIDUM CHEYSOPHANICUM

ARECA. *Betel-nut Tree*

The seed of Areca Catechæ (Nat. Ord. *Palmaceæ*). It is anthelmintic, astringent, tonic. It is useful in tapeworm.

Vehicle.—In confection with syrup of orange or rose honey.

It is principally employed in dentifrice.

**Dose*.—4 to 6 drachms of the freshly ground seed.

***ARGEMONE MEXICANA.** *Mexican Prickly Poppy*

The juice and seeds of the yellow Mexican thistle, *Argemone Mexicana* (Nat. Ord. *Papaveraceæ*). The seeds are narcotic, and emetico-cathartic. The juice resembles Gamboge, and is a hydragogue. *Externally*, it is caustic. In the West Indies the seeds are used as a substitute for Ipecacuanha. The oil expressed from the seeds, in a dose of 30 drops, produces profound sleep, and afterwards acts on the bowels. It has been proposed as a remedy for cholera. The stalk contains a milky juice, which is applied to cancers, spots on the cornea, eruptions on the skin, and to repress unhealthy granulations.

1

℞ Sem. Argemonis Mexicanæ, ʒij.

Sacchari albi, ʒij.

Aquæ, f ʒviij.

In Dry Belly-ache.—Dr AFFLECK.

***ARGENTI CHLORIDUM.** *Chloride of Silver*

A white curdy precipitate produced on mixing a soluble silver salt with a soluble chloride. On heating it melts, and on cooling, becomes a greyish crystalline mass, which cuts

like horn. When found native in this state it constitutes the *horn-silver* of the mineralogist. It is less active than the cyanide. It is useful in epilepsy, syphilis, chronic dysentery, atonic dyspepsia, phthisis.

Solubility.—Readily in ammonia and in a solution of potassium cyanide.

Vehicle.—In gelatine capsule diluted with sugar of milk.

Dose.— $\frac{1}{2}$ to 5 grains; in epilepsy, 3 grains upwards.

1 ℞ Argenti Chloridi, gr. j.

In the early stage of Phthisis, and in Dyspepsia in debilitated habits. Dr NELIGAN.

*ARGENTI CYANIDUM. *Cyanide of Silver*

A white insoluble powder, prepared by distilling a solution of nitrate of silver and a solution of ferrocyanide of potassium with dilute sulphuric acid. It is supposed to combine the sedative action of cyanogen with the tonic of the metal. It is useful in syphilis.

Vehicle.—In pill, freshly prepared.

Dose.— $\frac{1}{16}$ to $\frac{1}{4}$ of a grain.

- 1 ℞ Argenti Cyanidi, gr. j.

In Syphilitic Ulcers.

*ARGENTI IODIDUM. *Iodide of Silver*

A pale yellow precipitate, produced by adding nitrate of silver to iodide of potassium. It is said to possess the same properties as nitrate of silver. Its protracted use does not, however, produce the slate-coloured discoloration of the nose—*macula argentea*—evoked by the nitrate. It is useful in gastralgia, pyrosis, chorea, epilepsy, syphilis.

Solubility.—Insoluble, or nearly so, in ammonia.

Preparation.—In pill, freshly prepared.

Dose.— $\frac{1}{4}$ to $\frac{1}{2}$ of a grain.

℞ Argenti Iodidi,

In Gastralgia, Pyrosis, Choreæ, &c.—Dr PATTERSON.

ARGENTI NITRAS. *Nitrate of Silver, Lunar Caustic*

It occurs in colourless prisms, or white cylindrical rods. It is alterative, antispasmodic, astringent, tonic, stimulant, caustic, escharotic. It is useful in epilepsy, chorea, cholera, hæmoptoe, hæmorrhages, gastralgia, typhoid fever, inflammation of the bowels, and in chronic gastric affections, hæmorrhage, and vomiting. *Externally*, it is applied in the form of points to ulcers, sore nipples, poisoned wounds, cancerous growths, and to arrest the superficial extension of scrofula, &c.; as an injection in affections of the mouth, nose, &c.; as a collyrium in gonorrhœal ophthalmia.

Solubility.—1 in 15 of rectified spirit.

Vehicle.—Pure silica or sugar of milk, and enclosed as a powdery capsule. In pill with tragacanth paste.

Incompatibles.—Astringent infusions, alkalies and their chlorides, all the acids except acetic and nitric, iodide of potassium of arsenic.

Antidote.—A solution of common salt in some demulcent drink. If administered for any considerable time it produces a blue hue discolouration of the skin, first indicated by a dark line on the gums. Acid tartrate of potash is said to remedy this. \S Iodidum.

The stains produced on the skin by nitrate of silver can be cyanide of potassium, or solution of iodide of potassium.

Dose.— $\frac{1}{2}$ to $\frac{1}{4}$ of a grain.

Strength of lotions, &c., 1 to 20 grains to the ounce of water to the object desired.

[One scruple of oxide, or half a scruple of cyanide of silver, to one of lard, has been used for syphilitic ulcers.]

ARGENTI OXIDUM. *Oxide of Silver.*

An olive brown powder, soluble in nitric acid. astringent, sedative, tonic. It differs from the nitric being less escharotic and in not staining the skin. useful in dyspepsia, painful affections of the stomach, gastrodynia, pyrosis, when the tongue is not red; in leucorrhœa, uterine hæmorrhage, in chronic diarrhœa of children. In obstinate relaxation of the bowels, the addition of a small portion of opium has been recommended.

Vehicle.—In pill with tragacanth paste.

Dose.— $\frac{1}{2}$ to 2 grains.

- 1 ℞ Argenti Oxidi, gr. ʒ.
Pulv. Tragac. co. gr. v.
Misce: fiat pulvis ter die sumendus.

In Passive Hæmorrhages, painful Dyspepsia, Chorea,

 In Obstinate Chronic Diarrhœa.—Dr TUNSTALL.
- 8 ℞ Oxidi Argenti, ʒj.
 Adep. Præpar. ʒj. Fiat unguentum.
 In Syphilitic Ulcers.

•ARGENTUM PURIFICATUM. *Pure Silver*

A white metallic metal, soft when pure. It is only officially employed to prepare nitrate of silver. Silver in fine powder has been used in frictions on the tongue as an antisyphilitic remedy. The chloride is said, however, to be more efficacious. It is soluble in nitric acid and precipitated by hydrochloric acid.

ARMORACIÆ RADIX. *Horseradish Root*

The fresh root of *Cochlearia Armoraciæ* (Nat. Ord. *Crucifera*). It resembles that of *Aconitum Napellus* or monkshood, and the substitution of the latter for it has caused fatal poisoning. It is stimulant, diaphoretic, sudorific, irritant, rubefacient, vesicant. It is useful in atonic dyspepsia, paralysis, dropsy, rheumatism, scurvy, hoarseness, in chest affections unattended with inflammation. It increases the secretions, especially the urine.

Vehicle.—The Compound Spirit in water.

It yields, on distillation with water, a volatile oil identical with that of mustard, and may be employed for the same purposes.

Dose of *Radix Armoraciæ, 30 to 60 grains.

Spiritus Armoraciæ comp., 1 to 3 drachms.

*Infusum ———, 1 to 2 ounces (contains mustard).

- 1 ℞. Rad. Armoraciæ, ʒij.

 Sp. Armoraciæ co. ʒiv.
 Tinct. Capsici, ʒij. Fiat gargarisma.

In Catarrhal Deafness, with enlarged Tonsils.

Dr FOSBROKE.

ARNICÆ RADIX. *Arnica Root*

The dried rhizome and rootlets of *Arnica Montana*, or Leopard's Bane (Nat. Ord. *Compositæ*). It is a cerebro-spinal stimulant, an irritant to the stomach and bowels, a supposed diuretic, diaphoretic, and emmenagogue. It is useful in amaurosis, paralysis, and other cerebral affections; the latter stage of hydrocephalus and typhus fever, and in

debilitated states of the system. *Externally*, it is applied in lotion for contusions, sprains, &c. It is said that erysipelas sometimes intervenes during its local application.

Antidote.—Opium, morphia.

Dose of Flor. Arnicae, 5 to 15 grains.

Rad. ———, 5 to 10 grains.

Tinctura Arnicae, 1 to 2 drachms.

*Infusum ———, 1 to 2 ounces. (Root, $\frac{1}{2}$ ounce; water, a pint.)

 Paint boil with a camel-hair brush.

An Abortive Treatment of Boils.—

*ARTEMISIA

Several species of *Artemisia* (Nat. Ord. *Compositæ*) are used in medicine.

Artemisia Absinthium. Common Wormwood. The dried ops are used as an aromatic bitter tonic and vermifuge; also as an antiperiodic and emmenagogue. Wormwood is employed in the preparation of some liqueurs, particularly that of "Absinthe," which is largely consumed in France. *Externally*, it is used in discutient and antiseptic fomentations.

Dose of Pulvis Absinthii, 20 to 30 grains.

Aqua ———, $\frac{1}{2}$ to 1 ounce.

Extractum ———, 5 to 20 grains.

Infusum ———, 1 to 2 ounces.

Oleum ———, 1 to 5 minims.

Tinctura ———, $\frac{1}{2}$ to 2 drachms.

Vinum ———, 2 or 3 tablespoonfuls twice or three times a day.

Artemisia Vulgaris. Mugwort. The fibrillæ and soft sound parts of the root, dried in the shade, and reduced to powder, or infused, have been recommended in epilepsy, infantile convulsions, chorea, hysteria, and amenorrhœa. The dose of the freshly powdered root is from 30 to 60 grains in 24 hours; or to children, a few grains, according to their age.

Artemisia Abrotanum. Southernwood. This has an aromatic smell; it is regarded as tonic, vermifuge, and antispasmodic; but is seldom used in this country, except in fomentations, and in washes to promote the growth of the hair.

Artemisia Santonica—Tartarian Southernwood—is supposed to yield Semen Contra, the worm-seed of the shops; which, however, consists of broken flower-buds and their stalks. Worm-seed is given in doses of 10 to 60 grains morning and evening for some days, followed by an active purge, as a remedy for round worms. The active principle, *Santonin*, is used for the same purpose.

A teaspoonful every half hour, gradually increasing the dose to spoonfuls.

In Infantile Convulsions.—KÖLL

***ASARUM.** *Asarabacca*

The root and leaves of *Asarum Europæum* (Nat. Ord. *ristolochiaceæ*) are acrid, emetic, cathartic, and sternutatory.

Use, as an emetic, 10 to 30 grains.

Asarum Canadense, Canada Snake-root, or Wild Ginger, tonic, diaphoretic, and an aromatic stimulant.

Dose of the powder, 20 to 30 grains. It does not usually prove emetic or cathartic.

***ASPARAGUS.** *Asparagus*

The root and shoots of *Asparagus Officinalis* (Nat. Ord. *liliaceæ*) are diuretic, aperient, and alterative or deobstruent; and allay inordinate action of the heart. They contain *asparagin*, on which these effects are supposed to end. After their exhibition the urine voided has a peculiar odour and colour. It is used chiefly in dropsy, consumption, and palpitations. The French Pharmacopœia contains infusion, a better preparation than the decoction here ordered, and also a syrup.

Use of Decoctum Asparagi, a teacupful three times a day.

℞ Decocti Asparagi, ℥xvj.
Potass. Acet. ℥j.
Mel. Scillæ, ʒss. Misco.

Sp. Ætheris Nit. ʒiiij.
Oxymel. Scillæ, ʒss. M.

To be taken as a common drink.

Diuretic and Cooling.—Dr COPLAND.

ASSAFŒTIDA. *Assafœtida*

An oleo-gum resin from the incised living root of *Narthex asafœtidæ* (Nat. Ord. *Umbelliferae*) imported from Bombay. It is antispasmodic, expectorant, moderately stimulant, and

slightly laxative. It is useful in hysterical affections, nervous debility, hypochondriasis, flatulent distension of the bowels, the cough of old persons, pertussis, asthma, and other affections of the chest not attended with inflammation. As an enema, it is recommended in flatulent diseases of children, convulsions, cholera, typhoid fever.

Vehicle.—The pill form of the B. P., to which may be added essential oil of almonds. The pills should be first varnished and then silvered. The Tincture with mucilage, spiritus ammoniæ aromaticus, tincture of hyocyamus and valerian.

The efficacy of Assafoetida is said to be due to the sulphur oil it contains.

Dose of Assafoetida, 5 to 20 grains.

Pilula Assafoetidæ comp. 5 to 10 grains.

Pilulæ Aloes et Assaf. 5 to 10 grains.

Tinctura Assafoetidæ, $\frac{1}{2}$ to 1 drachm.

Spiritus Ammoniacæ fetidus, $\frac{1}{2}$ to 1 drachm.

*Mistura Assafoetidæ, $\frac{1}{2}$ to 1 ounce (Assafoetida 2 drachms, water 10 ounces).

In Laryngismus Stridulus.—NIEMEYER.

ATROPIA. *Atropia*

An alkaloid obtained from Belladonna, occurring in colourless acicular crystals. It is an energetic poison, seldom given internally in this country. *Externally*, it is used to dilate the eye.

Solubility.—1 in 2 of alcohol, 1 in 8 of rectified spirit, 1 in 20 of ether, 1 in 50 of glycerine, 1 in 500 of water.

Antidotes.—As in poisoning by Belladonna.

Dose of Atropia, $\frac{1}{15}$ to $\frac{1}{10}$ of a grain.

Liquor Atropiæ, 1 minim.

Unguentum —.

- 1 ℞. Atropiæ, gr. $\frac{1}{2}$.
 Sacchari puri, ʒiiss. Misceantur optime.
 Give a grain and a half, two or three times a day, to a child of five years.
In Hooping-cough.—BÉUCHARDAT.

 Aquæ, ʒj.
 M. f. haustus, ter die sum.
In Irritable Cough with Weakness.—Dr H. JONES.

- ℞. Atropiæ, gr. $\frac{1}{15}$.
 Inf. Valerianæ, ʒiss.
 M. f. haustus, ter die sum.
For Drowsiness in the Daytime.—Dr H. JONES.

Its medicinal principle is highly volatile. It loses its acridity and activity when dried, and is used as a food. It was formerly given in humoral asthma, chronic rheumatism, jaundice, obstructions, &c.

Dose of the recently powdered root, from 10 to 30 grains.

- 1 ℞. Rad. Ari pulv. ʒj.
 Sem. Carui pulv. ʒss.
 Magnesie, ʒij. Misce.

A teaspoonful in the morning.

In Weakness of the Stomach in Gouty Constitutions.

NICOLAI.

AURANTII FLORIS AQUA. *Orange Flower Water*

The distilled water of the flowers of the bitter orange tree, *Citrus Bigaradia*, and of the sweet orange tree, *Citrus Arantium* (Nat. Ord. *Aurantiaceæ*), prepared in France. It is a mild tonic and somewhat antispasmodic. It is chiefly employed as a flavouring vehicle. The leaves are aromatic, tonic, and diaphoretic. The juice of the sweet orange is refrigerant, and is used for the same purposes as citric acid and lemon juice.

Dose of Aqua Aurantii Floris, $\frac{1}{2}$ to 1 ounce.

Syrupus ———, 1 to 2 drachms.

AURANTII CORTEX. *Bitter Orange Peel*

The fresh and dried outer part of the rind of the ripe fruit of the *Citrus Bigaradia* (Nat. Ord. *Aurantiaceæ*) imported from Europe. It is a mild bitter tonic, carminative, stomachic, and slightly astringent. It is much prescribed as an accompaniment to other medicines, particularly the stronger bitters, quinine, neutral salts, &c., to render them agreeable to the palate and stomach. Large quantities of the peel have proved fatal to children.

Dose of Infusum Aurantii, 1 to 2 ounces.

Infusum ——— comp. 1 to 2 ounces.

Syrupus ———, 1 to 2 drachms.

Tinctura ———, 1 to 2 drachms.

Tinctura ——— Recentis, 1 to 2 drachms.

Vinum ———, 1 to 2 ounces.

*AURUM. Gold

Pure gold is a soft metal, obtained from its by solution in nitro-hydrochloric acid and precip with a ferrous salt. It falls as a brown powde acquires its beautiful yellow lustre by friction. It solved by a mixture of nitric and hydrochloric acids, *Aqua Regia*. In a finely divided state it excites the tions, sometimes salivates and acts like its preparation in a milder degree, and without proving a local ir It is alterative and stimulant. *Externally*, it is u frictions on the tongue and gums. It is useful in s, scrofula, scirrhus and other cancerous affections, amenorrhœa.

Solubility.—Readily in a mixture of 1 of nitric and 2 of hydrochloric acid.

Vehicle.—Lycopodium, starch, syrup.

The different medicinal compounds of gold decompose readily, and are affected by exposure to light; hence they should be only dispensed when required, and kept secluded from the light.

Dose of Auri Pulvis, $\frac{1}{4}$ to 1 gr.

Unguentum Auri is applied to the surface from which the cuticle has been removed by a blister.

1 \mathcal{R} . Auri pulv. gr. vj.

Amyli pulv. gr. xxxvj.

Misce, et div. in partes xij. Sumat unam quarter die.

REICKE.

2 \mathcal{R} . Auri pulv.

Lycopodii (common Club Moss), ana gr. ij. Misce.

To be rubbed on the tongue and gums, in divided portions, during the day.

In Syphilis, &c.—REICKE.

3 \mathcal{R} . Auri pulv. gr. xv.

Axungiae, \mathcal{Z} ss. Misce.

To Obstinate Syphilitic Ulcers.—BOUCHARDAT.

*AURUM CHLORIDUM. *Chloride of Gold*

A red crystalline mass, very deliquescent, produced when gold is dissolved in nitro-hydrochloric acid. It is very poisonous, and is similar in action to corrosive sublimate. It is alterative and stimulant. *Externally*, it is used in friction on the tongue and gums, and also endermically. It is administered in the same cases as pure gold.

Solubility.—1 in 4 of water; also in ether, alcohol.

Vehicle.—In pill, lycopodium, syrup.

Dose of Auri Chloridum, $\frac{1}{10}$ to $\frac{1}{12}$ of a grain; in friction $\frac{1}{8}$ to $\frac{1}{4}$ of a grain.

1 \mathcal{R} . Auri Chloridi, gr. j.

Lycopodii præp. (common Club Moss), gr. xv. Misce,
et div. in p. xvj.

One to be rubbed on the tongue and gums daily. Afterwards, the same quantity to be divided successively into twelve and ten powders.

In Syphilis.—CHRESTIEN.

2 \mathcal{R} . Auri Chloridi, gr. j.

Ext. Aconiti, \mathcal{Z} ss.

Pulv. Glycyrrhizæ, \mathcal{Z} ij.

Syrupi, q. s.

Misce intimo, et div. in pil. xx, quarum sumatur una ter in die.

In Secondary Syphilis, with much pain.—DR NELIGAN.

***AURI CYANIDUM.** *Cyanide of Gold*

A yellowish-white and insoluble powder, freely dissolved by solution of potassium cyanide. It is alterative and splan-
tant. It is administered in the same cases as pure gold.

Dose of Auri Cyanidum, gr. $\frac{1}{12}$ to $\frac{1}{10}$.

- 1 ℞ Auri Cyanidi, gr. j.
 Lycopodii (common Club Moss), gr. xv. Misce,
 in pulv. xvj.
 One daily in frictions on the tongue.

„ Hot . .	98° to 112° ...	115° to 114° ...	120° to 137°

Gelatine Bath.—Gelatine, 12 to 24 ounces, dissolved in heat in a quart of water, and the solution added to the bath.

In Contagious Diseases

Nitric Acid Bath.—Acid 6 ounces, Water 2 gallons, 96° to 98° F.

In Hepatic Affections

Sulphur Bath.—Sulphuretted Potash, 4 ounces, Water 30 gallons.

In Lead Poisoning

*BALSAMUM DIPTEROCARPI

Gurjun Balsam. Wood Oil

An oleo-resinous substance collected by incisions from the trunk of *Dipterocarpus lœvis* and other species (Nat. O. *Dipteraceæ*) from the East Indies. In its properties Gurjun Balsam resembles Copaiba and is employed in similar cases. It is said to be very efficacious in leprosy. It has been applied in cutaneous affections, as eczema.

BALSAMUM PERUVIANUM. *Balsam of Peru*

A reddish-brown or nearly black liquid, having a characteristic odour and bitter taste, obtained from the trunk of the *Myroxylon Pereiræ* (Nat. Ord. *Leguminosæ*) after the bark has been scorched and removed. It is stimulant and expectorant, acting especially on the mucous membranes. It is useful in chronic catarrh, asthma, and other non-inflammatory affections of the chest attended with debility; chronic rheumatism, amenorrhœa, and to restrain excessive discharges, as gleet, leucorrhœa, &c. *Externally*, it is a stimulant to unhealthy ulcers, chilblains, sore nipples, and promotes the growth of the hair.

Solubility.—In equal parts of rectified spirit.

Vehicle.—Sugar and yolk of egg. Mucilage.

It contains benzoic and cinnamic acids, both of which are antiseptic.

Dose.—10 to 15 grains.

- 1 ℞ Bals. Peruviani, ℥iv.

 A teaspoonful thrice daily, directly after food—for a child two years old.
In Eczema.—Sir ERASMUS WILSON.

*BARI CHLORIDUM. *Chloride of Barium*

Flat rectangular white crystals of acid and disagreeable taste, prepared by acting on native Carbonate of Baryta by means of hydrochloric acid and heat. It is alterative and a nervine tonic, but is rarely given internally. It has been chiefly used in affections of the glandular system, scrofula, chronic dysentery and diarrhoea, cancer, and cutaneous diseases. All the soluble salts of barium are very poisonous. The only official preparation is the Liquor Barii Chloridi. It is employed to detect the presence of Sulphuric Acid or Sulphates in solution.

Solubility.—Freely in water, 1 in 10 of glycerine.

Vehicle.—In solution, in ʒ or ʒ of water with 1 of glycerine. In water, with syrup of orange or tolu. In pill, with sugar of milk in glycerine of tragacanth or confection of roses.

Antidote.—Sulphate of magnesia or soda, dilute sulphuric acid,

Dose.—1 to 2 grains,

- 1 ℞ Solut. Barii Chloridi sat. ℥j.
 Acidi Hydrochlor. miv. Misce.

Begin with 3 or 4 drops, and gradually increase the dose to 10 drops twice a day.

In Scrofulous and Cancerous Affections.—Dr CRAWFORD.

- 2 ℞ Barii Chloridi, ʒss.
 Aque destil. ℥j. Misce.

Give daily, to a child of 3 years, from 5 to 20 drops; to older children from 10 to 30 drops; increasing the dose to 50 or 60. [WENDT says from 5 to 15 drops every three hours.]

In Scrofula.—HUFELAND.

- 3 ℞ Barii Chloridi, ʒss.
 Tinct. Ferri Perchlor. f ʒij.
 Syr. Aurantii, f ʒij.
 Aque destil. f ʒviij. M.

Give from half an ounce to an ounce three times a day.

In Scrofula, with languid Circulation and Debility.

Mr BALMAN.

- 4 ℞ Barii Chloridi, gr. j.
 Morphiæ Hydrochlor. gr. iij.
 Conf. Rosæ, q. s.

Fiant pilulæ xij. Sumat unam ter die.

In Chronic Diarrhœa and Dysentery.—Dr A. WALSH.

*BARIUM IODIDUM. *Iodide of Barium*

It has been given in scrofulous and similar morbid conditions.

Solubility.—Freely in water.

Dose.— $\frac{1}{4}$ of a grain.

- 1 ℞ Barii Iodidi, gr. j.
 Cinnamomi pulv.
 Sacchari albi, ana ʒiv.

Misce, et div. in partes viij æquales. One to be taken three times a day.

In Scrofulous Diseases.—RADIUS.

BEBERIÆ SULPHAS. *Sulphate of Beberia*

Occurs in dark-brown translucent scales, which, when broken up, yield a yellow powder of a strong bitter taste; the sulphate of an alkaloid derived from the bark of the green-heart tree—*Nectandra Rodiæi* (Nat. Ord. *Lauraceæ*). It is astringent, antiperiodic, febrifuge, tonic. An imperfect substitute for Quinine. It is given in menorrhagia, intermittent headache, neuralgia, fevers.

Solubility.—1 in 80 of cold water. Much more readily if the water be slightly acidulated with sulphuric acid. Freely in alcohol.

Vehicle.—In pill with confection of roses. Water or chloroform water solution. By the addition of one minim of Acid. Sulph. Dil. to one grain of the salt a bright red mixture is obtained. Syrup of orange or lemon may be added as a flavouring agent.

Incompatibles.—Astringent infusions and tinctures, alkalies and their carbonates, lime water, bromide or iodide of potassium.

Dose.—1 to 3 grains, as a tonic; 5 to 10 grains, as an antiperiodic.

1 ℞. Bebeerinæ Sulphatis, gr. xxxvj.

Conf. Rosæ, q. s.

Fiat massa in pil. xij dividenda. One pill to be taken three times a day during the intermissions.

In Intermittent Headache.—Dr GAIRDNER.

2 ℞. Bebeerinæ Sulphat. ʒij.

In Periodic Headache and Neuralgia.—Dr NELIGAN.

4 ℞. Bebeerinæ Sulph. ʒss.

Acid. Sulph. dil. ℥xxv.

Syr. simplicis, f ʒj.

Tinct. Aurantii, f ʒj.

Aquæ f ʒiv. Misce.

A tablespoonful three times a day.

Sir R. CHRISTISON.

5 ℞. Beberinæ Sulphatis, gr. xx.

Inf. Chiratz, ʒvj.

Solve. (One sixth for a dose.)

Tonic.—Dr GUY.

BELÆ FRUCTUS. *Bael Fruit*

The dried half-ripe fruit of *Egle Marmelos* or Bengal Quince (Nat. Ord. *Aurantiaceæ*). It is astringent. It is especially used in dysentery, diarrhoea, irritations of the mucous membranes, and to obviate costiveness arising from debility. A decoction of the *root* is used in Malabar for hypochondriasis, melancholia, and palpitation; and of the *leaves*, for asthma.

Vehicle.—The extract in pill.

Dose of Extractum Bellæ Liquidum, 1 to 2 drachms.

*Confectio ———, 1 drachm (Squire).

1

℞. Fruct. immaturi Bellæ, ʒij.

Aquæ, Oj. Coque lentè ad f ʒv, et cola.

Sit dosis, f ʒj ad f ʒiiss bis terve die, vel quaque tertia horâ.

In Dysentery and Diarrhœa.—Mr.

2

℞. Ext. Bellæ liquidi, ʒij.

M. Sum. post sing. sedes liquidas.

In Diarrhœa, &c.

BELLADONNA. *Deadly Nightshade*

The fresh leaves and branches carefully dried of *Belladonna* (Nat. Ord. *Atropaceæ*). It is a powerful narcotic, and in some cases acts as a diaphoretic, and laxative. It is useful in neuralgia, chorea, epilepsy, whooping-cough, tic douloureux, rheumatism, dysmenstrua, typhoid fever; spasm of the sphincter of the uterus, hæmorrhoids; in habitual constipation, nocturnal emission, and incontinence of urine. *Externally*, it is used to relieve neuralgia. The Emplastrum is applied in threatening pleurisy, mastitis, abscess, &c. Its administration must be suspended in dryness and stricture of the fauces, impaired vision, dilatation of the pupils intervene. The external application of Belladonna sometimes produces a characteristic erythematous rash.

Vehicle.—The Extract in pill, the Tincture and Juice in camphor.

Incompatibles.—Opium, strychnia, caustic alkalies.

Antidote.—An emetic of sulphate of copper 10 grains, and atropine; chloral hydrate; pilocarpine.

Dose of Pulvis Belladonnæ, 1 to 2 grains.

Extractum ——— $\frac{1}{2}$ to $\frac{1}{4}$ grain, increased to 1 or 2 grains.

Succus ——— 5 to 15 minims.

Tinctura ——— 5 to 20 minims.

Emplastrum ———

Unguentum ———

Linimentum ——— (from root).

*Chloroform Belladonnæ.

BENZOINUM. *Benzoin*

samic resin of *Styrax Benzoin* (Nat. Ord. *Styracææ*),
 in agglutinated tears or a compact rich brown
 ported from Sumatra, &c. It is stimulant, expec-

torant, styptic. Its vapour is antiseptic and deodorant is useful in chronic pulmonary affections. *Externally* applied to cuts, wounds, chronic ulcers. Benzoïn property of preventing ointments turning rancid an ingredient in cosmetic washes; in balsamic tincture applied to wounds; in aromatic or fumigating pastes in court or black sticking plaster.

Solubility.—In rectified spirit, or solution of potash.

Vehicle.—The Compound Tincture in mistura amygdalæ, or a solution of acacia and oil of almonds. The inhalation of the Compound in water at 140° F. in a suitable vessel.

Dose of Benzoïn, 10 to 30 grains.

Tinctura Benzoïni comp., $\frac{1}{2}$ to 1 drachm. This is Friar's Balsam.

*Unguentum Benzoïni (U.S.).

*Tinctura ————— (Benzoïn 1, Rectified Sp. 10, distilled).

*Lotio ————— (Tinct. Benzoïni 1, Rose Water cooling application to the face).

 To be added to a pint of water at 150° F., and inhaled for
 minutes every four or six hours from a suitable inhaler.

In Acute Congestion of the Pharynx and Larynx.

Dr MORELL M.A.

See ACIDUM BENZOICUM AND ADEPS BENZOÏNI.

***BERBERIS.** *Barberry Bark and Fruit*

The fruit and the bark of the root of the Common Barberry, *Berberis Vulgaris* (Nat. Ord. *Berberidaceæ*). Berberine is the active principle of the bark. The bark is tonic and deobstruent. The fruit is antiscorbutic, astringent, febrifuge, and contains oxalic and citric acid. Berberine is tonic and laxative. The *bark* is useful in jaundice and dysentery; the *fruit* in scurvy, bilious disorders, and fevers; the active principle, *Berberine*, in dyspepsia, constipation, functional derangements of the liver, the convalescence of typhus, cholera, &c. An extract from the woods or roots of various species of *Berberis* is used in India in affections of the eye under the name of Rusot or Ruswat. Berberine is freely soluble in water; its salts less so.

Solubility.—Pure Berberine is soluble in 100 parts of water; much more soluble in boiling water.

Vehicle.—The bark may be administered in the form of decoction or infusion (1 ounce to pint) or as a tincture.

Dose of Decoction Berberidis, 1 ounce.

Infusion ———, 1 ounce.

Tinctura ———, 1 to 2 drachms.

Berberina, 2 to 10 grains: larger doses act as a purgative.

In Fevers, &c.

***BETULA ALBA.** *Common European Birch*

The bark of *Betula Alba* (Nat. Ord. *Betulaceæ*) yields a kind of oil, which gives the peculiar odour to Russia leather. The oil has been found useful in cases of eczema.

BISMUTHUM PURIFICATUM. *Purified Bismuth*

A crystalline metal of a greyish-white colour. When submitted to the action of nitric acid and distilled water, and subsequently decomposed by the addition of water, it yields a white precipitate. It is used in the preparations of bismuth.

BISMUTHI CARBONAS. *Carbonate of Bismuth*

A white powder. It is similar to the Subnitrate and is often preferred to it.

Solubility.—Insoluble in water, soluble with effervescence in nitric acid
Vehicle.—Water or chloroform water with tragacanth as a suspender.
 Wafer capsules. Gentian mixture.

Dose.—5 to 10 grains.

1 ℞ Bismuthi Carb. gr. x.
 Acidi Gallici, gr. x.
 Tinct. Camph. co. ʒss.
 Pulv. Tragacanth. co. gr. x.
 Sp. Chloroformi, mʒ.
 Inf. Guarantii, ad ʒiiss. Misce.

To be taken three times a day.

In Subinvolution of the Uterus with Hemorrhage.

Dr R. GREENHALGH.

BISMUTHI OXIDUM. *Oxide of Bismuth*

A dull straw-yellow powder prepared from the subnitrate by boiling with solution of caustic potash. It is used in the same way and for the same purposes as the Subnitrate.

Vehicle.—Wafer capsules, gentian mixture.

Dose.—5 to 15 grains.

BISMUTHI SUBNITRAS

A heavy white powder in crystalline scales, prepared from the normal nitrate by decomposition with water. It is antispasmodic, tonic, sedative. It is useful in painful affections of the stomach, gastralgia, cardialgia, pyrosis; chronic vomiting, whether functional or due to gastric ulceration; the diarrhoea of typhoid and phthisis. *Externally*, in some skin affections, and as an injection in gleet and leucorrhœa.

Solubility.—Insoluble in water. Dissolved by nitric acid in distilled water without effervescence.

Vehicle.—Wafer capsules. Suspended by acaciæ or tragacanth in water or chloroform water, gentian mixture.

Incompatibles.—Potash, soda, ammonia, and their carbonates.

Dose of Bismuthi Subnitras, 5 to 15 grains.

Liquor Bismuthi et Ammoniac Citratis, $\frac{1}{2}$ to 1 drachm.

Trochisci Bismuthi, 2 or more.

*Liquor Bismuthi (Schacht), 1 drachm.

*Unguentum Bismuthi (Bismuth Subnit. 1, Adeps præp. 4).

***BOLDO**

The leaves and young twigs of *Boldoa fragrans* (Nat. Ord. *Monimiaceæ*) of Chili. Its virtue is due to an alkaloid Boldine and a volatile oil in the leaves. It is stimulant and stomachic. It is useful in liver complaints, dyspepsia, and atony of the stomach.

Vehicle.—In a bitter infusion.

Dose of Tinctura Boldo, 10 to 30 minims.

- 1 ℞. Tinct. Boldo, ʒss.
 Inf. Calumbæ; ad ʒj. M. ft. haustus.

In Dyspepsia.—*

BORAX. *Sodæ Biboras*

A salt occurring in colourless, transparent crystals, from India. It is antacid, antilithic, diuretic, refrigerant, emmenagogue, sedative. It acts on the alimentary canal as a mild antacid, rendering the fluids alkaline. It causes contraction of the uterus. *Externally*, it is sedative to the mucous membranes, and is applied in apthous affections of the mouth and throat, mercurial salivation, skin diseases,

sore nipples, and irritable conditions of the vagina and uterus.

Solubility.—1 in 2 of boiling water, 1 in 1 of glycerine. Insoluble in rectified spirit.

Vehicle.—Infusion of orange; water, with fluid extract of liquorice; chloroform water; Wyeth's compressed tablets.

Incompatibles.—Mucilage of Acacia, mineral acids.

Dose of Sodæ Bioras (Borax), 5 to 30 grains.

Glycerinum Boracis, $\frac{1}{4}$ to 1 $\frac{1}{4}$ drachms.

Mel ——— (applied externally).

*Tinct. Myrrhæ et Boracis (Myrrh 1, Eau de Cologne 16, Borax 1, Water 3, Syrup 3), for teeth and gums.

BROMUM. *Bromine*

A dark-brownish volatile liquid with a disagreeable odour, obtained from sea-water and some saline springs. It is chiefly used as a topical application in uterine cancer.

Solubility.—1 in 30 of water. By the addition of an alkaline bromide, a much stronger aqueous solution may be obtained.

Vehicle.—Chloroform water with syrup of orange. Infusion of orange with syrup.

It is much used in the form of bromide of potassium and bromide of ammonium.

1 ℞ Bromi (pond.) ʒj.

Aque destil. ʒv.

Agita simul ut fiat solutio. Dose, from three to six drops in sugared water.

*BRYONY. *Common Black Bryony*

The fleshy root of *Tamus Communis* (Nat. Ord. *Dioscoreaceæ*), when fresh, possesses considerable acidity. It is diuretic, cathartic, emetic, emollient. It is a popular remedy amongst country folks as a stomachic. *Externally*, it is applied as a poultice to bruised parts to remove any marks.

The young shoots, thoroughly boiled, have been eaten like asparagus.

Dose of the decoction 1 to 2 ounces.

BUCHU FOLIA. *Buchu Leaves*

The dried leaves of *Barosma betulina*, *crenulata*, *serratifolia* (Nat. Ord. *Rutaceæ*). Buchu is aromatic, antispasmodic, diaphoretic, diuretic, stimulant, tonic. It has a

special action on the mucous membrane of the bladder, restraining mucous discharges, and allaying any irritability. It is useful in dyspepsia, chronic rheumatism, dropsies, cutaneous affections, diseases of the prostate, retention and incontinence of urine. *Externally*, the powdered leaves are used by the Hottentots as a vulnerary. The Tincture has been used to relieve local pains.

Vehicle.—The Infusion, which should be freshly prepared, and from the *betulina* variety, with the addition of the Tincture; syrup of tolu should be added to make the mixture more palatable. Peppermint water.

Dose of Pulvis Buchu, 20 to 40 grains.
Tinctura —, 1 to 2 drachms.

***BYNE. Malt**

A preparation of malt, known as Extract of Malt, is now largely administered in cases of defective nutrition of all ages; in debility from any cause, whether functional or organic; the convalescence of fevers, and many lowering diseases.

It is best given after a meal. At first once a day, and afterwards increased to three times a day.

CADINUM OLEUM, Oil of Cade

Is a more elegant production than Common Tar, which it resembles in its medicinal properties. It is prepared chiefly at Aix la Chapelle, by the dry distillation of the wood of *Juniperus Oxycedrus* (Nat. Ord. *Coniferae*). It is principally used in veterinary medicine.

℞. Ol. Cadini,
Saponis mollis,
Sp. Rectif. aa ʒi.
Ol. Lavandulæ, ʒiiss.

Misce. (Rub a little firmly over the eruption night and morning, and wash it off before each reapplication.)

In Eczema.—Dr ANDERSON.

CADMII IODIDUM. Iodide of Cadmium

A flat, white, pearly crystal; may be formed by direct combination of iodine and cadmium in the presence of water. It is not administered internally. In the form of ointment it is a mild stimulant, alterative, resolvent. It has been applied to enlarged scrofulous joints. It is preferable to the iodide of lead, as it does not stain the skin.

Solubility.—1 in 2 of water and of glycerine; 1 in 3 of rectified spirit.
Unguentum Cadmii Iodidi.

***CADMII SULPHAS. Sulphate of Cadmium**

A crystalline, resembling in appearance Sulphate of Zinc. It is obtained by dissolving the oxide or carbonate in dilute sulphuric acid. In large doses, it is emetic. *Externally*, it

is astringent and irritant, and may be employed in cases as sulphate of zinc; its action is, however, more powerful. It is said to be an antisypilitic remedy

Solubility.—1 in 2 of water.

Vehicle.—Sugar of milk, the powder enclosed in wafer capsulation of barley or liquorice root.

Dose.—1 to 2 grains.

- 1 ℞ Cadmii Sulphat. gr. vj.
 Sacchari albi, ʒss.

 A tablespoonful every hour or two, as required.
 In Hemicrania, &

CAJUPUTI OLEUM. *Oil of Cajuput*

A pale bluish-green coloured oil distilled from the leaves of *Melaleuca minor* (Nat Ord. *Myrtaceæ*), volatile, with an agreeable odour and aromatic taste. It is a diffusible stimulant, antispasmodic, carminative, sudorific, anodyne. It is useful in hysteria, flatulent colic, spasms of the stomach, chronic rheumatism, dropsy, low fevers. *Externally* it is applied to relieve the pains of toothache, rheumatism, and gout.

Solubility.—Entirely in alcohol.

Vehicle.—In emulsion with acaciæ or tragacanth and syrup.

Dose of Oleum Cajuputi, 1 to 3 minims.

Spiritus ———, 50 to 100 minims.

- 1 ℞ Ol. Cajuputi, ʒj.

 TORTUAL.

*CALAMUS. *Sweet Flag*

The root of *Acorus Calamus* (Nat. Ord. *Acoraceæ*). Its preparations are chiefly used as adjuncts to other stimulants and to the bitter tonics. It is an aromatic stimulant and stomachic. It is useful in atony of the stomach, indigestion in gouty subjects, asthenic fevers attended with weakness of the digestive organs, and ague. *Externally*, it is employed in stimulating baths and lotions. The volatile oil is used in the preparation of aromatic vinegar.

Dose of Pulvis Calami, 15 to 40 grains.

Infusum —, 1 to 2 ounces (Calamus 2 ounces, Spirit 12 fluid ounces).

Tinctura —, 1 to 2 drachms (Calamus 1 ounce, Water 1 pint).

- 1 ℞ Inf. Acori Calami, ʒij.
 Acaciæ pulv. ʒj.
 Sacchari albi, ʒij. Misce.
 A teaspoonful every two hours. [For children.]

In Dyspepsia and Asthenic Diarrhœa.—WENDT.

- 2 ℞ Inf. Acori Calami, ʒiiss.
 Quin. Sulph. gr. ij.
 Tinct. Cinnamomi, f ʒj.
 Fiat haustus sexta quaque hora sumendus.

In Flatulent Dyspepsia.—MR BRANDE.

CALCII CHLORIDUM. *Chloride of Calcium*

A whitish crystalline semi-transparent mass or fragment, with a bitter acrid saline taste; deliquescent. It is alterative, deobstruent, tonic. It is useful in bronchocele and other glandular affections, scrofula, and some forms of vomiting. It is specially introduced on account of its power of absorbing water.

Solubility.—1 in 1 of water, 1 in 2 of rectified spirits.

Vehicle.—Decoction of liquorice root, decoction of barley, milk.

Dose of Calcii Chloridum, 10 to 20 grains.

*Liquor Calcii Chloridi, 30 minims (Dried Chloride 2 oz., Distilled Water, 8 oz.).

- 1 ℞ Liq. Calcii Chloridi, mxx ad xxv.
 Aque Camphoræ, f ʒx.
 Tinct. Camphoræ co. f ʒiiss.

Fiat haustus ter die sumendus.

DR COPLAND.

- 2 ℞ Chloridi Calcii, ʒj.
 Aque destil. ʒiiss.
 Misce: capiat cochl. parvum bis terve die, ex lacte.

In Scrofula.—MR B. PHILLIPS.

- 3 ℞ Calcii Chloridi cryst. ʒiv.
 Aque destil. ʒxvj. Misce.
 A teaspoonful three or four times a day [in barley-water or liquorice-tea].

In Chronic Eczema.—M. CAZENAVE.

- 4 ℞ Calcii Chloridi, ʒj.
 Ext. Hyoscyami, ʒss.
 Aque destil. ʒvj.
 Syr. Glycyrrhizæ, ʒj. Misce.

A spoonful to be taken four times a day.

In Scrofulous Consumption.—DR BEDDOES.

- 5 ℞ Calcii Chloridi, ʒj.
 Ext. Conii, gr. xv.
 Aque Cinnamomi, ʒss. Solve.

Give eight to sixteen drops, three times a day, to a child ten years old, shaking the bottle.

In Scrofula.—PHLEGBUS.

In Scrofulous and White Swellings.—SWEDIAUR.

CALCIS CARBONAS PRÆCIPITATA

Precipitated Carbonate of Lime

A white crystalline powder, prepared from chloride of calcium, carbonate of soda, and boiling water. It is antacid, astringent.

Solubility.—Insoluble in water.

Vehicle.—In powder, Mistura Cretæ.

Dose.—10 to 100 grains.

CALCIS HYDRAS. *Slaked Lime*

A white, strongly alkaline and caustic powder of recently prepared lime slaked with water. It is alterative, antacid, astringent, caustic, and desiccative. It is useful in diarrhoea, vomiting, heartburn, other irritations of the stomach and bowels from acidity, rachitis, and some calculous affections. From its solvent power on the mucus of the intestines, it is given to dislodge worms. *Externally*, it is applied in ring-worm of the scalp, some cutaneous affections, foul ulcers, and as an injection in leucorrhœa. The Liniment is most valuable in scalds and burns, and is popularly known as *Carron Oil*. Added to new milk it enables a milk diet to be tolerated, when the stomach would not otherwise bear it. Milk is also added to lime-water to render it more palatable.

Vehicle.—Fresh milk. Mistura Amygdalæ.

Incompatibles.—Vegetable and mineral acids, alkaline and metallic salts.

Dose of Liquor Calcis, $\frac{1}{2}$ to 2 ounces.

Liquor Calcis Saccharatus, 15 to 60 minims.

Linimentum Calcis.

- 1 ℞. Liq. Calcis,
 Lactis recentis, āā ʒx. Misce.
To be taken daily.

In Pyelitis.—OPPOLZER.

An Antacid and Carminative.—DR DRUITT.
- 9 ℞. Liniment. Calcis, ʒj.
 Liq. Ammoniac, ʒj. M. Ft. linimentum.

For Freckles.—*

CALCIS HYPOPHOSPHIS. *Hypophosphite of Lime*

A white crystalline salt, with a pearly lustre, and a bitter, nauseous taste. It is alterative. It is useful in phthisis, general debility, nervous states of the system, rachitis.

Solubility.—1 in 6 of water. Insoluble in spirit.

Vehicle.—Milk. Decoction of liquorice root.

Substitutes.—Dr. F. Churchill's Syrup. Fellow's Syrup.

Dose of Calcis Hypophosphitis, 5 to 10 grains.

- 1 ℞ Calcis Hypophosphitis, gr. iij.
 Liq. Calc. Sacchar. ℥xij.
 Syr. Aurantii, 3ss.
 Aque Menth. pip. ad ʒj.

Fiat haust. ter die sum.

In Phthisis.—Dr THOROWGOOD.

CALCIS PHOSPHAS. *Phosphate of Lime*

A light white amorphous powder, prepared from bone ash submitted to the action of hydrochloric acid and ammonia. It is alterative and antacid. It is useful in rickets, mollities ossium, scrofula, diarrhoea, ulcerations and excoriations of the skin and bowels, marasmus of children. It promotes the cicatrization of ulcers, and the union of fractures when there is a deficient secretion of the phosphate of lime. Phosphate of lime, in the form of burnt hartshorn, was formerly used in medicine under the name of Sydenham's *Decoctum Album*.

Solubility.—Insoluble in water.

Vehicle.—Milk, diluted with sugar of milk as a powder, sweetened water with powdered gum acacia to suspend.

Substitutes.—Parrish's Syrup; Dusart's Syrup of the Lactophosphate of Lime.

Dose.—10 to 40 grains.

- 1 ℞ Calcis Phosphat. præcip. ʒiv.
 Acacis pulv. ʒij. Misce.

Dose, for children, three or four grains; for adults, six to nine grains, three times a day, at meal times.

[As a substitute for Mistura Cornu Cervi.]

- 2 ℞ Calcis Phosphat. præcip. gr. iv—vj.
 Mist. Cretæ, ʒj. Fiat haustus ter die sumendus.

For children, give a fourth part.

In Diarrhœa with Emaciation and Acidity.

- 3 ℞ Pulv. Calcis Phosph. gr. xv.
 Bismuthi Subnit. gr. xv.
 Pulv. Sacchari, gr. lxxv.
 M. div. in chartulas v. Sumat j inter cibos nocte maneque.

In Chronic Diarrhœa of Children.

TEOUSSEAU and REVEIL.

*CALCIUM SULPHIDE

A greyish powder of an offensive odour, giving off sulphurated hydrogen in contact with water. It is obtained by reducing the sulphate, at a high temperature with charcoal or hydrogen. It is a valuable remedy in threatened or active suppurative affections of the glandular system.

Solubility.—But slightly in water.

Vehicle.—Diluted with milk of sugar or made into a pill with glycerine of tragacanth and coated with gelatine.

Dose.— $\frac{1}{10}$ of a grain.

- 1 ℞ Calcii Sulphid. gr. j.
 Sacchar. Lactis, gr. x. Misce : fiat pul. x.
 One powder every hour or two.

In Indurated Glands following Scarlet Fever.

Dr S. RINGER.

- 2 ℞ Calcii Sulphid. gr. j.
 Aque, ℥x. Misce.
 A teaspoonful every hour.

In Scrofulous and Tuberculous Glands.—Dr S. RINGER.

*CALCI SULPHURETUM. *Calc Sulphurata* *Sulphurated Calcium*

Impure sulphide of calcium, unstable and uncertain in its composition, but probably containing sulphides of calcium with hyposulphite and perhaps other oxysulpho-compounds. It is alterative, diaphoretic, stimulant. It is sometimes prescribed in skin diseases, gout, and chronic rheumatism. In doses of 20 grains it is said to be an antidote to metallic poisons. Its chief use is to form sulphur baths.

- 1 ℞ Calci Sulphureti, ʒj.
Dulcamaræ pulv. ʒij.
Mellis, q. s. ut fiant boli vj. Sumat j ter die.
In Gout and Rheumatism.—MOENCH.
- 2 ℞ Calci Sulphureti, ʒij.
Decocti Althææ, ʒij. Fiat lotio.
In Crusta Lactea.—HAHNEMANN.
- 3 ℞ Calcis, ʒss.
Sulphuris, ʒj.
Aquæ, ʒvii.
(Boil and stir until mixed, then filter).
As a Lotion in Scabies.—VLEMINCKZ.

*CALENDULA. *Marygold*

The flowering tops and stems of *Calendula Officinalis* (Nat. Ord. *Compositæ*). It is antispasmodic, emmenagogue, sudorific, a vulnerary. It is useful in low fevers, amenorrhœa. It is sometimes employed to adulterate saffron.

Dose of Tinctura Calendulæ (marygold, 4 oz.; proof spirit, 1 pint); 1 to 2 drachms.

CALUMBÆ RADIX. *Calumba Root*

The dried root, sliced transversely, of *Jateorrhiza Calumba* (Nat. Ord. *Menispermaceæ*) from Mozambique. It contains a bitter principle, Calumbin. It is a bitter stomachic and tonic. It is useful in the convalescence of fevers, debility from any cause, dyspepsia, scrofula, gout. It is one of the best of the tonics. It differs from Peruvian bark and others in being a pure bitter destitute of astringency, containing neither tannic nor gallic acid. Its preparations may therefore be used as a vehicle for iron or the soluble forms of mercury, which it will not precipitate.

Vehicle.—The Infusion with the Tincture to which an alkaline bicarbonate may be added. It may also be combined in stomachic affections with subnitrate of bismuth, hydrocyanic acid, the mineral acids; the aromatics, as ginger, canella, &c.

Dose of Pulvis Calumbæ, 5 to 20 grains.

Extractum Calumbæ, 2 to 10 grains.

Infusum ————— 1 to 2 ounces.

Tinctura ————— ½ to 2 drachms.

- 1 ℞ Pulv. Calumbæ, ʒss.
 Ferri Tart. ʒij.

 Zingiberis Contusi an ʒiv.
 Senusæ, ʒij.
 Aquæ Bullient, Oj. Misce.

Macera per horam et cola.

In Dyspepsia with Flatulence and Constipation.

CALX. *Lime*

The oxide of the metal Calcium, occurring in hard masses; when treated with water, it swells up, evolves H_2 and crumbles to powder. It is employed to prepare Sl. Lime.

CALX CHLORATA. *Chlorinated Lime*

A dead white powder, prepared by exposing slaked, to the action of chlorine gas. It is rarely given internally, it is used as a lotion in foul and indolent ulcers, burns, chilblains, and some cutaneous diseases. It is deodorant, and possesses bleaching properties. Chlorine soda is a better deodorizer. Chlorinated preparations are not to be prescribed in mixtures, almost all organic substances causing a rapid disappearance of the chlorine.

Solubility.—Partially in water.

Vehicle.—Peppermint water for Liquor Calcis Chloratæ.

Antidotes.—Emetics, milk, flour, white of egg.

Dose of Liquor Calcis Chloratæ, 20 to 40 minims in a wineglass of water.

Vapor Chlori.

1 ℞. Calcis Chloratæ, gr. x.

Aquæ, f℥iiss.

Tinct. Calumbæ, f℥ij.

Syrupi, f℥ss. Misce.

A teaspoonful to be given every hour.

In Typhus Fever.—Dr I

For Chilblains.—TRUSEN.

- 6 ℞. Calcia Chloratæ, gr. iv.
 Aquæ, ʒx. Tere simul, cola, et adde
 Syrupi, ʒij. Fiat haustus.

In Putrid and Scarlet Fever.

CAMBOGIA. *Gamboge*

The gum resin of the *Garcinia Morella* (Nat. Ord. *Guttifera*) from Siam. It is an active hydragogue and drastic purgative, and a vermifuge. Its solution with alkalis is diuretic. It is useful in obstinate constipation; in dropsical affections combined with acid tartrate of potash, elaterium, or jalap; in tapeworm; as a stimulant to the intestinal glands. It is not often given alone, as it is apt to produce nausea, vomiting, and griping. In combination with other cathartics it operates more favorably. In overdoses it is an acrid poison, and hence must be used with caution.

Solubility.—In ammoniated alcohol, ether, rectified spirit.

Vehicle.—In emulsion, pill, or alkaline solutions. To prevent griping, some aromatic, as ginger, or an aromatic oil should be added.

Dose of Cambogia, 2 to 5 grains as a purgative; $\frac{1}{2}$ to 2 grains as an alterative.

Pilula Cambogiæ co., 10 to 15 grains.

**Tincture Cambogiæ*, $\frac{1}{2}$ to 1 drachm (gamboge $\frac{1}{2}$ oz., carbonate of potash 1 oz., brandy 12 ounces), a favourite Continental remedy.

 Pulv. Jalapæ co. ʒij. Fiat pulvis.

In advanced Heart Disease.—Dr J. M. FOTHERGILL.

CAMPHOR. *Camphor*

A concrete volatile oil from the wood of *Camphora Officinarum* (Nat. Ord. *Lauraceæ*), imported in the crude state from China and Japan, and subsequently purified by sublimation. It is antispasmodic, anaphrodisiac, diaphoretic, stimulant, sedative, anodyne. In large doses it is narcotic and poisonous. It produces slight exhilaration without quickening the pulse; quiets nervous irritation and restlessness; combined with diaphoretics, increases their efficacy. It is useful in painful affections of the urinary organs, as stranguary, chordee, distended bladder; febrile complaints; rheumatism; cholera, diarrhœa; with the fœtid gums and valerian in hysterical and nervous affections; with bark in malignant fevers and gangrene. *Externally*, held to the nostrils, it relieves cold in the head. The inhalation of the vapour is useful in affections of the chest. The vapour, combined with hot air or steam, is applied to the skin (*Balnum Camphoræ*). It is readily powdered by triturating it with a drop or two of rectified spirit.

Solubility.—1 in 1000 of water, but increased by bicarbonate of magnesia or myrrh; 1 in 1½ of rectified spirits; freely in chloroform, ether, acetic acid, volatile and fixed oils. Equal parts of camphor and chloral hydrate liquify when rubbed together.

Vehicle.—Camphor water. Milk: this solution must be used fresh, as it is liable to become sour speedily. An elegant emulsion is made with yolk of egg. As an excipient in pill, castor oil forms an excellent mass.

Antidote.—Stomach pump, emetics, coffee, stimulants, warmth to extremities.

Dose of Aqua Camphoræ, 1 to 3 ounces.

Spiritus ———, 10 to 30 minims.

Tinctura ——— comp., 15 to 60 minims (this is known as Paragoric Elixir).

Linimentum Camphoræ.

————— comp.

*Unguentum Camphoræ (camphor 3, white wax 1, lard 9 parts).

*Camphorated Vinegar (camphor 1, alcohol 60, vinegar 180).

In Eczema.—Dr ANDERSON.

***CAMPHORA MONOBROMATA.** *Monobromated Camphor*

Occurs in colourless needles or prisms. It is useful in delirium tremens, insomnia, chorea, convulsions of infancy, hysteria with muscular twitchings and palpitations, epilepsy, hystero-epilepsy, nocturnal emissions, urinary affections. When the heat of the body becomes less than the normal temperature, the dose should be diminished. It is said to be an antidote to strychnia.

Solubility.—Insoluble in water, freely soluble in alcohol, ether, and fixed oils.

Vehicle.—In the form of perles. In pill with confection of roses. Dissolved in almond or olive oil, and mixed with mucilage and water.

Dose.—2 to 5 grains.

- 1 ℞ Camphor. Monobromat. gr. iij.
 Ol. Amygdal. q. s.
 Mucilag. Acaciæ, ℥j. M. Ft. haustus.

In Palpitations.—*

CANELLÆ ALBÆ CORTEX. *White Canella Bark*

The bark of Canella Alba (Nat. Ord. *Canellaceæ*) from the West Indies. It is a warm aromatic stimulant, tonic, antiscorbutic. It is contained in Vinum Rhei.

Dose.—10 to 40 grains.

CANNABIS INDICA. *Indian Hemp*

The dried flowering tops of the female plant of Cannabis Sativa (Nat. Ord. *Cannabinaceæ*) imported from India. The active principle is the resin of the plant called *Cannabin*. It is exhilarant, narcotic, anodyne, antispasmodic. It is useful in insomnia, spinal irritation, painful neuralgic and rheumatic affections, dysmenorrhœa, hay fever. An over-

dose produces a peculiar kind of delirium and catalepsy. It is preferable, in some cases, to opium as it does not produce constipation, nausea, headache or stupor. *Of Common Hemp the seeds are the only part used. They have been given in mucous discharges and jaundice.

Vehicle.—The Tincture in water with gum acacia to suspend the resin. A small quantity of aromatic spirits of ammonia will also render the resin diffusible. Sherry wine, mistura amygdalæ, liquorice powder as an excipient for the Extract in pill.

Incompatibles.—Water and watery infusions in prescribing the Tincture. *Antidote*.—Vegetable acids, as vinegar, lime juice; hot brandy and water. The patient can be allowed to sleep. A blister to the nape of the neck to control any violent spasm.

Dose of Extractum Cannabis Indicæ, $\frac{1}{2}$ to 1 grain.

Tinctura _____, 5 to 20 minims.

- 1 ℞ Tinct. Cannabis Indicæ, mxxv.
 Sp. Vini rectif. mxxlv. Misc: fiat haustus.

 Syr. Papaveris, ʒj.

The whole to be drank in the course of a day.

*In Gonorrhœa and Chronic Inflammation of the Mucous
 Membranes.* TODD.

CANTHARIS. *Cantharides. Spanish Fly*

A dried beetle, *Cantharis Vesicatoria*, collected in Europe. It contains a crystalline principle, *Cantharidin*. It is diuretic, rubefacient, irritant, vesicant; less irritating than ammoniacal or acetic acid lotions. It is useful in chronic affections of the nervous system, spinal irritation, paraplegia, incontinence of urine; in some skin diseases, as lepra, psoriasis; in mucous discharges, as gleet. *Externally*, it is specially applied in deep-seated inflammations, as pleurisy, pericarditis; in ring-worm; as the basis of most stimulants to increase the growth of the hair. It is apt to produce strangury. Its exhibition accordingly must be carefully watched. It is contra-indicated in chronic cystitis.

Vehicle.—The Tincture in some demulcent as *mistura amygdalæ* or decoction of barley, camphor water.

Antidote.—Emetics, stomach pump, emollient drinks, opium.

Dose of *Tinctura Cantharidis*, 5 to 20 minims.

**Pulvis* —————, $\frac{1}{4}$ to 2 grains.

For external use:

Acetum Cantharidis.

Emplastrum Cantharidis.

Unguentum —————.

In Chilblains.—MR WARDROP.

CAPSICI FRUCTUS. *Capsicum Fruit*

The dried ripe fruit of *Capsicum Fastigiatum* (Nat. Ord. *Solanaceæ*), imported from Zanzibar, &c. The Nepaul variety is sold as cayenne pepper. It is a powerful stimulant. It is useful in atony of the stomach; gouty and other dyspepsias; as a condiment to prevent flatulence from a vegetable diet; in cholera, diarrhœa, black vomit, sea-sickness; with quinine in intermittent fevers; to diminish the craving for alcohol. *Externally*, it is used as a gargle in relaxed sorethroat, chronic hoarseness, scarlet fever, and as an application to chilblains.

Vehicle.—In pill. The Tinctura in syrup of orange.

Dose of Pulvis Capsici, $\frac{1}{4}$ to 1 grain.

Tinctura —, 10 to 20 minims.

*Trochisci —.

*Gargarisma Capsici (Tinct. Capsici, $\frac{1}{4}$ to 1 drachm; Inf. of Roses, 8 ounces).

*Linimentum — (Capsicum, 1; Rectified Spirit, 3 parts).

*Sinapine is tissue paper impregnated with Capsicum tincture, and perhaps a little Mustard Oil.

In Chilblains.—Dr A. T. THOMSON.

ARBO ANIMALIS. *Animal Charcoal. Bone Black*

The residue of ox and sheep bones which have been exposed to a red heat without the access of air, reduced to powder. It consists principally of phosphate and carbonate of lime. It is an antidote in alkaloidal poisoning.

CARBO ANIMALIS PURIFICATUS. *Purified Animal Charcoal*

Bone black deprived of its earthy salts, a black pulverulent mass, inodorous and almost tasteless. It is antacid, antidotal, alterative, absorbent, a deodoriser, a decoloriser. It may be used in the same way and for the same purposes as vegetable charcoal, in rickets, scrofula, cutaneous affections. In pharmacy it is employed to deprive alkaloids and other principles of their colour. It has the property of rendering inert the poisonous effects of opium, nux vomica, aconite, and almost all the active organic poisons.

Dose.—20 to 60 grains.

- 1 ℞ Carbonis Animalis.
 Pulv. Glycyrrhizæ, ana ʒvj.
Misce: fiat pulvis. Half or a whole teaspoonful twice a day.
 In Rickets and Scrofula of Children.—**RADIUS.**

 Glycyrrhizæ pulv. q. s.
Fiat bolus. Capiat unum ter die.
 In Swelled and Scirrhus Prostate.—**MAGENDIE.**

CARBO LIGNI. *Wood Charcoal*

An odourless and tasteless black powder prepared from wood charred by exposure to a red heat without access of air. It is antiseptic, antacid, absorbent, a deodoriser. It is useful in acidity of the stomach, foetid eructations, flatulency, to correct the state of the fæces in some diseases, in organic disease of the stomach, in obstinate constipation. *Externally*, in the form of poultice it is employed to foetid ulcers and other offensive sores, wounds, &c. In porrigo it is dusted on the skin or applied in the form of an ointment. It is used as a dentifrice.

Solubility.—Insoluble in water. Not affected by ordinary intense heat.

Vehicle.—Wafer capsules, lozenge, Bragg's biscuits.

Dose.—20 to 60 grains.

- 1 ℞ Pulv. Carbonis Tilisæ (Common Lime), ʒj.
Syr. Aurantii, ʒij. Fiat electuarium.
One or two teaspoonfuls every two hours.
In Fetid Eructations.—SCHUBARTH.

Two tablespoonfuls an hour after a meal.
In Dyspepsia with Palpitation.—Dr J. MACROBIN.

***CARNIS EXTRACTUM.** *Extract of Meat*

The German extract has an agreeable taste and pleasant odour. There are also similar preparations by Liebig, Brand, Cross and Blackwell. It is nutritive. It is a valuable form for administering the albuminates contained in the flesh of animals. Its use is indicated in all cases of intolerance by the stomach of meat, or when that organ is too weak to assimilate it in other forms. It is also employed in nutritive enemata.

Solubility.—Freely in water.

- 1 ℞ Carnis Extract. sol. ℥iv.
 Quin. Sulph. gr. v.
 Sp. Vini Gallici, 3ij.
 Pulv. Amyl. q. s. M. Ft. enema.

To be injected every four hours.

In Blood Poisoning with High Temperature.—*

CARUI FRUCTUS. *Carraway Fruit*

The dried fruit of *Carum Carui* (Nat. Ord. *Umbellifera*), cultivated in England and Germany. It is aromatic, carminative, stimulant, tonic. It is useful in flatulent colic, and as an adjuvant to other remedies. Its valuable properties are due to the presence of a volatile oil contained in the pericarp.

Vehicle.—The Oil dissolved in spirit and diluted with water, or on a lump of sugar.

Dose of Aqua Carui, 1 to 2 ounces.

Oleum —, 2 to 4 minims.

CARYOPHYLLUM. *Cloves*

The dried unexpanded flower-buds of *Caryophyllus Aromaticus* (Nat. Ord. *Myrtaceæ*) from Penang, &c. They are aromatic, carminative, stimulant. They are useful in flatulence, nausea, vomiting, and defective digestion. They are chiefly employed as an adjunct to bitter tonics and as a corrective to purgatives. *Locally*, the oil is applied to carious teeth.

Vehicle.—As for caraway fruit.

Incompatibles.—For the Infusion: lime water, mineral acids, salts of iron.

Dose of Pulvis Caryophylli, 5 to 10 grains.

Infusum ———, 1 to 2 ounces.

Oleum ———, 1 to 4 minims.

*Tinctura ———, 80 to 90 minims (cloves 1 ounce, rectified spirit 1 pint).

- 5 ℞. Inf. Caryophylli, ʒviiij—xij.
Tinct. Galbani, ʒiv. Fiat enema.

A Stimulant.—Dr R. REECH.

CASCARILLÆ CORTEX. *Cascarilla Bark*

The bark of *Croton Eluteria* (Nat. Ord. *Euphorbiaceæ*) from the Bahamas. It is aromatic, stomachic, tonic, a stimulant expectorant. It is useful in simple dyspepsia, flatulent colic, atony of the stomach and bowels, debility generally, also in dysentery, chronic diarrhœa. As a probable stimulant expectorant, it is given in bronchitis accompanied with excessive expectoration. It is often combined with bitter and stimulant tonics.

Vehicle.—The Tincture and Infusion with syrup of orange.

Incompatibles.—For the Infusion: lime water, mineral acids, metallic salts.

Dose of Pulvis Cascariellæ Corticis, 10 to 30 grains.

Infusum ———, 1 to 20 ounces.

*Tinctura ———, $\frac{1}{2}$ to 2 drachms.

*Mistura ——— comp. 1 to 1 $\frac{1}{2}$ drachms (Infusum Cascariellæ 17 ounces, Acetum Scillæ 1 ounce, Tinct. Camph. comp. 2 ounces).

℞. Inf. Cascariellæ, f 3vss.

Tinct. Cascariellæ, f 3as.

Fiat mistura: cochlearia tria ampla pro dosi bis vel ter die.

In Atonic and Flatulent Dyspepsia.—Mr BRANDE.

2 ℞. Inf. Cascariellæ, f 3viij.

Tinct. Cascariellæ,

Tinct. Zingiberis, ana f 3iv.

Misce: fiat mistura stomachica. Two tablespoonfuls twice a day.

In Dyspepsia with Loss of Appetite.—Dr JOY.

3 ℞. Inf. Cascariellæ, 3vij.

Sodæ Bicarb. 3ij.

Tinct. Cardamomi, 3vj. Misce.

A wineglassful an hour or two before and two hours after dinner.

Mr ABERNETHY.

4 ℞. Inf. Cascariellæ, f 3vj.

Aquæ Cinnamomi, f 3iij.

Pulv. Kino co. 3ss.

Syr. Papaveris, 3j.

Misce: fiat haustus bis in die sumendus.

In Chronic Dysentery.—Dr G. GREGORY.

5 ℞. Inf. Cascariellæ, f 3vss.

Acidi Nitrici dil. f 3j.

Tinct. Lupuli, f 3iij. Misce, fiat mistura.

Dose, two tablespoonfuls.

(HOSP. FOR CONSUMPTION.)

CASSIÆ PULPA. *Cassia Pulp*

The pulp from the pods of Cassia Fistula (Nat. Ord. *Leguminosæ*) from the East or West Indies. A blackish-brown viscid pulp with a sweetish taste. It is laxative; in large doses, purgative. It is useful in habitual constipation. It is generally administered in combination with other purgatives. It is apt to cause nausea, flatulence, and griping.

Dose of Cassiæ Pulpa, as a laxative, 60 to 120 grains; as a purgative, 1 to 2 ounces.

*Confectio Cassiæ, 2 to 4 drachms (cassia $\frac{1}{2}$ lb., manna 2 ounces, tamarind pulp 1 ounce, syrup of roses 8 ounces).

- 1 \mathcal{R} . Pulpæ Cassiæ, \mathfrak{zj} .
Potass. Tart. \mathfrak{zj} .
Aque Cinnamomi, $\mathfrak{z}\text{ij}$.
Mannæ, $\mathfrak{z}\text{iss}$. Misce.

A tablespoonful every two or three hours until it operates.

As a Laxative for Children.—Dr URE.

- 2 \mathcal{R} . Pulpæ Cassiæ, \mathfrak{zj} .
Aque ferventis, Oij . Macera, cola, et adde
Magnes. Sulph. \mathfrak{zj} .
Antim. Tart. gr. ij . Misce.

To be taken by wineglassfuls.

In Painter's Colic.—FRENCH HOSPITALS.

CASTOREUM. *Castor*

The dried preputial follicles and their secretion obtained from the Beaver, *Castor Fiber*. It is antispasmodic, emmenagogue, a nervine stimulant. It is useful in hysteria, epilepsy, spasmodic affections, low fevers with nervous symptoms, nervous derangements of the uterine functions. The Russian Castor is more powerful than the American, but is very scarce.

Vehicle.—The Tincture in chloroform or aniseed water or mistura amygdalæ. The Powders in wafer capsules.

Dose of Pulvis Castorei, 5 to 10 grains.

Tinctura —, $\frac{1}{2}$ to 1 drachm.

*——— Ammoniata, $\frac{1}{2}$ to 2 drachms (Castor $2\frac{1}{2}$ ounces, Assa-fœtida 600 grains, Sp. Ammoniac 2 pints).

- 1 \mathcal{R} . Castorei, \mathfrak{zj} .
Ammon. Carb. gr. v.
Opii pulv. gr. ss.
Syrupi, q. s., ut fiant pilulæ vj.

To be taken at short intervals.

In Hysteria.—Dr HOOPER.

In Typhus Fever.—Dr HUNTER.

CATECHU PALLIDUM. *Pale Catechu*

An extract of the leaves and shoots of *Uncaria Gambir* (Nat. Ord. *Rubiaceæ*) from the Eastern Archipelago. It occurs in reddish-brown pieces or square sticks, porous, and of a bitter, astringent taste. It is a powerful astringent and tonic. It is useful in diarrhœa, chronic dysentery, some forms of atonic dyspepsia with pyrosis, in mucous discharges, as cystorrhœa, gleet, leucorrhœa, chronic catarrh; and as a remote astringent in hæmorrhages. *Externally*, it is employed in relaxed sorethroat, hoarseness, ulcerations of the mouth, sore nipples.

Gummi Rubrum may be used as a substitute.

Solubility.—Entirely in boiling water.

Vehicle.—Water with sugar and gum acacia; mistura creta, glycerine and water, lozenges (2 grains).

Incompatibles.—The alkalies, metallic salts.

*CATECHU NIGRUM. *Black Catechu, Terra Japonica,*

Is an extract of the *Acacia Catechu* (Nat. Ord. *Leguminosæ*). It contains twice the astringent properties of

pale variety. In cold water only 88 parts are dissolved
00 parts.

Use of Pulvis Catechu, 10 to 30 grains.
 ————— comp. 15 to 30 grains,
 Infusum —, 1 to 2 ounces.
 Tinctura —, $\frac{1}{4}$ to 2 drachms.
 Trochisci —, 1 to 3 lozenges.
 *Pulv. Catechu Nigrum, 5 to 15 grains.

As a Tooth Powder in Spongy Gums.—Dr PARIS.

CERA ALBA. *White Wax*

Yellow wax, bleached by exposure to light, air, and moisture. It is emollient. It is chiefly employed as the basis of cerates and ointments.

Solubility.—Entirely in oil of turpentine. Insoluble in alcohol and ether.

Unguentum simplex.

*Ceratum Galeni (Cold Cream).

CERA FLAVA. *Yellow Wax*

The prepared honey-comb of the hive bee, *Apis Mellifica*. It is principally employed as an ingredient of plasters and ointments.

Solubility.—About three fourths in oil of turpentine.

CEREVISIÆ FERMENTUM. *Beer Yeast*

A viscid, semi-fluid, frothy ferment obtained in brewing beer, and consisting of microscopic confervoid cells. It is stimulant, tonic, laxative, antiseptic. It is useful in scarlet, typhoid, and typhus fevers; general debility of the nervous system, putrid sorethroat, furuncular affections, diabetes. *Externally*, it is employed as a stimulant and antiseptic to ulcers and burns, and is said to prevent the formation of boils and carbuncles.

Solubility.—Insoluble in water or alcohol.

Vehicle.—Water.

Dose of *Cervisiæ Fermentum, $\frac{1}{2}$ to 1 ounce.

Cataplasma Fermenti.

1

℞ Fermenti Cerevisiæ, ʒss.
 Aquæ Camphoræ, fʒij.

Fiat haustus, tertia quaque hora sumendus.

[If required more aperient, add Tinct. Jalapæ; if too relaxing, a few drops of Tinct. Opii.]

Dr STOCKER.

In Petechial Typhus and Dysentery with fœtid dejecta.

Dr JONES LAMPREY.

CERII OXALAS. *Oxalate of Cerium*

A white powder, chiefly obtained from a mineral called Cerite. It is first a local sedative, afterwards a nervine tonic. It is useful in irritable affections of the stomach, as dyspepsia, gastrodynia, pyrosis, chronic vomiting; in chorea, epilepsy. It was introduced by Sir James Simpson as a remedy for the obstinate vomiting of pregnancy and hysteria.

Solubility.—Insoluble in water or alcohol.

Vehicle.—In pill. Wafer capsules.

Dose.—1 to 2 grains.

- 1 ℞ Cerii Oxalatis, gr. j—ij.
 Micæ panis, q. s. Fiat pilula.

In the Vomiting of Pregnancy.—Sir JAMES SIMPSON.

 Two pills three times a day.

In Morning Sickness of Pregnancy.—Dr WHITE (U.S.).

CETACEUM. *Spermaceti*

A white concretion, prepared from the oily matter in the head of the Sperm Whale, *Physeter Macrocephalus*. It is demulcent, emollient. It is useful in irritation of the respiratory and urinary organs, and of the alimentary tract. It is chiefly employed in cerates and ointments.

Solubility.—In fixed oils, boiling ether and alcohol. It is reduced to powder by rectified spirit.

Vehicle.—Milk. Beaten up with egg and warm milk.

Dose of Pulvis Cetacei, 20 to 60 grains, boiled in milk.
Unguentum Cetacei for local use.

- 1 ℞ Cetacei pulv. ʒij.
 Ol. Olivæ, ʒj. Tere simul, dein adde

Two tablespoonfuls every four hours.

In Sickness of Pregnancy.—*

CETRARIA. *Iceland Moss*

the entire lichen, *Cetraria Islandica* (Nat. Ord. *Lichen*-
from the north of Europe. It contains a bitter principle,
Cetrarin. It is demulcent, tonic, nutritive. It is
principally prescribed in consumptive and other coughs
attended with debility and emaciation; also in chronic
asthma and diarrhoea, irritability of the respiratory and
enteric tracts, and atony of the digestive system. *Cetraria*
has been used in intermittent fevers. Carrageen or
Irish moss may be used as a substitute. When required as
a demulcent and nutritive, its bitterness may be, in a great
measure, removed by maceration in cold or warm water, to which
the carbonate of potash or soda has been added.

Recipe.—The decoction or jelly.

Use of Decoctum Cetrariæ, 1 to 2 ounces.

**Gelatina Lichensis*, 4 drachms dissolved in warm milk.

**Cetrarin*, 2 to 3 grains.

℞ Decocti Cetrariæ, f ʒvss.

Acidi Nitrici dil. f ʒj.

Syr. Tolu. f ʒss.

Tinct. Camphoræ co. f ʒj.

Fiat mistura. Sumat quartam partem ter die.

In Consumption.—Dr FARRE.

℞ Decocti Cetrariæ, ʒiiss.

Acidi Sulph. dil. f ʒiiss.

Syrupi, f ʒvj.

Dr A. T. THOMSON.

℞ Cetrarinæ, gr. xxiv.

Ext. Calumbæ, ʒss.

Misce, et div. in pil. xij. Sumat unam quartam quaque hora.

In Intermittents.—Dr NELIGAN.

CHAULMOOGRA OIL

See GYNOCARDIÆ OLEUM

CHIMAPHILA OR PYROLA UMBELLATA.Winter Green*

The dried herb, *Chimaphila Umbellata* (Nat. Ord. *Pyrolaceæ*). It is a stimulating diuretic; it is also tonic and moderately astringent. The fresh leaves are acrid, and when applied to the skin, act as a rubefacient. It is useful in dropsy, chronic affections of the urinary organs, scrofulous ulcerations, cutaneous diseases. It stimulates the kidneys more than *Uva Ursi*, but is less astringent. The Oil of winter green is one of the best deodorants of Iodoform.

Dose of Decoctum *Chimaphilæ*, 2 to 4 ounces (*Chimaphila* 1 ounce, water 1½ pint, boiled to a pint).

- 1 ℞ Decocti *Chimaphilæ*, f 3xj.
 Potass. Bicarb. ʒj.
 Tinct. *Hyoscyami*, f ʒss.

Misce: fiat haustus, bis die sumendus.

In Mucous Urine with Inactive Kidneys.—Dr G. BIRD.

- 2 ℞ Inf. *Chimaphilæ*, ʒvj.
 Tinct. *Cubebæ*, ʒj.
 Tinct. *Scillæ*, ʒiij.
 Sp. *Ætheris Nit.* ʒiij.

Misce: capiat cochl. iij ter die.

In Dropsy of the Chest.—Dr R. REECE.

- 3 ℞ Dec. *Chimaphilæ*, f ʒvij.
 Potass. Nitrat. ʒss.
 Sp. *Ætheris Nit.* f ʒss.
 Sp. *Juniperi* co. f ʒiij.

Fiat mistura. Capiat cochleare amplum quaque tertiâ horâ.

In Old Cases of Dropsy.—Dr NELIGAN.

- 4 ℞ Decocti *Chimaphilæ*, ʒvj.
 Potass. Nitras, ʒj.
 Sp. *Juniperi*, ʒj—ij.
 Sp. *Etheris Nit.* ʒiij. Misce.

One tablespoonful every six hours for a child of five years.

A Tonic and Stimulating Diuretic.—Dr T. H. TANNER.

CHENOPODIUM ANTHELMINTICUM. *Wormwood

The fruit of *Chenopodium Anthelminticum* (Nat. Ord. *Chenopodiaceæ*). It is much used in the United States as a vermicide, especially for the *ascaris lumbricoides*.

Vehicle.—The Powdered Seeds in syrup or confection. The Oil in emulsion.

Dose of Pulvis Chenopodii Anthelmintici, 20 to 40 grains.

Oleum —————, 5 to 10 minims.

*CHINOLINE

A colourless, transparent, mobile oil, having strong refractory properties, with the odour of phosphorus and hydrocydic acid. It may be prepared from various substances. It has been employed as a topical remedy in diphtheria. It is said to loosen the membrane in from twelve to twenty-four hours, the glandular swellings subside, and the temperature more quickly reduced than under other treatment.

Solubility.—Freely in alcohol, ether, and oils. Very sparingly soluble in water, rather more in hot water.

1 ℞ Chinoline, gr. xv.

Sp. Rectif. ʒj.

Ol. Menth. Pip. ℥ij.

Aquæ destil. ad Oj. M. Ft. garg.

To be used as a gargle.

In Diphtheria.—Dr SEIFERT.

2 ℞ Chinoline, (5 per cent. sol.)

Sp. Rectif.

Aquæ destil. partes æquales. M.

To be applied to the affected parts by means of a brush or swab.

In Diphtheria.—Dr SEIFERT.

CHIRATA. *Chiretta*

The entire plant of *Ophelia Chirata* (Nat. Ord. *Gentia-aceæ*). In its properties and uses it resembles Gentian, but is a purer bitter. It is useful in dyspepsia attended with atulence, sluggishness of the bowels, nervousness, and disordered secretions. In India it is given in intermittent and remittent fevers, and after a course of mercury. It can be rescribed with the salts of iron. It is preferable to other vegetable tonics, as it promotes the healthy action of the liver, and does not constipate the bowels.

Vehicle.—The Infusion with the Tincture, to which an aromatic syrup may be added, as syrup of ginger, or simple syrup with spirit of nutmeg.

Dose of Pulvis Chiratae, 20 grains.

Infusum ———, 1 to 2 ounces.

Tinctura ———, 15 to 60 minims.

*Extractum ———, 2 to 5 grains.

- CHLORAL HYDRAS.** *Hydrate of Chloral*

A white crystalline solid, having a pungent but not acrid odour, and a bitter taste. It is prepared by the action of dry chlorine gas on anhydrous alcohol, and subsequent purification. It is hypnotic, anodyne, antispasmodic, and produces great muscular relaxation. It is useful in insomnia, nervous disturbance, and restlessness, delirium tremens, hypochondriacal affections, chorea, scarlet fever, colic, idiopathic tetanus, cancer and other painful diseases, asthma, hooping-cough. In obstetrics, in quickly repeated doses, it is a better anæsthetic than chloroform. It does not cause headache or nausea, does not constipate the bowels or depress vital activity. Its action is more uniform than other hypnotics. When 3 parts of camphor are rubbed with 3 parts of chloral a liquid is formed. It is useful externally in allaying acute pain, as neuralgia.

Solubility.—1 in 1 of rectified spirit, glycerine, fixed oils; 4 in 1 of water.

Vehicle.—Water freely sweetened with syrup of orange, tolu, or ginger; sweetened cinnamon water.

Antidote.—Stomach-pump, emetics, cold affusion to spine, artificial respiration; picrotoxine $\frac{1}{2}$ of a grain to chloral a drachm.

It is contra-indicated in Bright's disease, and must be carefully watched in any cardiac complication.

Dose of Chloral Hydras, 5 to 60 grains.

Syrupus Chloral, $\frac{1}{4}$ to 3 drachms.

1 ℞ Chloral Hydrat. gr. lx.

 Aque Cinnamomi, ℥ij.

 Syr. Aurantii, ℥j. M.

One half at bed-time.

A Hypnotic.—Dr GREAM.

CHLORI LIQUOR. *Solution of Chlorine*

A yellowish-green liquid, prepared by dissolving chlorine gas in half its volume of water. It is stimulant, antiseptic, disinfectant. It is useful in the later stage of typhoid fever, in scarlatina, chronic diseases of the liver. *Externally*, it is employed as a gargle in foetid conditions of the mouth and throat; as a disinfectant in surgical and other diseases; and in baths in hepatitis.

Vehicle.—Water.

Incompatibles.—Salts of lead and silver, and vegetable infusions.

Antidote.—Milk, flour, white of egg.

Chlorinated preparations should not be prescribed in mixtures, as almost all organic substances cause a rapid disappearance of the chlorine.

Dose.—10 to 30 minims.

1 ℞ Solut. Chlorig (Midd. Hosp.), ʒij.

VON GRAEFE.

CHLOROFORMUM. *Chloroform*

A colourless, limpid, volatile liquid, obtained by distillation from a mixture of chlorinated lime, slaked lime, and rectified spirit. It has a peculiar, agreeable, fruity, ethereal odour, and sweet taste. It is sedative, narcotic, antispasmodic, antiperiodic, stimulant, anodyne. It is useful in nervous and painful affections, asthma, dyspepsia, colic, sea-sickness. *Externally*, it is a stimulant to chronic ulcers, senile gangrene. In the form of vapour it has been applied to the rectum and vagina to allay pain. It dissolves gutta percha, tolu, benzoin, iodine, bromine, most of the organic alkaloids, fixed and volatile oils, resins, and fats. Its chief use is to produce anæsthesia by inhalation for surgical operations. *Æther* sp. g. 720 and Bichloride of Methyle, are preferred as being far less dangerous. *Æther Purus*, Amylene, and Dutch Liquid, have also been used for inhaling.

Solubility.—1 in 1½ of ether, 1 in 200 of water, freely in olive oil and spirit of turpentine; not in glycerine.

Vehicle.—Syrup, mucilage.

Incompatibles.—Weak spirits or glycerine.

Antidote.—Fresh air, artificial respiration, galvanism, inversion of the body, nitrite of amyl.

Dose of Chloroformum, 3 to 10 minims; in delirium tremens, to a drachm
Aqua Chloroformi, ½ to 2 ounces.

Dose of Spiritus Chloroformi, 10 to 60 minims.

Tinctura _____ comp. (contains Cardamoms), 20 to 60 minims.

Linimentum Chloroformi.

***CIMICIFUGIN.** *Cimicifugin*

n obtained from *Actæa Racemosa* (Nat. Ord. *Ranun-*). It is a nervine tonic and sedative.

1 to 4 grains.

CINCHONA. *Cinchona Bark*

ona, or Peruvian Bark, is obtained from several f *Cinchona*. The official species are:—*Cinchona* yellow cinchona; *Cinchona pallida*—pale cinchona; *Cinchona rubra*—red cinchona. The first named is t employed; the pale is given where a lighter tonic ater astringency is required; the red is the most . All of them are tonic, antispasmodic, and at astringent. They are useful in intermittent and nt fevers, atonic dyspepsia, debilitated conditions of aeral system, acute and chronic inflammation of and organs, neuralgic affections. They are said to erysipelas in convalescence from acute diseases. uid preparations of *Cinchona* of the British Phar- ia are so very defective that one or two non-official ll be noticed.

ractum Cinchonæ Rubræ Liquidum.—A non-alco- right yellow or reddish preparation, yielding a clear with water. Prepared from the red bark.—Dr de e la Hague.

ractum Cinchonæ Fluidum (U.S.).—An excellent tion from yellow cinchona bark, by which its alka- e eliminated as they naturally exist.

sum Cinchona Acidum.—Water extracts from bark ates of the alkaloids but leaves behind the com- which these principles form with the cincho-tannic The simple infusion of the British Pharmacopœia is e rather feeble. If a small quantity of acid be

added to the water before infusing, a much stronger, nearly exhaustive preparation, will result.

Vehicle for Cinchona.—The Powdered Bark, which has a medicinal action other than that of its alkaloidal derivatives, may be given diffused in an aromatic infusion. Syrup of orange peel, and especially if made with the tincture of fresh orange peel, when diluted with water, will form an agreeable vehicle for liquid cinchona preparations. A mixture of glycerine and chloroform water.

CINCHONÆ FLAVÆ CORTEX. *Yellow Cinchona Bark*

The bark of *Cinchona Calisaya* (Nat. Ord. *Rubiaceæ*) from Bolivia, Southern Peru, the East Indies, and Java. It should yield at least 2 per cent. of Quinine. It contains also Cinchonidine and Cinchonine. A decided tonic, to be given when the stomach is able to bear such. The B. P. uses the yellow bark always, except in the Compound Tincture.

Vehicle.—See Cinchonæ.

Incompatibles.—Ammonia, lime water, metallic salts.

Dose of Cinchonæ Flavæ Cortex, 10 to 60 grains.

Decoctum Cinchonæ, 1 to 2 ounces.

Extractum ——— Liquidum, 10 to 30 minims.

Infusum ———, 1 to 2 ounces.

Tinctura ———, 1 to 2 drachms.

*Extractum ——— Fluidum (U.S.), 30 minims.

*Infusum ——— Acidum, 1 ounce.

CINCHONÆ PALLIDÆ CORTEX. *Pale Cinchona Bark*

The bark of *Cinchona Officinalis*—var. *Coudaminea* et alia (Nat. Ord. *Rubiaceæ*), formerly from Loxa-Ecuador, but now principally from the East Indies, Ceylon, Jamaica, &c. The Indian officinal barks are rich in Quinine; next in order come Cinchonidine and Cinchonine. The bark also contains the largest proportion of the astringent principle—Cincho-tannic Acid. A mild tonic: specially useful when the stomach is weak and irritable.

Vehicls.—See *Cinchona*.

Dose of *Cinchonæ Pallidæ Cortex*, 10 to 60 grains.

Tinctura Cinchonæ Comp. ʒ to 2 drachms.

**Infusum* ——— *Pallidæ*, 1 to 2 ounces.

 Potass. Carb. ℥j.
 Syr. Simplicis, ℥j.
 Aque destil. ℥iij. Misce.
 A teaspoonful when the attack threatens.

In Whooping-cough.—NIEMMEYER.

*CODEIA. *Codeia*

Occurs in white octahedron crystals, alkaline in reaction. An alkaloid obtained from Opium. It is said to act like Morphia, but in a less degree. Its doses and effects are not satisfactorily determined. It has been administered in diabetes and whooping cough.

Solubility.—In water, ether, alcohol.

Vehicle.—In pill.

Dose of Codeinæ, 1 to 2 grains.

Syrupus Codeinæ, 1 to 2 drachms.

- 1 ℞ Codeinæ, gr. iiss.
 Aque Laurocerasi, ℥iiss.
 Aque flor. Tiliæ (Common Lime Tree), ℥iij.
 Syrupi, ℥j.

Misce. Sumat cochl. j. magnum omni semi-horâ.

For Pain and Sleeplessness.—TROUSSEAU and REVEIL.

*COFFEA. *Coffee*

The seeds of *Coffea Arabica* (Nat. Ord. *Rubiaceæ*), in a raw state, possesses febrifuge properties. It contains a peculiar principle, *Caffeine* or *Theine*, identical with that contained in tea.

The dose of *unroasted coffee* is a scruple of the powdered berries every hour during the intermission of intermittent fevers. It is also given in the form of a strong decoction which is sometimes combined with lemon juice.

Roasted coffee is exhilarant and antisoporific, and is given to counteract the effects of opium, alcohol, and other narcotic poisons. It is best prepared by percolation, 1 to 2 ounces of fresh ground coffee to a pint of boiling water. It has been found useful in whooping-cough, asthma, albuminuria, high-coloured urine. It conceals the bitter taste of quinine, and, in some measure, that of sulphate of magnesia.

- 1 ℞ Coffeæ (non tostæ), ℥j.
 Aque, f℥xviii. Coque ad ℥vj et cola.
 The whole to be given in three doses during the intermission.
 In Agues.—Dr GRINDEL.

- 2 ℞ Coffeæ tostæ, 3vj.
 Aque ferventis, Oss. Fiat infusum.
 The whole to be taken during the day.
 In Albuminuria.—M. HONORE.

*CONVALLARIA MAJALIS. *Lily of Valley*

The extract from the whole plant of *Convallaria Majalis* (Nat. Ord. *Liliaceæ*). Its active principle is *Convallamarin*, one of its glucosides. It is diuretic, a vascular

stimulant, emetic. Its action resembles that of digitalis, but is less nauseating. It does not exhaust the contractility of the heart and arteries. It also causes a stronger ventricular contraction. It is useful in mitral regurgitation. The Russian peasantry use it in all cases of dropsy.

Vehicle.—The Extract in pill; the Tincture in sweetened water.

Dose of Extractum Convallariæ Majalis, 5 to 8 grains.

Tinctura _____, 80 to 120 minims.

COLCHICI CORMUS. *Colchicum Corm*

The fresh corm of *Colchicum Autumnale* (Nat. Ord. *Melanthaceæ*) stripped of its coats, sliced, and dried. It is diuretic, a vascular depressant, purgative. In large doses, it is a narcotico-acrid poison. It increases the action of the liver, intestines, kidneys, and the skin, but diminishes that of the heart. It is useful in controlling the pain and inflammation of gout, rheumatism, and other allied affections, in dropsy, and as a purgative in disordered states of the liver. Eigenmann recommends Vinum Colchici in gonorrhœa combined with laudanum, low diet, and warm baths.

Vehicle.—The Vinum with carbonate of magnesia, compound tincture of cardamoms, and cinnamon or peppermint water. The Acetic Extract with liquorice powder. Alkalies correct the action of colchicum; acids render it more irritant. Magnesia is recommended to be given with the Acetic Extract to neutralise the acid.

Incompatibles.—All astringent preparations, tincture of iodine, guaiacum. *Antidote*.—Emetics, afterwards demulcent drinks. If there be coma, coffee, brandy, ammonia, &c.

Dose of Pulvis Colchici Cormi, 2 to 8 grains.

Extractum Colchici, 1 to 4 grains.

Extractum _____ Aceticum, 1 to 2 grains.

Vinum _____, 10 to 80 minims.

*Acetum _____, 30 to 60 minims.

Mr HARVE

COLLODIUM. *Collodion*

A colourless, inflammable liquid, with ethereal odour prepared from Pyroxylin or Gun-cotton in a solution of ether and rectified spirit. On exposure to air, it dries rapidly to a thin, transparent film. On the body this contracts on drying. It is readily dissolved by chloroform. It is chiefly used as a protection for coating ulcers, wounds,

eruptions, sore nipples. It tends to crack and split off with the movements of the body. Dr Richardson's "Styptic Colloid," also intended as an application to wounds, is a saturated solution of tannic acid and pyroxylin in ether.

- 1 ℞ Colloidii, part. c.
 Acidi Carbolici, part x.
 Acidi Tannici,

Misce agitando.

To Stanch Bleeding.—DR PAVERI.

COLLODIUM FLEXILE. *Flexible Collodion*

A colourless liquid of collodion, canada balsam, and castor oil. Collodion film is readily dissolved by chloroform. It does not contract on drying. It is applied in abrasions of the skin, burns, ulcers, erysipelas, shingles, &c.

- 1 ℞ Collodii Flexil. ʒj.
 Morphiæ, gr. viij. Fiat lotio.

Paint affected surfaces.

In Herpes Zoster.—BOURDON.

COLOCYNTHIDIS PULPA. *Colocynth Pulp*

The dried, decorticated fruit of *Citrullus Colocynthis* (Nat. Ord. *Cucurbitaceæ*) from Europe. It is a powerful drastic hydragogue cathartic. In excessive doses, it produces violent irritation; but in moderate doses, in combination with other purgatives, it usually operates effectually without inconvenience or danger. It is useful in habitual constipation and alvine obstruction; as a revulsive in affections of the brain; and where an efficient purgative is required.

Vehicle.—In combination with other aperients; and carminative and soothing agents, as the Compound Pill with Henbane.

Dose of Colocynthis Pulpa, 2 to 8 grains.

Extractum Colocynthis comp., 3 to 10 grains, with extract of Hyoscyamus to prevent griping.

Pilula Colocynthis comp., 3 to 10 grains.

Pilula ——— et Hyoscyami, 5 to 10 grains.

*Tinctura ——— (colocynth 1 ounce, star of anise 60 grains, rectified spirit 1 pound), 30 to 60 minims.

*Enema Colocynthis, for local use.

 TROUSSEAU and REVELL.

*CONDURANGO

The bark of *Ganolobus Condurango* (Nat. Ord. *Asclepiadaceæ*) has been introduced from America as a specific antidote to cancer. This has not been verified in Europe. It is, however, said to be useful in syphilis and in intestinal, urethral, and uterine ulcers. It is given in the form of a decoction of the wood, and of the wood and bark.

CONII FOLIA. *Hemlock Leaves*

The fresh leaves and young branches of *Conium Maculatum* (Nat. Ord. *Umbelliferae*). Hemlock is a powerful narcotic poison. Its active principle is Conia, a liquid alkaloid. It is anodyne, sedative, antispasmodic, deobstruent. It is useful in bronchitis, hooping-cough, phthisis, spinal irritation, neuralgia, rheumatism, chronic hepatitis, syphilis, goitre, scrofulous and other unhealthy ulcerations, cutaneous affections, cancer, enlarged viscera, ovaritis, and other chronic inflammations of the female pelvic organs. *Externally*, it is applied to relieve pain. In poisoning by Hemlock there is no engorgement of the brain.

Solubility.—Of Conia, 1 in 100 of water, 1 in 6 of ether; in all proportions with alcohol.

Vehicle.—The Juice in chloroform water or aromatic waters.

Incompatibles.—Vegetable acids and astringents, caustic alkalies.

Antidote.—Emetics, followed by internal and external stimulants.

Dose of Conii Folia, 2 to 8 grains.

Extractum Conii, 4 to 8 grains.

Succus —, 30 to 60 minims.

Pilula — comp., 4 to 8 grains.

Cataplasma —.

Vapor —.

*Unguentum — (fresh hemlock and lard each 1 pound).

membrane generally. In large doses, it is laxative. It is specially useful in diseases of the genito-urinary organs, as gonorrhœa and gleet; and in hæmorrhoidal disorders. It is also given in chronic affections of the chest, as bronchitis, asthma. *Externally*, it is applied to chilblains and indolent ulcers. It is contra-indicated in febrile states of the system.

Solubility.—Entirely in absolute alcohol, ether, the fixed and volatile oils.

Vehicle.—An emulsion of copaiba may best be made by mixing it with an equal part of powdered gum acacia, adding two parts of water, and after thorough trituration, diluting with an aromatic or plain water with syrup of orange. Copaiba capsules. In pill, with $\frac{1}{2}$ its weight of calcined magnesia; or an equal weight of carbonate of magnesia; or equal parts of copaiba, white wax, and liquorice powder. In enema.

CRETA. *Chalk*

Native friable Carbonate of Lime. It is used for producing carbonic acid gas. In the form of Whitening mixed with water, it is a useful application to burns, &c. It is an antidote in poisoning by the acids.

CRETA PRÆPARATA. *Prepared Chalk*

Chalk reduced to a very fine powder and elutriated. It occurs in white powder or small friable masses, and is tasteless. It is astringent, antacid. It is useful in heartburn, acidity of the stomach and bowels when laxatives are undesirable, in diarrhoeas, rachitis and scrofulous affections. Externally, it is applied to absorb acrid discharges from ulcerated burns, &c.

Solubility.—Entirely in hydrochloric acid with effervescence, insoluble in water.

Vehicle.—An aromatic water sweetened. Mist. Amygdalæ.

Incompatibles.—All acids and sulphates.

In the form of prepared oyster shells (Testæ Præparatæ), and held in solution by excess of carbonic acid, it has been named "Carrara Water." The best antidote to poisoning by oxalic acid.

Dose of Creta Præparata, 20 to 60 grains.

Mistura Cretæ, 1 to 2 ounces.

Pulvis Cretæ Aromaticus, 10 to 60 grains.

Pulvis ————— cum Opio, 10 to 40 grains.

*Cholera mixture (useful in all cases of diarrhoea) consists of Aromatic Powder, 3 drachms; Sp. Sal Volatile, 3 drachms; Tincture of Catechu, 3 drachms; Compound Tincture of Cardamoms, 6 drachms; Tincture of Opium, 1 drachm; Chalk Mixture to make 20 ounces. *Dose*, 8 drachms for an adult; 4 drachms for a child twelve years old; 2 drachms for seven years old, after each liquid motion.

*Unguentum Cretæ (Precipitated Chalk 1, Spermaceti Ointment parts).

CROCUS. *Saffron*

The dried stigma and style of *Crocus Sativus* (N₁ *Iridaceæ*) from Europe. On the Continent, it is a exhilarant, antispasmodic, and emmenagogue. Its use is to give colour and flavour to official preparations. An infusion of a drachm to a pint of water is sometime given to children to promote the eruption of the eruptive m^{or}ta. It has been employed as a collyrium.

Dose of Pulvis Croci, 5 to 30 grains.

Tinctura — is used for colouring.

CROTONIS OLEUM. *Croton Oil*

The oil expressed from the seeds of *Croton Tiglium* (Nat. Ord. *Euphorbiaceæ*), a plant of the East and West Indies. A brownish-yellow liquid. It is a most powerful hydragogue cathartic, and generally speedy in action. *Externally*, it is rubefacient and counter-irritant. It is useful in obstinate constipation, dropsy, apoplexy, paralysis, and in all cases where a speedy relief of the intestines is desired; and in lock-jaw or mania, when the patient cannot or will not swallow. A few drops placed on the tongue will produce almost immediate catharsis. *Locally*, it is applied in neuralgia, rheumatism, inflammation of the chest, and in glandular enlargements.

Solubility.—In ether, olive oil, oil of turpentine.

Vehicle.—Dissolved in castor oil and emulsified with yolk of egg. Mixed with powdered sugar, and placed at the back of the tongue when the patient is insensible or swallowing is otherwise defective. In pill with crumb of bread, compound extract of colocynth, or powdered soap (one minim requires four grains).

Antidote.—Emetic of sulphate of zinc, followed by mucilaginous drinks and opium to check the diarrhoea.

Dose of Oil, 1 to 3 drops.

Linimentum Crotonis as a counter-irritant.

CUBEBAE. *Cubebs*

The dried unripe fruit of *Cubebæ Officinalis* (Nat. Ord. *Piperaceæ*) from Java. It is carminative, stimulant, diuretic. The essential oil is expectorant, carminative, stimulant, but devoid of diuretic properties. The virtue of cubebs, as a remedy in gonorrhœa, depends on its cubebic acid—a soft resin. Its use is almost chiefly confined to the treatment of affections of the genito-urinary organs, especially gonorrhœa. The essential oil is useful in sorethroat and croup.

Vehicle.—The Powder, which should be freshly ground, in wafer capsules, or made into a paste with copaiva or glycerine. The Tincture in sweetened tea, almond emulsion, or tincture of orange. In lozenges (half a grain in each). The Ethereal Extract of the United States' Pharmacopœia in emulsion with acacia in aromatic water, or mixed with powdered sugar.

Dose of Pulvis Cubebæ, 1 to 2 drachms.
Tinctura —, 1 to 2 drachms.
Oleum —, 5 to 20 minims.

JESSE F.

Dr DEU

*CUPRI SUBACETAS.

Subacetate of Copper. Ærugo. Verdigris

A powder or mass of very minute crystals of a dark green colour, having a peculiar sour metallic odour and styptic metallic taste. It is exclusively employed in ointments, plasters, as a stimulant to ulcers, burns, &c., and as an escharotic to warts and corns. It is sometimes mixed with honey and vinegar, and is then called Linimentum Ærugis. The salts of copper are poisonous.

Solubility.—1 in 14 of cold water, 1 in 5 of boiling water, read alcohol.

CUPRI SULPHAS. *Sulphate of Copper*

An oblique prismatic crystal of an azure blue colour, and a styptic metallic taste. In small doses it is astringent to the alimentary canal; and, after absorption, a nerve tonic. In large doses, it is emetic; in excessive doses, poison. *Externally*, it is escharotic; in a dilute form, it is stimulant, astringent, styptic. It is useful in chronic diarrhoea, dysentery, chorea, epilepsy, croup. *Locally*, it is applied to destroy fungous growths, in parasitic cutaneous disease, itch; as a stimulant and astringent, in dilute form to excessive mucous secretions, to ulcers, in affections of eye; as a styptic to bleeding surfaces. It is the most powerful emetic in poisoning by narcotics (5 grains to the ounce of water).

Solubility.—1 in 4 of cold water or glycerine.

Vehicle.—In solution—chloroform, peppermint, cinnamon, or rose water. Water sweetened with syrup of tolu.

Incompatibles.—Astringent vegetables, alkalies and their carbonates, most mineral salts, iodides, &c.

Antidote.—White of egg, albumen, followed by an opiate and poultice to the abdomen.

Dose.— $\frac{1}{2}$ to 2 grains.

*CUPRUM ALUMINATUM. *Vel Lapis Divin*

A compound prepared by fusing together equal p sulphate of copper, nitrate of potassium and alum mixing in a little powdered camphor. *Externally* useful, in a dilute form, to check excessive mucous charges, as leucorrhœa; and as a collyrium in some aff of the eye. The salts of copper are poisonous.

Solubility.—1 in 16 of cold water.

- 1 ℞ Cupri Aluminati, 3j.
Aque destil. ʒiv. Ft. collyrium.
 An Eye Wash.

CURARA. *Woorara*

A brownish-black, shining, resinous mass, supposed the juice of *Strychnos Cogens* (Nat. Ord. *Loganiæ* South America. It contains an alkaloid, Curarin powerful poison used by the Indians of the southern of South America to poison the points of their arrow is a sedative narcotic, and must be applied endermic hypodermically on account of its tardy absorption stomach. It has been injected in tetanus.

Solubility.—Readily in water; sparingly in absolute alcohol.

Dose of Curara, $\frac{1}{2}$ of a grain.

Injectio Curaræ, 1 to 6 minims (Curara 1 grain, distille 12 minims. Let the solution stand for forty-eight and filter).

CURCUMA. *Turmeric

The dried tuber or rhizome of *Curcuma Longa* (Nat. Ord. *Zingiberaceæ*). When powdered it is an intense yellow colour. In India it forms an ingredient in Curry Powder, &c. Unsized white paper steeped in Tincture of Turmeric, when dried, is employed as a test to detect free alkalies. The colour changes from yellow to reddish-brown.

CUSPARIÆ CORTEX. *Cusparia or Angustura Bark*

The bark of *Galipea Cusparia* (Nat. Ord. *Rutaceæ*), from South America. It is stimulant, tonic, febrifuge; in large doses, somewhat emetic and purgative. It is useful in stonic dyspepsia, convalescence from acute diseases, bilious diarrhoea, dysentery, intermittent fevers.

Vehicle.—The Tincture combined with the Infusion, added to some aromatic, as caraway water, syrup of ginger, or compound tincture of cardamom, to prevent nausea.

Incompatibles.—Mineral acids, metallic salts, tannin preparations.

Dose of Pulvis Cuspariæ, 10 to 40 grains.

Infusum ———, 1 to 3 ounces.

Tinctura ———, 1 to 2 drachms (Cusparia 1 ounce, proof spirit 1 pint).

1 ℞ Pulv. Cuspariæ, gr. v.

 In Diarrhœa with Exhaustion and Irritability.
 Dr E. G. CLARK.

CUSO. *Kouso*

The flowers and tops of the *Brayera Anthelmintica* (Nat. Ord. *Rosaceæ*) from Abyssinia. The anthelmintic property of Cusso is due to a resinous principle, Koussin. It is anthelmintic. It is specially useful in the various forms of *Tœnia*. A purgative should be subsequently given to bring away the entozoa.

Solubility.—Koussin, very sparingly in water; readily in alcohol and alkaline solutions.

Vehicle.—The powder in wafer capsule, or with honey as an electuary; with lemonade, or soda and milk afterwards to check any tendency to nausea. An Infusion of Koussin, with bicarbonate of potash added, is an effective remedy. It should be strained and sweetened.

Dose of Pulvis Cusso, $\frac{1}{2}$ to $\frac{1}{2}$ ounce.
 Infusum —, 4 to 8 ounces.

- 1 \mathcal{R} . Cusso pulv. gr. x—xx.
 Mellis Depurat. q. s. Fiat confectio.
 One half early in the morning, the remainder six hours after—for a child of three to seven years.
 In Tœnia Solium.—Dr T. H. TANNER.

*CYDONIUM. *Quince Seed*

The seeds of *Cydonia Vulgaris* (Nat. Ord. *Rosaceæ*). The coriaceous envelope abounds with mucilage. It possesses the demulcent and emollient properties of mucilage of acacia. Its principal use is as a soothing application to inflamed eyes, excoriated and erysipelatous surfaces; and as a vehicle for borax, &c., in ulcerative affections of the mouth and throat. Two drachms of the seeds

will impart a mucilaginous consistence to a pint of boiling water.

CYNARA. *Artichoke

The leaves of common artichoke, *Cynara Scolymus* (Nat. Ord. *Compositae*), yield a bitter juice, which is diuretic, and was formerly given in dropsical complaints. The juice, inspissated to an extract, has been found to give very speedy relief in some cases of rheumatism, both acute and chronic; in gout, and in sciatica. A purgative should precede its use, but care should be taken not to give such doses as will disturb the bowels.

Dose of Extractum Cynaræ, 2 to 3 grains.

Tinctura ———— $\frac{1}{2}$ to 1 drachm. (Fresh leaves 2 lbs., rectified spirit 1 lb.)

- 1 ℞ Ext. Cynaræ, ʒj.

 Syr. Papaveris alb. ʒss.
 Aquæ Camph. ad ʒviij. Misce.
 Two tablespoonfuls every four hours.

In Rheumatic Fever.—Dr E. COPEMAN.

***CYPRIPEIDIN. "*Ladies' Slipper*"**

A brown resinous powder from the root of *Cypripedium Pubescens* (Nat. Ord. *Orchidaceæ*). It is antispasmodic and a nervine stimulant. It is similar in its properties to Valerian,

but less powerful. It is useful in nervous state system, hypochondria, &c.

Vehicle.—In pill with soap.

Dose.—1 to 3 grains.

***DAUCUS CAROTA. Carrot**

The root of the cultivated carrot, *Daucus Carota* (Nat. Ord. *Umbelliferae*), is applied to foul, sloughing, and cancerous sores. If simply scraped, it is stimulant and deodorizing; if boiled and mashed, it is emollient and anodyne. The seeds of the wild carrot (*Daucus Carota* var. *sylvestris*) are stimulant and diuretic. It is useful in dropsy and chronic nephritic affection.

Dose.—30 to 60 grains, or an infusion of half an ounce of the seed in a pint of water may be taken in the course of a day.

***DELPHINIUM STAPHISAGRIA. Stavesacre.**

DELPHINIUM CONSOLIDA. Larkspur. *DELPHINIUM.
Delphine.

Stavesacre seeds, *D. Staphisagria* (Nat. Ord. *Scrophulariaceae*), are emetic, cathartic, and vermifuge; in large doses acting as an irritant poison. They have been used in leprosy, prurigo senilis, and chronic eczema; but the principal use is for destroying lice and for curing the itch, for which purposes *Unguentum Staphisagriae* or *Staphisagria* is used. *Oleum Staphisagriae* is obtained from the seeds by ether. About half the weight of oil is obtained, but the oil contains all the virtues of the seeds. *Delphinium* (D. *Consolida*) have been given in asthma. *Delphinia* is the active principle of the above, and has been used in neuralgic and rheumatic affections and local paralysis, as a substitute for *Veratrum*.

Dose of *Delphinia* $\frac{1}{8}$ to $\frac{1}{4}$ of a grain.

1 ℞ Sem. *Staphisagriae*, ʒss.

DIGITALINUM. *Digitalin*

The active principle of *Digitalis*. It occurs in white, inodorous, porous tubercles or small scales: very bitter to taste. The name has been successively bestowed on widely different principles. It is an unreliable and dangerous remedy, very rarely prescribed. It is said to be a hundred times as strong as the powdered leaves of *Digitalis*.

Solubility.—Readily in spirit and acids. Insoluble in water and pure ether.

Dose.— $\frac{1}{10}$ to $\frac{1}{5}$ grain.

- 1 ℞ Digitalini, gr. $\frac{1}{10}$.
 Sp. Rectif. ʒss.

 In Inflammatory Affections of the Lungs.
 TROUSSEAU and REVEIL.

DIGITALIS FOLIA. *Digitalis Leaf*

The dried leaves of *Digitalis Purpurea*, Fox-G Ord. *Scrophulariaceæ*), from wild indigenous plant narcotic, diuretic, sedative. It is useful in diminishing force and frequency of the heart's action, as in the vascular excitement of some fevers, inflammations, hæmorrhages; in cardiac affections and diseases, in tremens. It acts as a diuretic in cardiac disease. Its action must be carefully watched as it is cumulative. Recently powdered leaves and the fresh infusion are the best preparations. The expressed Juice can be administered for a longer period than the Tincture without nausea.

Vehicle.—The freshly-powdered leaf in pill with glycerine of The Infusion sweetened with chloroform, or syrup of tolu, orange.

Incompatibles.—The preparations of cinchona, sulphate and perchloride of iron.

Antidote.—The recumbent posture, emetics, stimulants, hot tea.

Dose of Pulvis Digitalis, $\frac{1}{2}$ to $1\frac{1}{2}$ grains.

Infusum ———, $\frac{1}{2}$ to $\frac{1}{2}$ ounce.

Tinctura ———, 10 to 30 minims.

*DUBOISIA

An alkaloid obtained from the leaves of *Duboisia* (Nat. Ord. *Solanaceæ*), from Australia. resembles that of Atropia, but differs in that prompt and energetic, in causing less sensatio in the throat, and in the absence of conjunctiv It is useful in ophthalmic practice in keratitis, c and other inflammatory and painful states of t

Vehicle.—Gelatine discs, or solution of its sulphate for o
Antidote.—As for atropia.

*DUGONG OIL

An oil, semi-solid at ordinary temperatures, of an Australian herbivorous cetaceous animal.

little odour or taste when fresh. It has been introduced as a substitute for cod-liver oil. Its use is limited, as it is far more expensive.

DULCAMARA. *Dulcamara*

The dried twigs of *Solanum Dulcamara* (Nat. Ord. *Solaceæ*). It is also known as Woody Nightshade and Bittersweet. It is alterative, feebly narcotic, but specially diuretic and sudorific. It is useful in scrofula, chronic rheumatism, and bronchitis. It is chiefly prescribed in obstinate cutaneous disorders, especially those of a scaly character, as ichthyosis, psoriasis, lepra, &c.

Vehicle.—The Infusion with syrup of orange or ginger.

Dose of Infusum Dulcamaræ, 1 to 2 ounces.

*Extractum ———, 5 to 10 grains.

A Hydragogue Cathartic.—ST. MARY'S I

ELEMI. *Elemi*

A concrete resinous exudation imported from Manilla. Its botanical source is undetermined. It is used as a stimulant topical application, and resembles Turpentine in its action. The only official preparation is Unguentum Elemi.

ERGOTA. *Ergot*

The sclerotium (compact mycelium or spawn) of *Claviceps Purpurea*, produced within the paleæ of the common rye, *Secale Cereale*. It occurs in grains, somewhat triangular in form, furrowed on two sides, of a brown or purple colour, with some bloom, and having a faint odour. It is a special ecbolic, causing powerful contractions, especially in the pregnant state. It also acts on the muscular coats of the vessels of the general system. It is given to hasten parturition when simply retarded by insufficient uterine action. It is useful in hæmorrhage from the lungs, kidneys, uterus, and other organs; in albuminuria, whooping-cough, amenorrhœa; in mucous discharges, as gleet and leucorrhœa; in some conditions of mania, paraplegia, and affections of the spinal cord. It is also employed both internally and hypodermically to expel fibroid and other growths from the uterus. A long continued administration is said to produce gangrene. In active hæmorrhages, the action of Ergot is accelerated by the addition of *Liquor Strychniæ*. Ergotine, or better, Ergotin, is generally understood to refer to an aqueous extract of soft pilular consistence, reddish-brown colour, bitter, pungent taste, and roastmeat-like smell, prepared by *Bonjean* or *Wigger*. It contains the active principles of Ergot.

Vehicle.—The fresh powder in wafer capsule. The Fluid Extract in chloroform water, or orange-flower water with syrup, or in beef tea. Ergotin (*Bonjean's*) dissolved in water, or made into pills with liquorice powder and enclosed in gelatine capsules.

Incompatibles.—Astringents. Metallic salts.

Dose of Pulvis Ergotæ, 20 to 30 grains.

Infusum —, 1 to 2 ounces.

Tinctura —, 10 to 60 minims.

Dose of Extractum Ergotæ Liquidum, 10 to 80 minims.

*Ergotin, 1 to 5 grains: for hypodermic injectio

Bonjean's Ergotin is the best preparation for the hytion of Ergot. Twelve grains may be dissolved in a d water. Five to ten minims may be injected every three c

*ERIGERON. *Flea-bane*

Canada flea-bane, Erigeron Canadense (Nat. Ord. *Compositæ*), is diuretic, tonic, and astringent; and is given in dropsical complaints and diarrhoea. The Oil is esteemed as an internal remedy in uterine and other hæmorrhages.

Dose.—5 minims every two hours.

*EUCALYPTUS GLOBULUS. *The Blue Gum Tree*

The leaves and bark of Eucalyptus Globulus (Nat. Ord. *Myrtaceæ*) from Australia. Eucalyptol, a volatile liquid,

is a purified preparation obtained from the oil by distillation. Eucalyptus is antiperiodic, febrifugant, anthelmintic, antiseptic. It is useful in fevers, malarial diseases, general atony and anæm ulceration, bronchial and asthmatic affections. When given in alcoholic solution as an anthelmintic, it is preferable to carbolic acid, as it is tating and non-poisonous. It is used in dressin the form of spray and inhalations.

Vehicle.—The Tincture with mucilage in sweetened orange- The Oil in sugar, or emulsified with acacia and syrup added, sion of almonds. For Inhalation, the oil in water with a hal light carbonate of magnesia, to be added to hot water. The into cigarettes for smoking in asthma.

Dose of Tinctura Eucalypti Globuli, $\frac{1}{2}$ to 1 drachm.

Extractum ———— Liquidii, 10 to 60 minims.

Spiritus ————, 10 to 60 minims.

Syrupus ————, 1 to 4 drachms.

*EUONYMINUM. *Euonymin.*

A resinoid body obtained from one or two *Euonymus* (Nat. Ord. *Celastraceæ*) of America mild aperient, expectorant, and diuretic. It is recommended in habitual constipation, and as reliable hepatic stimulant. It should be taken at followed by a saline aperient in the morning.

Vehicle.—The Resin in pill, with confection of rose. The water.

Dose of Euonyminum as an aperient, 1 to 2 grains; as a and diuretic, $\frac{1}{2}$ to 1 grain.

Tinctura Euonymini, 1 to 2 drachms.

FARINA TRITICI. *Wheaten Flour*

The grain of Wheat, ground and sifted, of *Triticum vulgare* (Nat. Ord. *Graminaceæ*) is used only in Cataplasma Fermenti. Mixed with honey it is a valuable application for boils. Bran bread and biscuits, and those of Gluten are given to diabetic patients.

Cataplasma Panis (bread grated, boiling water a sufficiency).

Boil for a minute, and then allow to cool. To be applied with a camel-hair pencil, and covered with a soft rag.

In Ulcers of the Leg in the Aged.—MR PHILIP COWEN.

FEL BOVINUM PURIFICATUM. *Purified Ox Bile*

A mass of pill consistence prepared, by evaporation from fresh gall of the Ox and rectified spirit. It is tonic, laxative, deobstruent. It is useful in dyspepsia attended with vomiting, obstinate constipation, disorders connected with a deficiency of bile, and in alleviating the pain of cancerous diseases. It is said to prevent the constipating and other undesirable effects of opium when combined with that drug.

Solubility.—In water and spirit. Insoluble in ether.

Vehicle.—Milk. In pill with aloes; or powdered tragacanth to give consistence, the pills being coated or enclosed in gelatine capsules, or coated with tolu dissolved in ether.

Dose of the inspissated Fresh Gall, 5 to 10 grains.

*DUBOISIA

An alkaloid obtained from the leaves of *Duboisia Myoporoides* (Nat. Ord. *Solonaceæ*), from Australia. Its action resembles that of *Atropia*, but differs in that it is more prompt and energetic, in causing less sensation of dryness in the throat, and in the absence of conjunctival irritation. It is useful in ophthalmic practice in keratitis, corneal ulcer, and other inflammatory and painful states of the eye.

Vehicle.—Gelatin discs, or solution of its sulphate for ophthalmic use.
Antidote.—As for *atropia*.

*DUGONG OIL

An oil, semi-solid at ordinary temperatures, obtained from an Australian herbivorous cetaceous animal. It has very

little odour or taste when fresh. It has been introduced as a substitute for cod-liver oil. Its use is limited, as it is far more expensive.

DULCAMARA. *Dulcamara*

The dried twigs of *Solanum Dulcamara* (Nat. Ord. *Solanaceae*). It is also known as Woody Nightshade and Bittersweet. It is alterative, feebly narcotic, but specially diuretic and sudorific. It is useful in scrofula, chronic rheumatism, and bronchitis. It is chiefly prescribed in obstinate cutaneous disorders, especially those of a scaly character, as ichthyosis, psoriasis, lepra, &c.

Vehicle.—The Infusion with syrup of orange or ginger.

Dose of Infusum Dulcamaræ, 1 to 2 ounces.

*Extractum ———, 5 to 10 grains.

1 ℞. Decocti Dulcamaræ, ℥ 3xj.

 Decocti Malvæ co. ana Oss. Fiat lotio.

In Skin Diseases with much Irritation.—Dr HOOPER.

ECBALII FRUCTUS. *Squirting Cucumber Fruit*

The nearly ripe fruit of *Ecbalium Officinarium* (Nat. Ord. *Cucurbitaceæ*). It is used to prepare Elaterium.

ELATERIUM. *Elaterium*

A sediment from the expressed juice of the fruit of *Ecbalium Officinarium* (Nat. Ord. *Cucurbitaceæ*). Elaterin is the active principle. It is a powerful hydragogue cathartic. In over doses, it is an irritant poison. It is useful

in obstinate constipation, but is chiefly prescribed in renal and cardiac dropsy. It should be very cautiously given in debilitated states of the system.

Vehicle.—In pill, with extract of henbane or gentian, and powdered capsicum to prevent nausea.

Antidotes.—Emollient drinks, enemata, warm baths, opium in repeated small doses.

Dose of Elaterium, gr. $\frac{1}{4}$ to $\frac{1}{2}$.

Pulvis Elaterii comp. $\frac{1}{4}$ to 5 grains.

*ERIGERON. *Flea-bane*

Canada flea-bane, *Erigeron Canadense* (Nat. Ord. *Compositæ*), is diuretic, tonic, and astringent; and is given in dropsical complaints and diarrhœa. The Oil is esteemed as an internal remedy in uterine and other hæmorrhages.

Dose.—5 minims every two hours.

*EUCALYPTUS GLOBULUS. *The Blue Gum Tree*

The leaves and bark of *Eucalyptus Globulus* (Nat. Ord. *Myrtaceæ*) from Australia. *Eucalyptol*, a volatile liquid,

is a purified preparation obtained from the oil by fractional distillation. Eucalyptus is antiperiodic, febrifuge, stimulant, anthelmintic, antiseptic. It is useful in intermittent fevers, malarial diseases, general atony and anæmia, gastric ulceration, bronchial and asthmatic affections. The oil has been given in alcoholic solution as an anthelmintic. *Externally*, it is preferable to carbolic acid, as it is non-irritating and non-poisonous. It is used in dressings, and in the form of spray and inhalations.

Vehicle.—The Tincture with mucilage in sweetened orange-flower water. The Oil in sugar, or emulsified with acacia and syrup added, or in emulsion of almonds. For Inhalation, the oil in water with a half quantity of light carbonate of magnesia, to be added to hot water. The Leaves made into cigarettes for smoking in asthma.

Dose of Tinctura Eucalypti Globuli, $\frac{1}{4}$ to 1 drachm.
Extractum ———— *Liquidi*, 10 to 60 minims.
Spiritus ————, 10 to 60 minims.
Syrupus ————, 1 to 4 drachms.
Eucalyptol, 5 to 10 minims.

In Ague.—*

*EUONYMINUM. *Euonymin*.

A resinoid body obtained from one or two species of *Euonymus* (Nat. Ord. *Celastraceæ*) of America. It is a mild aperient, expectorant, and diuretic. It is especially recommended in habitual constipation, and as being a reliable hepatic stimulant. It should be taken at night, and followed by a saline aperient in the morning.

Vehicle.—The Resin in pill, with confection of rose. The Tincture in water.

Dose of Euonyminum as an aperient, 1 to 2 grains; as an expectorant and diuretic, $\frac{1}{4}$ to 1 grain.
Tinctura Euonymini, 1 to 3 drachms.

FARINA TRITICI. *Wheaten Flour*

The grain of Wheat, ground and sifted, of *Triticum vulgare* (Nat. Ord. *Graminaceæ*) is used only in Cataplasma Fermenti. Mixed with honey it is a valuable application for boils. Bran bread and biscuits, and those of Gluten are given to diabetic patients.

Cataplasma Panis (bread grated, boiling water a sufficiency).

Boil for a minute, and then allow to cool. To be applied with a camel-hair pencil, and covered with a soft rag.

In Ulcers of the Leg in the Aged.—MR PHILIP COWEN.

FEL BOVINUM PURIFICATUM. *Purified Ox Bile*

A mass of pill consistence prepared, by evaporation from fresh gall of the Ox and rectified spirit. It is tonic, laxative, deobstruent. It is useful in dyspepsia attended with vomiting, obstinate constipation, disorders connected with a deficiency of bile, and in alleviating the pain of cancerous diseases. It is said to prevent the constipating and other undesirable effects of opium when combined with that drug.

Solubility.—In water and spirit. Insoluble in ether.

Vehicle.—Milk. In pill with aloes; or powdered tragacanth to give consistence, the pills being coated or enclosed in gelatine capsules, or coated with tolu dissolved in ether.

Dose of the inspissated Fresh Gall, 5 to 10 grains.

FERRUM. Iron

The preparations of iron act as hæmatinics or blood restorers. Their general operation is that of a tonic. Some have a direct influence on the nervous system; others are astringent, emmenagogue, styptic. They are given in anæmia, nervous affections, amenorrhœa, passive hæmorrhages, and in skin disease. They usually raise the tone of the pulse, heighten the complexion, and promote the secretions. They cause more or less constipation, and the

motions are blackened. Their administration discolours the teeth and stains the tongue. They are contra-indicated in acute inflammatory affections. Headache, or a sense of fullness in the head, is a sign that they do not agree, or have been pushed too far. *Externally*, some are employed to arrest hæmorrhage.

FERRI ACETATIS TINCTURA

Tincture of Acetate of Iron

A deep brown compound prepared from persulphate of iron and acetate of potash. It is tonic. A pleasant form of iron for internal administration.

Vehicle.—Chloroform water.

Dose of Tinctura Ferri Acetatis, 5 to 30 minims.

*Vinum ———, 1 to 2 drachms

1 ℞ Tinct. Ferri Acetat. m.x.
Aque Chlorof. ad ʒj. M. Ft. haust.

A Tonic.—*

FERRI ALBUMINAS. *Albuminate of Iron*

Transparent golden-yellow scales, the product of albumen (egg) with iron, of which it contains $3\frac{1}{2}$ per cent. An elegant tonic.

Solubility.—Readily in warm water after the addition of a little hydrochloric acid.

Vehicle.—In effervescence with bicarbonate of potash and citric acid, or in acidulated sweetened water or chloroform water.

Dose.—Ad libitum.

*TINCTURA FERRI AMMONIO-CHLORIDI

Tincture of the Ammonio-chloride of Iron

A mixture of the hydrochlorates of ammonia and iron. It is rarely prescribed. It is astringent, tonic, and emmenagogue.

Dose of Ferri Ammonio-chloridum, 3 to 15 grains.

Tinctura Ferri Ammonio-chloridum, $\frac{1}{4}$ to 1 drachm.

FERRI ARSENIAS. *Arseniate of Iron*

An amorphous powder, of a green colour, and tasteless. It is tonic and alterative. It is useful in herpetic and scaly diseases of the skin, chronic eczema, psoriasis, lupus, lichen, elephantiasis. *Externally*, it is applied as a caustic to cancerous ulcers. Its action must be watched, as it is liable to be absorbed.

Solubility.—Readily in hydrochloric acid. Insoluble in water.

Vehicle.—In pill with manna.

Antidote.—See Acidum Arseniosum.

Dose.— $\frac{1}{12}$ to $\frac{1}{2}$ grain, in pill.

FERRI CARBONAS SACCHARATA

Saccharated Carbonate of Iron

Small lumps of a grey-brown colour, of a sweet and somewhat chalybeate taste, prepared by mixing carbonate of iron with peroxide of iron and sugar. It is a valuable chalybeate and tonic. It is useful in anæmia, amenorrhœa, and in the debility of young children. The mixture is a valuable adjuvant to the Compound Decoction of Aloes.

Vehicle.—In wafer capsules.

Incompatibles.—Vegetable astringents, acids, and acidulous salts

Dose of Ferri Carbonas Saccharata, 5 to 20 grains.

Mistura Ferri Composita (contains carbonate of iron, &c.), as a stimulating tonic, 1 to 2 ounces.

Pilula Ferri Carbonas, 5 to 20 grains.

* FERRI DIALYSATI LIQUOR

Solution of Dialysed Iron

An aqueous solution of hydrate of iron, almost free from combined acid. It is astringent and styptic. Each fluid drachm contains about two grains of oxide of iron,

Dose.—10 to 30 minims.

FERRI ET AMMONIÆ CITRAS

Citrate of Iron and Ammonia

Occurs in thin transparent scales of a deep red colour somewhat sweet and astringent in taste. It is an effective hæmatinic and tonic. It is useful in all cases where the stomach is too debilitated to receive an astringent preparation.

Solubility.—2 in 1 of water, 1 in 1 of glycerine.

Vehicle.—In effervescence with bicarbonate of potash and citric acid, in water flavoured with syrup of lemons or tolu.

Incompatibles.—Vegetable astringents, mineral acids.

Dose of Ferri et Ammonia Citras, 5 to 10 grains.

FERRI ET QUININÆ CITRAS

Citrate of Iron and Quinine

Occurs in thin scales of a greenish, golden-yellow colour, somewhat deliquescent. It is tonic, antiperiodic, and chalybeate, combining the properties of iron and quinine. Six grains contain one grain of quinine.

Solubility.—8 in 1 of water, 1 in 1 of glycerine.*Vehicle.*—In effervescence with bicarbonate of potash and citric acid, the iron salt being first mixed with the acid portion. Chloroform water.*Incompatibles.*—Vegetable astringents, alkalies and their carbonates.*Dose of Ferri et Quinæ Citras*, 5 to 10 grains.

- 2 ℞ Ferri et Quin. Cit. gr. x.
 Aque Chlorof. ʒj. M. ft. haustus.

In Debility.—*

FERRI IODIDUM. *Iodide of Iron*

Occurs in greenish-black crystalline masses, inodorous and deliquescent. It is tonic, alterative. It is a valuable remedy in scrofula, phthisis, syphilis, rheumatoid arthritis.

Solubility.—1 in 1 of water and glycerine.

Vehicle.—Glycerine, which has the property of dissolving and preserving iodide of iron. In pill coated with gelatine or tolu. Blancard's pills, or those of the U. S. Pharm., are very efficient.

Incompatibles.—Vegetable astringents, alkalies and their carbonates, acids, &c.

The salt and the simple solution are very unstable, and should not be prescribed. The B. P. Syrup or a Glycerate is a suitable liquid preparation. The following formula is recommended:—Iodine 70 parts, iron 35 parts, glycerine 400 parts, each 5 grains by weight of this solution contains one grain of iodide of iron.

Dose of Ferri Iodidum, 1 to 5 grains.

Pilula Ferri Iodidi (1 gr. of iodide of iron in 3½ grs.), 3 to 8 grains.

Syrupus———— (4½ grs. of iodide of iron in each drachm), 20 to 60 minims.

H.

FERRI PERCHLORIDI FORTIOR LIQUOR

Stronger solution of Perchloride of Iron

A reddish-brown solution, prepared by dissolving iron wire in hydrochloric acid and subsequent peroxidation the proto-salt by nitric acid. It is rarely given internally, but its preparations are most valuable remedies. It is a powerful topical astringent and styptic. It is a useful application in hæmorrhages, nævi, diphtheritic sorethroat, indolent ulcers. The application of a neutral solution is recommended.

Liquor Ferri Perchloridi, a pale brown preparation of strong solution of perchloride of iron in distilled water. It is introduced to save the expense of the spirit used in the Tincture.

Vehicle and Incompatibles.—*Vide* Tinct. Ferri Perchloridi.

Dose.—10 to 30 minims.

Tinctura Ferri Perchloridi, a light brown mixture of strong solution of perchloride of iron and rectified spirit. The most valuable preparation of iron. It is an astringent, tonic, diuretic, styptic. It is useful in anæmia, chlorosis, epilepsy, acute rheumatism, albuminuria, diabetes, glaucoma, atony of the bladder, passive hæmorrhages.

Vehicle.—In water with syrup of orange-peel or syrup of tolu; or with equal parts of spiritus limonis and water; or with the above flavouring ingredients, and infusion of quassia or calumba as a diluent instead of water.

Incompatibles.—Vegetable astringents, mucilage, alkalies and their carbonates.

Dose.—10 to 30 minims.

Syr. simpl. ℥ ʒxx.

Inf. Calumbæ, ʒj. M. Ft. haust.

In Chlorosis.—*

FERRI PEROXIDUM HUMIDUM

Moist Peroxide of Iron

A soft pasty mass of a reddish-brown colour, obtained by mixing solution of persulphate of iron with excess of caustic soda solution. It is not employed as an iron preparation. It is a valuable antidote to arsenic.

Solubility.—Readily in hydrochloric acid, without heat.

In poisoning by arsenic, a dose to twelve times the supposed quantity of arsenic taken may be given.

* *Dose*.—2 to 4 drachms.

FERRI PEROXIDUM HYDRATUM

Hydrated Peroxide of Iron

A reddish-brown powder, tasteless, obtained by drying moist peroxide of iron. A tonic possessing the same properties as the magnetic oxide. The Emplastrum is employed to give mechanical support to relaxed muscles.

Solubility.—Slowly in hydrochloric acid and water by the aid of heat.

Dose of Ferri Peroxidum Hydratum, 5 to 30 grains.

Emplastrum Ferri is used as a strengthening plaster.

M. et div. in pulv. 30. Sum. j inter cibos nocte manequ.

In Diarrhœa combined with Anæmia.

TROUSSEAU and REVEIL.

FERRI PHOSPHAS. *Phosphate of Iron*

An amorphous powder of a bluish colour. It is a nervine tonic. It is useful in anæmic amenorrhœa, diabetes, rickets, and some forms of dyspepsia. It is said to diminish ravenous appetite and to stimulate the digestive powers.

Stability.—In acids; insoluble in water.

Vehicle.—The Powder in pill with manna. The different Syrups.

Dose of Ferri Phosphas, 5 to 10 grains.

Syrupus Ferri Phosphatis (1 grain in 1 fluid drachm), 1 to 4 drachms.

*Syrupus Ferri Hypophosphitis (3 grains of the hypophosphite in each fluid drachm), 1 drachm.

*Syrupus Ferri Phosphatis cum Quiniâ et Strychniâ or Easton's Syrup (1 grain of phosphate of iron and quinine, and $\frac{1}{4}$ grain of phosphate of strychnia in each fluid drachm), 1 drachm.

*Syrupus Ferri Phosphatis cum Manganedio ($\frac{1}{2}$ grain of phosphate of iron, $\frac{1}{2}$ grain of phosphate of manganese in each fluid drachm), 1 drachm.

*Syrupus Ferri Phosphatis comp., or Parrish's chemical food (contains the phosphates of iron, lime, soda, and potash), 1 to 2 drachms.

To be sprinkled on the surface of the sore.

In Open Cancers.—Dr R. REECH.

FERRI SULPHAS. *Sulphate of Iron*

Crystals of pale bluish-green prisms. It is a powerful astringent, tonic, antiperiodic, and emmenagogue. It is apt to irritate the stomach. The granulated form is the purest and most stable remedy.

Solubility.—1 in 2 of water; insoluble in alcohol and proof spirit.

Vehicle.—In pill with manna.

Dose of Ferri Sulphas, 3 to 5 grains.

Ferri Sulphas Exsiccata, $\frac{1}{4}$ to 3 grains.

Liquor Ferri Persulphatis is used for making several preparations of iron; it is a good styptic.

FERRI SULPHAS GRANULATA

Granulated Sulphate of Iron

Small granular crystals of a pale-green colour, obtained from iron wire, sulphuric acid, rectified spirit, and distilled water. It has the same therapeutic properties as sulphate of iron, but is a purer and more stable remedy.

Solubility.—1 in 2 of water. Insoluble in rectified spirit.

Vehicle.—In pill, with manna.

Dose.—3 to 5 grains.

•**FERRI VALERIANAS.** *Valerianate of Iron*

A dark brick-red powder. It is a tonic and antispasmodic. It is useful in hysteria, asthma, pseudo-croup, chorea, neuralgia.

Solubility.—1 in 2 of rectified spirit. Insoluble in water.

Vehicle.—In pill with manna.

Dose.—2 to 4 grains.

- 1 ℞ Ext. Hyoscyam. ʒss.
 Ferri Valerianat. ʒj.
 M. Div. in pil. xxx. quarum date unam ter die.
 In Chorea and Neuralgia.—Dr H. GREEN.

- 2 ℞ Ferri Valerianatis, gr. xij.
 Ol. Sabinæ, mxij.
 Mannæ, q. s.
 Fiant pilulæ sex, quarum capiat unam ter in die.

In Chorea and other Nervous Disorders.—Dr NELIGAN.

FERRUM REDACTUM. *Reduced Iron*

Metallic iron, in the form of a fine greyish-black powder, containing about 50 per cent. of the magnetic oxide of iron. It is tonic, and one of the most powerful hæmatinics. It is useful in chorea, chlorosis, amenorrhœa, enlarged spleen following intermittent fever, and generally in debilitated states of the system where iron can be administered. It is a convenient preparation for children, being almost tasteless.

Vehicle.—In pill with manna. On bread and butter for children. In wafer capsule. Lozenges.

Dose of Ferrum Redactum, 1 to 5 grains.

Trochisci Ferri Redacti, 1 to 6 lozenges.

- 1 ℞ Ferri Redact. gr. iij.
 Pulv. Acaciæ, gr. vj.
 Crete præp. gr. xj.

To be given in water slightly acidulated with dilute sulphuric acid.

As an Antidote for Corrosive Sublimata.—Dr BUCKLER.

℞ Ferri Redacti vel
Ferri Peroxidi Hydrati, ʒss.
Bismuthi Subnit. ʒv.
Ext. Opii, gr. iij.

Syrupi, q. s. M. et div. in pil. 125.
One to ten daily, during meals.

In Chlorosis, &c.—TROUSSEAU and REVEIL.

℞ Ferri Redacti,
Pepsinæ Porci, ʒʒ gr. j.
Glyc. Tragacanth q. s. Ft. pil. in argent.

In Anæmia.—*

FERRUM TARTARATUM. *Tartarated Iron*

cales of a deep garnet colour. It is tonic and hæmatinic, ilar to the ammonia-citrate. The Wine is a valuable paration in marasmus and the wasting diseases of children. efficiency is increased by the addition of cod-liver oil.

solubility.—1 in 1 of water or glycerine.

action.—In effervescence with bicarbonate of potash and citric acid.

compatibles.—All astringent vegetable preparations, mineral acids, &c. can be prescribed with alkalies.

uses of Ferrum Tartaratum, 5 to 10 grains.

Vinum Ferri, 1 to 4 drachms.

℞ Ferri Tartarat. gr. v.
Potass. Bicarb. gr. v.
Tinct. Digitalis, mxx.
Inf. Calumbæ, ʒj. Misce.

To be taken three times a day.

In Cardiac Debility.—Dr J. M. FOTHERGILL.

℞ Ferri Tart. gr. vj.
Pulv. Cinnamomi co. gr. ij.

Misce: fiat pulvis ter die sumendus.

As a Tonic for Children.—Dr G. GREGORY.

℞ Ferri Tart. ʒss.
Pulv. Calumbæ, gr. xij.
Pulv. Cinnam. co. gr. iv.

Misce, fiat pulvis, ter quotidie sumendus.

Dr JOY.

℞ Ferri Tart. gr. ij.
Pulv. Cinnam. co. gr. iss.
Sacchari albi, gr. ij.

Misce: fiat pulvis, ter quaterve in die sumendus.

As a Tonic for Children.—Drs EVANSON and MAUNSELL.

Dose of Pulvis Filicis Maris, 1 to 3 drachms.

Extractum Filicis Liquidum, 15 to 30 minims.

*Mel Filicis Maris (liquid extract 30 minims, honey $\frac{1}{2}$ oz.), $\frac{1}{2}$ to 2 drachms.

- 1 ℞. Ext. Filicis Liquid, ℥x—xx.
 Syr. Zingib. 3ss—j.
 Mucil. Tragacanth, ʒj—ij.
 Aquæ, ʒj—ij. Fiat haustus.

To be taken early in the morning; four hours after, a purge—for a child of five to ten years.

In Tænia Solium.—Dr T. H. TANNER.

- 2 ℞. Ext. Filicis Liquid, ℥xxx.
 Mist. Amygdalæ, ʒij.

Fiat emulsio, et divide in partes æquales ij. quarum sumatur una hora somni, et altera mane sequente. [An active cathartic to be given in four hours after the second dose if it do not purge.]

Dr NELIGAN.

- 3 ℞. Ext. Filicis Liquid. 3ss.
 Mellis Rosæ, 3ss.

Take half on going to bed, the other half in the morning, fasting. [To be followed by a cathartic.]

Dr DUNGLISON.

FŒNICULI FRUCTUS. *Fennel Fruit*

The fruit of *Fœniculum Dulce* (Nat. Ord. *Umbelliferae*), from Malta. It is aromatic, carminative, stimulant, tonic. It is useful in the flatulent disorders of childhood, and as a vehicle for less agreeable remedies. A decoction is often employed in the form of enema for the flatus of infants. Its valuable properties are due to the presence of a volatile oil in the pericarp.

Vehicle.—As for *Anethum*.

Dose of Aqua Fœniculi, 1 to 2 ounces.

*The powdered seeds, 10 to 30 grains.

- 1 ℞. Rad. Fœniculi,
 Sem. Fœnicul. ana ʒij.

Concisa contunde, et misce. [Two or three spoonfuls to be boiled for some time in a quart of water, and the strained decoction taken by glassfuls.]

To promote the Secretion of Milk.—RADIUS.

*FRAXINUS. *The Ash*

The bark of *Fraxinus Excelsior* (Nat. Ord. *Oleaceæ*), the common ash, has been used as a substitute for cinchona in larger doses; and the leaves have been proposed as a substi-

tute for senna. More recently the leaves have been highly commended for the cure of rheumatism, rheumatic gout, &c. For the latter purpose a drachm of the leaves, gathered in June and carefully dried and pulverised, is infused in a pint of boiling water till cold, and strained. Of this infusion a teacupful may be taken twice a day. As a purgative, half an ounce is infused for a dose. It has been proved that the leaves contain 16 per cent. of malate of calcium, hence it is supposed their virtue as an antiarthritic.

*FUCUS

For *Fucus Crispus*, Irish Moss, see *CHONDRUS CRISPUS*.

Fucus Vesiculosus, bladder sea-wrack, was formerly used in obesity, goitre, and scrofulous affections. The fresh fucus, bruised, is applied to scrofulous tumours.

Vehicle.—In pills prepared from an evaporated extract. Syrup.

Dose of Extractum Fuci Crispi Liquidum, 1 drachm.

Fucus (Gigartina) Helminthocorton is given to expel worms, especially lumbrici.

1 ℞ Helminthocorti, ʒss. Coque cum
Aque puræ, ʒvj, et cola.
Colaturæ, ʒiv, adde
Mellis despumati, ʒj.

Two spoonfuls morning and evening.

In Worms.—SCHUBARTH.

*FULIGO LIGNI. Wood-soot. *FULIGOKALI

The use of wood-soot is nearly obsolete in this country, but it seems to be a favourite remedy with some practitioners on the Continent. The more shining portions are selected. It is given in hysterical affections, chronic rheumatism, catarrh of the bladder, &c. *Externally*, it is applied in itch, various skin diseases, and to cancers. In chronic eruptions the crust should first be removed by emollient applications, &c. It has also been recommended as an application to burns.

Fuligokali is prepared from wood-soot in a similar manner to *Anthrakokali*, and is prescribed in similar cases and doses.

- 1 ℞. Fulig. ligni, ʒj ad ʒiiss.
 Coffeæ tostæ, ʒiiss.
 Aquæ ferventis, ʒij.
 Macera per horam, cola, et adde
 Syr. Absinthii co. ʒx.
 To be taken in four doses.

To destroy Lumbrici.—M. TROUSSEAU.

- 2 ℞. Ext. Fuliginis Aquosi, gr. iv.
 Fiat pilula, ter quaterve die sumenda.

In Catarrh of the Bladder.—RADIUS.

- 3 ℞. Fulig. ligni, ʒj.
 Adipis, ʒij. Fiat unguentum.

In Favus and Alopecia.—Dr BURGESS.

- 4 ℞. Fulig. ligni,
 Adipis, ana ʒss.
 Ext. Belladonnæ, ʒj. Misce exacte.

Applied on Lint to Cancers.—BLAUD.

- 5 ℞. Fulig. ligni, ʒj.
 Aquæ, ʒv.
 Coque per quartam partem horæ, et cola. Fiat enema.

In Ascarides.—M. TROUSSEAU.

- 6 ℞. Fuligokali, gr. xv—xxx.
 Adipis, ʒj. Tere simul ut fiat unguentum.

In Obstinate Cutaneous Affections.—GIBERT.

*FUMARIA. *Fumitory*

Fumitory, *Fumaria Officinalis* (Nat. Ord. *Fumariaceæ*), is little used; yet most valuable therapeutic properties have been attributed to it. It has been given in jaundice, diseases of the eyes, scorbutic complaints, and severe chronic affections of the skin. Cullen found it useful in lepra, as well as in less intractable cutaneous diseases.

Dose of Pulvis Fumaris, 10 to 40 grains.

An inspissated Juice and an Extract of the dried leaves have also been used.

- 1 ℞. Fumaris sic. manip. j.
 Rad. Taraxaci, ʒj.
 Rad. Glycyrrhizæ, ʒss.
 Aquæ, Oij. Coque ad Oj, et cola.

A cupful to be taken two or three times a day.

In Obstinate Cutaneous Diseases.—Dr T. CASTLE.

GALBANUM. *Galbanum*

An oleo-gum resin, in masses of translucent greenish-yellow tears, obtained from an unascertained umbelliferous plant from India and the Levant. It is a stimulant, expectorant, antispasmodic, resolvent. It is seldom prescribed by itself, but is conjoined with aloes and chalybeates, in amenorrhœa and sluggish bowels; with expectorants, in chronic affections of the bronchial mucous membranes, and with other fetid remedies in hysterical and spasmodical complaints. *Externally*, it is applied to promote resolution or suppuration. As a medicine, galbanum may be regarded as intermediate between ammoniacum and assafoetida.

Dose of Galbanum, 5 to 20 grains.

Pilula Galbani co., now designated Pil. Assafoetida co., 5 to 10 grains

*Tinctura —(galbanum 1 ounce, proof spirit 1 pint), 1 to 8 drachms.

Emplastrum Galbani is applied to indolent swellings.

- 1 ℞. Pil. Galbani co.

 Potass. Sulphat. ana ʒj.
 Galbani,
 Assafoetidæ, ana ʒiiss.
 Ext. Gentianæ, ʒij.
 Pil. Aloes cum Myrrha, ʒiiij.
 Theriacæ, q. s.

Contunde in massam, et divide in pil. 150, quarum capiat duas vel tres bis terve quotidie.

In Chlorosis with Anæmia and Palpitation.—Dr COPLAND.

- 3 ℞. Empl. Galbani, ʒiiij.
 Camphoræ, ʒss.
 Opii pulv. ʒj.
 Ol. Carui, mxx. Fiat emplastrum.

In Tormina in Infants.—Dr R. REECE.

*GALIUM APARINE.

The juice and decoction of common cleavers or goose-grass. Galium Aparine (Nat. Ord. *Galiaceæ*), have long been used

a aperient, diuretic, and antispasmodic remedy, especially be treatment of dropsy, scrofula, scorbutic eruptions, gestion of the spleen, &c. An ointment made from the herb is applied to glandular and scrofulous swellings, to ameliorate the condition of cancerous and foul rs. The dose of the expressed juice is 4 ounces three s a day. Recently its use has been revived as a remedy cutaneous diseases in the following form:

℞. Galii Aparinis, manip. ampl. j.

Aquæ, Oij.

que per tertiam partem horæ, et cola. Half a pint to be taken three a day.

In Lepra.—Dr WINN.

GALLA. *Galls*

The excrescences on the Dyers' Oak, *Quercus Infectoria* t. Ord. *Cupuliferæ*), caused by the punctures and deposition of *Diplolepis Gallæ-tinctoria*, from the Mediterranean. They are tonic, antiperiodic, and powerfully astringent, containing from 60 to 70 per cent. of tannin or tannic l, and from 3 to 5 per cent. of gallic acid. *Externally*, y are styptic. They are useful in pulmonary, renal, sine, and other hæmorrhages, and in excessive mucous other discharges. *Locally*, in infusions or decoctions, y are used in astringent gargles, lotions, and injections; an ointment prepared with finely pulverised galls is lied in hæmorrhoids.

Solubility.—1 in 40 of boiling water.

Vehicle.—The Tincture in water and glycerine.

compatibles.—Infusions of cinchona, calumba, casparia, the mineral s, salts of iron and lead, &c.

Dose of Pulvis Gallæ, 8 to 20 grains.

Tinctura —, $\frac{1}{2}$ to 2 drachms.

*Decoctum —, $\frac{1}{2}$ to 1½ ounce; and is a useful astringent lotion to arrest bleeding from the nose or gums.

Unguentum Gallæ and Unguentum Gallæ c. Opio are used in hæmorrhoids.

℞. Inf. Gallæ, f ℥iv.

Cretæ prep. ʒss.

As an Astringent Gargle, Lotion, or Injection.—TADDEI.
See ACIDUM GALLICUM.
See ACIDUM TANNICUM.

*GELATINA. GLUTEN ANIMALE.

Animal jelly, either in the form of the finest commercial glue, or of size, or of purified gelatine, is used in emollient baths; or to diminish the acrimony of saline and sulphurous baths.

Purified gelatine, isinglass, and calves'-foot jelly are much used as articles of diet for the sick.

The quantity of glue or purified gelatine for a bath is from 12 to 24 ounces; it should be dissolved by heat in a quart of water, and the solution added to the bath. Gelatine dissolved in glycerine is used for putting up microscopic preparations.

 MIALHE.

GELSEMINUM SEMPERVIRENS. *Yellow Jasmin*

The root of *Gelsemium Sempervirens* (Nat. Ord. *aniaceæ*) of America. Gelsemina or Gelsemine, a powerful poisonous alkaloid, is the active principle. Gelsemin, the eclectic remedy, is a mixture of resins with the alkaloid gelsemine. It is tonic, febrifuge, antiperiodic, anodyne, sedative, and a vermifuge. It is useful in intermittent, remittent, typhoid, and other fevers; rheumatism, and nervous affections, troublesome cough, and is a valuable remedy in neuralgia. The hydrochlorate of gelsemine may be used in hypodermic injection, one grain in a drachm of water; dose, 1 to 3 minims. This solution also be used to dilate the pupil, but its action is not so rapid as that of atropia. The Tincture is the most frequently employed.

Solubility.—The alkaloid is very insoluble in water. Its salt, sulphate or hydrochlorate, is readily soluble.

Preparation.—An aromatic water for the Tincture.

Doses.—Stomach pump, emetic, atropia $\frac{1}{10}$ of a grain injected subcutaneously; artificial respiration, the chin being drawn forward. Double-dose is said to be the first effect of an over dose.

Use of Tinctura Gelseminum Sempervirens, 5 to 15 minims, cautiously increased.

Gelsemin (the resinoid body), $\frac{1}{2}$ to 2 grains.

Gelsemina (the alkaloid), $\frac{1}{10}$ to $\frac{1}{20}$ grain.

℞ Tinct. Gelsemini, ℥xv (root 1 oz., Sp. Rectif. 10 oz.)
 Aquæ Anethi, ʒj. Misce.

To be taken every six hours.

In Facial Neuralgia.—Dr J. SAWYER.

GENTIANA. *Gentian*

The dried root of *Gentiana Lutea* (Nat. Ord. *Gentianaceæ*) of Central and Southern Europe. It is a bitter tonic, febrifuge, anthelmintic, antiseptic. It is useful as a stomachic and general tonic in dyspepsia, "unconnected with inordinate irritability of the stomach;" in exhaustion from chronic affections, in gout, intestinal worms. *Externally*, the powder is sprinkled on sloughing ulcers. The Infusion and the Mixture are excellent vehicles for mineral acids, alkaline carbonates, bismuth preparations, and neutral salts. Strong caustic alkalies destroy their activity.

Vehicle.—The Mixture. The freshly-prepared Infusion combined with the Tincture.

Incompatibles.—Sulphate of iron, lead salts, &c.

Dose of Pulvis Gentianæ, 10 to 30 grains.

Extractum —, 2 to 10 grains.

Mistura —, $\frac{1}{2}$ to 1 ounce.

Infusum — comp. 1 to 2 ounces.

Tinctura — comp. $\frac{1}{2}$ to 2 drachms.

*Vinum —, $\frac{1}{2}$ to 1 drachm.

- 1 ℞ Inf. Gentianæ co. f 3ij.
Tinct. Gentianæ co. f 3ij.
Syr. Aurantii, f 3j.

Fiat haustus bis quotidie sumendus.

 Ol. Carui, ℥vj.

Misce, et fiant pil. xij. Sumat unam semel quotidie, horâ ante prandium.

J. B. M.

GEUM. *Avens*

Avens, or Herb Bennet, *Geum Urbanum* (Nat. Ord. *Rosaceæ*), is astringent, tonic, and antiseptic. It has been used as a substitute for cinchona in agues, a drachm of the powder being given every two hours in the intermissions.

GLYCERINUM. *Glycerine*

A sweet principle obtained from fats and fixed oils. It is a clear fluid, odourless, of a sweet taste. It is nutrient and demulcent. *Externally*, it is employed as an antiseptic, excipient, solvent, as a substitute for syrup, and as a basis for suppositories when mixed with gelatine. It prevents flatus and acidity, is said to be a remedy for trichinosis, and valuable in hæmorrhoidal disorders. It has the property of maintaining its moist state when exposed to the air, and hence is used in lotions in various skin affections, and as a dressing where the surface is to be kept moist. It has been tried as a substitute for cod-liver oil. When applied to the skin undiluted, its hygroscopic properties causes it to act as a strong irritant. The preparations of glycerine will be found under the names of starch, borax, and carbolic, gallic, and tannic acids.

Solubility.—In all proportions with water and alcohol. Insoluble in chloroform, ether, and oils.

Vehicle.—Water with a little mineral or vegetable acid.

**Dose*.—30 to 60 minims.

- 1 ℞ Glycerini, ℥ss.
 Aque destil. Oss. Fiat lotio.

In Cutaneous Diseases to keep the skin moist.

Ung. Cera alba, ʒvij. Fiat unguentum.

To allay Itching.—Dr NELIGAN.

℞ Sapon. Mollis, ʒj.

Aquæ Laurocerasi,

Glycerini aa ʒj. M. ft. cerat.

For Chilblains.—*

GLYCYRRHIZA RADIX. *Liquorice Root*

The fresh and dried root or underground stem of *Glycyrrhiza Glabra* (Nat. Ord. *Leguminosæ*) of England. It is succulent, pectoral, aperient. It is useful in catarrhal affections and in irritations of the mucous membrane of the alimentary and urinary passages; in the constipation of senia or pregnancy. The foreign extract (Spanish or Lian juice) is a popular remedy for coughs. The P. B. extract is a purer preparation. Its chief use is as an excipient for pills, or as an adjunct to nauseous, especially sic medicines.

[Decoction of liquorice (1 oz. of fresh root, or $\frac{1}{2}$ oz. of the dried, to a pint of water, boiled for a few minutes only, and strained whilst hot) is an excellent vehicle for nauseous salines, as sulphate of magnesia, chloride of sodium, &c. The Fluid Extract of the P. B. diluted with water may be used for the same purpose.]

Use of Extractum Glycyrrhizæ, $\frac{1}{2}$ to 1 drachm.

Extractum ————— Liquidum, 1 drachm.

Pulvis ————— comp. 30 to 60 grains (contains senna, and is given as a laxative).

*Pulvis Liquiritiæ comp. (Ger. and Russ. Ph. contains senna, sulphur, and fennel), 1 drachm or more.

℞ Ext. Glycyrrhizæ, ʒj.

Potass. Carb. ʒiij.

Crocī, ʒss.

Aquæ ferventis, Oij.

Macera per noctem, et cola. A little to be taken frequently.

In Catarrh.—Dr T. FULLER.

℞ Ext. Glycyrrhizæ,

Pulv. Acaciæ, ana ʒij.

Aquæ ferventis, f ʒiv. Liqna, et adde

Vini Antim. f ʒij.

Tinct. Opii, mxx. Fiat mistura.

A tablespoonful to be taken occasionally.

In Catarrhal Affections.—Dr WOOD (U.S.).

- 3 \mathcal{R} . Ext. Glycyrrhizæ, ʒij.
 Liq. Ammon. Anisati, ʒij.
 Aquæ Fœniculi, ʒvj. Misce.
 To be taken in teaspoonfuls.

In Acute Bronchial Catarrh.—NIEMEYER.

- 4 \mathcal{R} . Pulv. Glycyrrhizæ co. (Ger. Ph.) ʒj.
 A teaspoonful in water to be taken occasionally at bedtime.
 As a Laxative.—Dr W. O. PRIESTLY.

*GOA POWDER. See ARABOBA

GOSSYPIUM. *Cotton-Wool*

The hairs of the seeds of various species of *Gossypium* (Nat. Ord. *Malvaceæ*). It is used to protect burns and scalds from the external airs, as a filter in respirators, as a dressing in surgical operations, and in various diseases, as erysipelas, and in the preparation of Pyroxylin.

*GOSSYPII RADIX

The dried bark of the root of the Cotton Plant. It is parturient, emmenagogue. It is useful in amenorrhœa, dysmenorrhœa, and in atony of the gravid uterus.

Dose of Tinctura Gossypii Radicis (dried bark 1, proof spirit 4, digest for seven days), 1 drachm.

GRANATI RADICIS CORTEX

Pomegranate Root Bark

The dried bark of the root of *Punica Granatum* (Nat. Ord. *Myrtaceæ*) from Southern Europe. It is astringent, anthelmintic. It is chiefly used to expel tapeworm. A decoction of the rind of the fruit has been given in intermittent fevers as a febrifuge. *Externally*, it is employed as an astringent gargle, and as an injection in leucorrhœa. As an anthelmintic, a wineglassful of the decoction should be administered every two hours until a pint has been taken. A slop diet should precede its use, and if it should

not operate, its action should be assisted by a dose of castor oil.

Vehicle.—The Decoction to which may be added an aromatic, as spirit of nutmeg or compound tincture of cinnamon with syrup or syrup of ginger.
Incompatibles.—Metallic salts, alkalies, &c.

Dose of Pulvis cort. fr. Granati, 30 to 30 grains.
Decoctum Granati Radicis, 1 to 2 ounces.

- 1 ℞. Granati fr. cort. ʒss.
 Lactis Vaccinæ rec. lb. iv.
Misce: decoque ad lb. ij. Sumat cochl. iij ampla tertiliis horis.

In Chronic Diarrhœa.—Dr HOOPEE.

- 2 ℞. Ext. Alcoh. rad. Granati, ʒvj.
 Aquæ Menthæ,
 Aquæ flor. Tiliæ,
 Succi Limon. ana ʒij.
A fourth part every four hours.

To expel Tapeworms.—DESLANDES.

- 3 ℞. Ext. Granati corticis Alcoholici, ʒvj.
 Syr. Limon.
 Aquæ Menth. Vir.
 Aquæ flor. Tiliæ, aa ʒij. M.
Dosis sit cochl. j magnum.

For Tapeworms.—Trousseau and REVEIL.

- 4 ℞. Pulv. cort. rad. Granati, ʒss.
Divide in pulveres vj. Sumat unum omni semihorâ ad tertiam vicem.

In Tapeworm.

- 5 ℞. Decocti cort. rad. Granati, lb. j.
 Syr. Zingiberis, ʒj.
Sumat tertiam partem omni semihora ad tertiam vicem incipiens mane.
[The bowels should be previously cleared by castor oil.]

In Tapeworm.—Dr JOY.

- 6 ℞. Decocti fruct. Granati, f ʒvij.
 Mellis Boracis, f ʒj.
Sit gargarisma, sæpe utendum.

In Aphthous Ulceration of the Mouth and Fauces.

Dr NELIGAN.

- 7 ℞. Granati fr. cort. ʒijj.
 Aquæ, Oij. Coque ad Oias, cola, et adde
 Aluminis, ʒiiss. Fiat injectio.
To be injected two or three times a day.

In Leucorrhœa.—Dr R. REECH.

GRANULATED PREPARATIONS

Bromide of Ammonium	} 2 gr.	Citrate of Iron, 3 gr.
" Potassium		" " and Quinine, 1
" Sodium		" Quinine, 1 gr.
Carbonate of Bismuth		Iodide of Iron, 1 gr.
" Iron		Nitrate of Cerium, 1 gr.
" Lithia		" Potash, 5 gr.
Citrate of Cinchonine		Phosphate of Iron, 1 gr.
Hypophosphate of Lime		
Iodide of Potassium		
" Sodium		

The above quantity of each drug is contained in 60 gra of the preparation. The ordinary dose is a teaspoonful.

Mineral Waters

Carlsbad.	Marienbad.	Vichy, also
Cheltenham.	Pullna.	Gingerade.
Kissingen.	Selters.	Lemonade.

Dose, a large teaspoonful.

*GRINDELIA ROBUSTA

The leaves and flowering tops of *Grindelia Robusta Squarrosa* (Nat. Ord. *Compositæ*). It is emollient, stimulant. It is useful in asthma, bronchitis, pneumonia, fever, uterine and vesical catarrh, and in inflammatory other disorders of the genito-urinary system. *Externæ*, it forms a good dressing for burns and blisters, and beneficial application in iritis.

Vehicle.—The Liquid Extract in water, with syrup of orange.

Dose of Ext. *Grindeliæ Robustæ*, 3 grains.

Ext. *Grindeliæ* ——— Liquidum, 10 to 20 minims.

1 ℞ Ext. *Grindeliæ Robustæ* Liq. mxxv.
 Syr. Aurant. ʒj.
 Aquæ, ad ʒj. M. Ft. haustus.

To be taken every three hours.

In Asthma.

GUAIACI LIGNUM. *Guaiacum Wood*

The wood in coarse powder or small chips of *Guaiacum Officinale* (Nat. Ord. *Zygophyllacæ*) from Jamaica. I contained in Decoctum Sarsæ Compositum.

GUAIACI RESINA. *Guaiacum Resin*

A resin occurring in large masses or brownish tears, obtained by incision or heat from the stem of *Guaiacum Officinale*. It is alterative, stimulant, diaphoretic, diuretic, and somewhat emmenagogue. It is useful in syphilis, throat affections, and many cutaneous diseases. It is principally used as a remedy in gout and chronic rheumatism.

Solubility.—In alkaline solutions, alcohol, chloroform, &c.

Vehicle.—The Ammoniated Tincture in water suspended by powdered tragacanth. The Powdered Resin in aromatic water (cinnamon, clove, or aniseed) and suspended by tragacanth: syrup, or syrup of tolu, may be added. Tragacanth suspends guaiacum better than acacia.

Incompatibles.—Spirit of nitrous ether, mineral acids, &c.

Dose of Guaiacum, 10 to 30 grains.

Mistura Guaiaci, $\frac{1}{4}$ to 2 ounces.

Tinct. Guaiaci Ammoniatæ, $\frac{1}{4}$ to 1 drachm.

*Guaiacum of Lithia, 2 to 5 grains.

Digere per dies paucas, et cola. A teaspoonful to be taken three times a day in milk or wine.

In Dysmenorrhœa and Idiopathic Amenorrhœa.

Dr DEWEES (U.S.).

GUARANA. *Brazilian Cocoa

The seeds of *Paullinia Sorbilis* (Nat. Ord. *Sapindaceæ*) of Brazil. It contains a bitter crystalline principle, Guaranine, which appears to be identical with Theine. It is nutritive, stomachic, febrifuge, aphrodisiac. The dried seeds, pounded and made into cakes, when mixed with water and sweetened, are employed as a nutrient beverage in Brazil. It is useful as a preventive and curative of nervous headache, and in chronic rheumatism, neuralgia, diarrhœa, dysentery. It stimulates and soothes the gastric nervous system, at the same time increasing the action of the heart and arteries.

Vehicle.—The Fluid Extract; or the Powder in sweetened water, or in the beverages cocoa, tea, or coffee.

Dose of Pulvis Guarani, 10 to 30 grains.

Extractum —, 5 to 10 grains.

Extractum — Liquidum, 10 to 30 minims.

Tinctura —, 1 to 2 drachms.

- 1 ℞ Guarani, ʒvss.
 Sacchari albi, lb. iss.
 Aquæ, q. s. ut fiat pasta in trochiscos gr. x div.

GAYRELLE.

- 2 ℞ Guarani, gr. x—xv.
 Sacchari albi, q. s. Fiat pulvis.
 To be taken once or oftener in the day.

In Sick Headache.—Dr S. WILKS.

- 3 ℞ Ext. Guarani, gr. lxxv.
 Divide in pulv. x.

From 1 to 5 of them to be taken at the beginning of a periodical headache; and one, night and morning, for several days about the time of the expected return.

TROUSSEAU and REVEIL.

GUMMI RUBRUM. *Red Gum

An exudation from the bark of *Eucalyptus Rostrata* (Nat. Ord. *Myrtaceæ*) of Australia. Its principal constituents: kino-tannic acid. It is astringent, styptic. It is useful chiefly in dysentery and diarrhoea. *Externally*, in the form of injection, it is employed in epistaxis and minor hæmorrhages, and as a collyrium in conjunctivitis. In dysentery or diarrhoea, its action is aided when combined with a fresh preparation of Bael fruit.

Solubility.—Of 100 parts, 90 are dissolved by cold water.

Vehicle.—The Lozenge, or the Syrup diluted with water.

Dose of Decoctum, Extractum Liquidum, and Syrupus, 30 to 60 minims.

Tinctura, 20 to 40 minims.

Trochisci, 1 to 3 lozenges.

1 ℞ Ext. Belæ Liq. ʒj.
 Decoct. Gummi Rubri, ʒss.
 Aquæ, ad ʒj. M. Ft. haust.

To be taken every three hours.

In Dysentery.—*

GUTTA PERCHA. *Taban Tree*

The concrete juice of *Isonandra Gutta* (Nat. Ord. *Sapotaceæ*), from Singapore, &c. It is employed in the form of liquor gutta percha in the preparation of Charta Sinapis.

Solubility.—Nearly so in chloroform.

GYNOCARDIÆ OLEUM. *Chaulmugra Oil

An oil expressed from the seeds of *Gynocardia Odorata* (Nat. Ord. *Pangiaceæ*), from Hindustan. It is a solid, light brown in colour, of disagreeable odour and taste. It contains an active principle, Gynocardic acid. It is alterative, expectorant. It is useful in scrofula, skin diseases, leprosy, rheumatism, secondary syphilis, phthisis.

Vehicle.—Milk. In perles.

Dose of Gynocardiæ Oleum, 5 to 15 minims.

Acidum Gynocardicum, $\frac{1}{2}$ to 2 grains.

HAMAMELIS VIRGINICÆ. *Witch Hazel

The leaves and bark of *Hamamelis Virginica* (Nat. Ord. *Hamamelidaceæ*) of America. The seeds contain an oil. It

is astringent, tonic, sedative, emollient, anodyne. It is specially useful in diseased conditions of the alimentary and genito-urinary mucous membrane, as diarrhoea, dysentery, ulcerations of the stomach and intestines, gleet, leucorrhœa. It is also useful in passive hæmorrhages, as menorrhagia, and has been recommended in phlegmasia dolens. *Externally*, in lotions, it is applied to bruises, sprains, inflamed mucous surfaces, &c.

Vehicle.—The Tincture in aromatic water.

Dose of Decoctum Hamamelis (1 oz. to 1 pint) a wineglassful.

Tinctura ————— (of the bark), 5 to 30 minims.

Lotio ————— (tincture 1 pint, water 12).

Hazeline (a distilled product from the fresh bark), 15 minims, in aromatic water; as a lotion or injection, diluted with an equal volume of water.

Hamamelin (the eclectic preparation), 2 to 5 grains in pill.

1 ℞ Tinct. Hamamelis, ℥x.

Aquæ Cinnam. ad ʒj. M. Ft. haust.

To be repeated every three hours.

In Menorrhagia.—*

2 ℞ Hamamelin, gr. ij.

Glyc. Tragacanth, q. s. M. Fiat pilula.

To be taken three times a day.

In Gonorrhœa.—*

HÆMATOXYLI LIGNUM. *Logwood*

The heart-wood of Hæmatoxylon Campechianum (Nat. Ord. *Leguminosæ*). It is a mild astringent. It is useful in chronic diarrhoea and dysentery, atonic dyspepsia, passive hæmorrhages, cholera infantum. *Externally*, it is applied as an injection in leucorrhœa.

Vehicle.—The Decoction with spirit of chloroform, or chloroform or cinnamon water. The Extract in pill with confection of roses or manna and syrup.

Incompatibles.—Mineral acids, metallic salts, tartar emetic.

Dose of Decoctum Hæmatoxyli, 1 to 2 fluid ounces.

Extractum —————, 10 to 30 grains.

1 ℞ Ext. Hæmatoxyli, ʒss.

Mist. Crete,

Aquæ Cinnamomi, ana f ʒvj.

Misce, pro haustu bis terve in die sumendo.

In Diarrhœa.—MR BRANDE.

- 2 **R.** Ext. Hæmatoryli, ʒss.

- In Diarrhœa.*—CONSUMPTION HOSPITAL.

*HELLEBORUS NIGER. *Christmas Rose*

The root of *Helleborus Niger* (Nat. Ord. *Ranunculaceæ*), is a hydragogue cathartic and emmenagogue. In over-dose it acts as an irritant poison. It has been recommended in mania, hypochondriasis, dropsy, epilepsy, apoplexy, amenorrhœa, cutaneous diseases. It is now seldom prescribed.

**Dose of Pulvis Hellebori nigri, 5 to 10 grains,
Extractum Hellebori, U.S., 5 to 10 grains.
Tinctura Hellebori nigri, 1 drachm.**

- 1 ℞ Tinct. Hellebori nigri, f ʒiss.
 Inf. Sennæ co. f ʒj.
 Syr. Zingiberis, f ʒij.
- Misce : fiat haustus primo mane sumendus.
- In Mania or Cephalalgia, with Torpid Bowels.
- Dr NELIGAN.
- 2 ℞ Ext. Hellebori,
 Ext. Jalapæ, ana ʒss.
 Zingiberis pulv. gr. x.
- Misce bene, et divide in pilulas xv. Sumantur tres semel vel bis in hebdomadâ.
- In Melancholia.—Dr R. REECH.
- 3 ℞ Tinct. Hellebori nigri,
 Tinct. Castorei,
 Sp. Ætheris Nit. ana f ʒij.
- Misce :umat mxxx ter vel quater in die pro re natâ.
- In Melancholia.—Dr E. J. CLARK.

HEMIDESMI RADIX. *Hemidesmus Root*

The dried root of *Hemidesmus Indicus* or Indian *Sarsaparilla* (Nat. Ord. *Asclepiadaceæ*) from India. It has an aromatic odour and contains a peculiar volatilizable acid. It is alterative, diuretic. It is useful in cutaneous affections and some diseases of the kidney. It is chiefly employed as a flavouring agent. When the medicinal effects of *Hemidesmus* are required, a pint of the infusion should be taken in the twenty-four hours.

Dose of Syrupus *Hemidesmi*, 1 drachm.

*Infusum ———, (2 oz. to 1 pint), a wineglassful.

1 ℞. Liq. Potassæ, f 3ss to f 3j.

Aquæ fl. Aurantii, f 3j.

Syr. *Hemidesmi*, f 3v.

Sumat cochl. ij ampla ter die ex decoct. hordei.

In Gonorrhœa.—Mr H. BELLINAYE.

2 ℞. Decocti Hordei comp. f 3x.

Syr. *Hemidesmi*, f 3j.

Fiat mistura, cujus sumantur cochlearia ampla duo interdum.

In Inflammation of Mucous Membranes.—Dr NELIGAN.

3 ℞. Syr. *Hemidesmi*, f 3iv.

Tinct. Tolutanæ, f 3ss.

Tinct. Camphoræ co. f 3j.

Vini Ipecacuanhæ, f 3iij.

Aquæ, f 3iij.

Fiat mistura, cujus sumat cochleare amplum quâque secundâ hori.

In Chronic Bronchitis.—Dr NELIGAN.

HORDEUM DECORTICATUM. *Pearl Barley*

The decorticated seeds of *Hordeum Distichon* (Nat. Ord. *Graminaceæ*) are much used in the form of Decoctum *Hordei* as a mild demulcent and slightly nutritive drink, in catarrh, febrile complaints, &c.

*Decoctum *Hordei* comp. contains figs, liquorice, and raisins.

HYDRARGYRUM. *Mercury*

A brilliant, silver-white metal, liquid at ordinary temperatures, entirely volatilized by heat, chiefly obtained by distillation from its sulphuret, native cinnabar. It is found in China, Spain, America, &c. It is alterative, sialogogue, cholagogue,

gative, stimulant, absorbent. It is useful in syphilis, disordered states of the liver, constipation, congestion of the veins, acute and chronic inflammations, a depletive in *ura*. It promotes the secretion of bile or its flow into intestines. It increases the effect of diuretics and phoretics, and causes the absorption or checks the formation of morbid products. *Externally*, it is a stimulant to onic inflammations and indurations. It is also employed the form of inunction to introduce the metal into the *sem*. The vapour will produce ptyalism. The Ammonium plaster is a discutient to glandular swellings, onic synovitis, syphilitic nodes. The Compound Ointment is applied to indolent tumours, carbuncles. Mercury and its compounds are apt to produce salivation: their effects must accordingly be watched. Mercury, as a metal, seldom prescribed alone for internal use. In children, to evade or obtain the constitutional effects of mercury, diluted mercurial ointment should be spread on a flannel roller and round one of the legs or the abdomen.

Use of Pilula Hydrargyri (blue pill), as an alterative, 3 to 5 grains; as a cathartic, 8 to 15 grains, conjoined with purgatives or followed by them; as a sialogogue, 5 grains three times a day until the gums are affected, adding a little opium if necessary, to prevent the pills from acting on the bowels.

Emplastrum Hydrargyri.

Linimentum ———.

Suppositoria ———.

Unguentum ———.

Unguentum ——— comp. (Scott's absorbent ointment).

*HYDRARGYRI BROMIDUM ET BIBROMIDUM

Bromide and Bibromide of Mercury

The bromide occurs as a white insoluble powder : the bi-bromide, in colourless crystals, which are soluble. They are analogous in composition and medicinal properties to the corresponding iodides of mercury.

Vehicle.—In pill.

Dose of Hydrargyri Bromidi, 1 grain.

Bibromidi, $\frac{1}{4}$ th of a grain.

Pessaria Hydrargyri Bromidi (each containing $\frac{1}{4}$ grain).

Unguentum ——— Bibromidi (each containing $\frac{1}{4}$ th grain).

————— (4 grains to the ounce).

1 ℞ Hydrarg. Bromidi (Per-bromidi), gr. ss.

Decoct. Dulcamaræ, fʒviij. Misco.

Two tablespoonfuls to be given three times a day.

In Obstinate Secondary Syphilitic Eruptions.

Dr NELIGAN.

2 ℞ Hydrarg. Bibromidi, gr. vj.

Aquæ destil. Oj. Misco: fiat lotio.

For Syphilitic Chancres.—WERNERCK.

HYDRARGYRI IODIDUM RUBRUM

Red Iodide of Mercury

A crystalline powder of a bright vermilion colour. An irritant poison, more powerful than the green iodide. It acts like corrosive sublimate. *Externally*, the ointment is applied in bronchocele, warts, syphilitic nodes.

Solubility.—Insoluble in water, sparingly soluble in alcohol. Soluble in a strong solution of iodide of potassium, or chloride of sodium, or ether.

Vehicle.—A solution of iodide of potassium. Diluted with sugar of milk and made into a pill with glycerine of tragacanth or manna.

**Dose*.— $\frac{1}{4}$ to $\frac{1}{2}$ of a grain.

Unguentum Hydrargyri Iodidi Rubri.

HYDRARGYRI NITRATIS LIQUOR ACIDUS

Acid Solution of Nitrate of Mercury

A colourless, strongly acid solution of mercury, in nitric acid and distilled water. It is a powerful escharotic. In a dilute form it acts as a stimulant and alterative. It is applied to syphilitic warts, tubercles, ulcers, cancerous and other morbid growths, and as an injection in gonorrhœa, &c. It is also used in chronic cutaneous affections, and in diseases of the eye.

Unguentum Hydrargyri Nitratis (Unguentum Citrinum).

***HYDRARGYRI OLEAS.** *Oleate of Mercury*

Recently precipitated and well dried yellow oxide of mercury dissolved in oleic acid. It is useful as an application in ringworm and persistent inflammation of the joints. It is prepared in three strengths, containing respectively 5, 10, and 20 per cent. of the oxide.

- 1 ℞. Hydrarg. Oleati (10 per cent.), ʒj.

To be painted over affected part.

In Tinea Circinata.—Dr LEONARD CANE.

- 2 ℞. Hydrarg. Oleati (10 per cent.), ʒj.

Morphine, gr. j. Fiat linimentum.

In Persistent Inflammation of Joints.—Mr JOHN MARSHALL.

HYDRARGYRI OXIDUM FLAVUM*Yellow Oxide of Mercury*

A yellow powder prepared from perchloride of mercury, solution of soda, and distilled water. It is useful in diseases of the eye. A better remedy than the Red Oxide, which always exhibits crystalline particles, however finely powdered. Oleate of mercury is prepared from this oxide.

It is entirely volatilized by heat.

- 1 ℞. Pagenstecher's Yellow Ointment (Yellow Mercuric Oxide) (Apothecaries' Hall, Ireland).

The size of a pea to be inserted between eyelids, and after five minutes what remains to be carefully washed out with a soft sponge.

In Phlyctenular Ophthalmia.—Dr H. R. SWANEY.

HYDRARGYRI OXIDUM RUBRUM*Red Oxide of Mercury*

An orange-red powder. It is emetic, purgative, escharotic, a powerful irritant. It has been used to excite vomiting and purging, but is now rarely prescribed. *Externally*, it is employed in powder, as an application to excrescences, chancres, &c.; and in ointment, to indolent ulcers, and in affections of the eye. However finely powdered, under the microscope, the red oxide exhibits crystalline particles. The yellow oxide is better adapted in the form of ointment for ophthalmic purposes.

Solubility.—Insoluble in water. Readily in hydrochloric acid.

Vehicle.—In pill with opium.

Dose.— $\frac{1}{2}$ to 1 grain.

Unguentum Hydrargyri Oxidi Rubri.

1 ℞ Hydrarg. Oxidi Rubri, gr. j.

Opii, gr. $\frac{1}{2}$.

Olei Caryophylli, mj.

Misce bene terendo simul, ut fiat pulvis subtilissimus.

(To be blown into the eye three or four times a day.)

In Thickening of the Cornea.—DR NELIGAN.

HYDRARGYRI PERCHLORIDUM

Perchloride of Mercury. Corrosive Sublimate

Occurs in colourless masses of prismatic crystals. It is a powerful irritant, a few grains being sufficient to cause death. It is alterative, and a powerful hepatic stimulant. It is useful in lepra and other cutaneous diseases, chronic rheumatism, visceral affections, syphilis, hepatitis. *Externally*, it is employed as an ointment, to old ulcers, chronic skin affections; as an injection, in obstinate mucous discharges; and as a gargle, in sorethroat.

Solubility.—1 in 16 of water, 1 in 3 of boiling water, 1 in 4 of rectified spirit and ether, 1 in 14 of glycerine.

Vehicle.—Diluted with sugar of milk and made into a pill mass with glycerine of tragacanth and manna. Compound decoction of sarsaparilla.

Incompatibles.—Decoction of bark, iodide of potassium, alkalis and their carbonates.

Antidotes.—Emetics, white of egg, milk and wheaten flour.

Dose of Hydrargyri Perchloridum, $\frac{1}{4}$ to $\frac{1}{2}$ of a grain.
 Liquor Hydrargyri Perchloridi, 80 to 120 minims.

- For Ill-conditioned Ulcers, Eczema, &c.*—Dr KELLY (U.S.).

HYDRARGYRI SUBCHLORIDUM

Subchloride of Mercury. Calomel

A dull-white powder, tasteless. It is alterative, purgative, antiphlogistic. It is useful in syphilis, scrofula, skin affections, hepatic derangements, cerebral diseases, pleurisy, peritonitis, iritis, other inflammations of serous membranes, yellow fever, cholera. *Locally*, it is applied in many skin diseases; as in injection in gleet; as a gargle in syphilitic sorethroat. Iodide of potassium, given in connection with the insoluble compounds of mercury, aids their solution and renders them much more active. The cathartic action of calomel is augmented by combination with vegetable purgatives, or by the subsequent administration of salts and senna.

Solubility.—Insoluble in water, rectified spirit, or ether.

Vehicle.—Manna as an excipient for pill.

Incompatibles.—Solutions of potash and soda, nitro-hydrochloric acid.

Dose of Hydrargyri Subchloridum, as an alterative, $\frac{1}{4}$ to 1 grain; as a purgative, 2 to 8 grains; as an antiphlogistic, 2 grains, with opium every four hours.

Pilula Hydrargyri Subchloridi co., 5 to 10 grains.

Lotio ————— Nigra.

Unguentum — Subchloridum.

- 1 ℞ Hydrarg. Subchlor. gr. x.
 Scammon. pulv.

 In Gutta Serena and Oæana.—Dr ELLIS.

HYDRARGYRI AMMONIATUM

Ammoniated Mercury. White Precipitate of Mercury

An opaque white powder. It is stimulant and alterative. *Locally*, it is employed, in an ointment, in various skin diseases, and for pediculi.

Solubility.—In hydrochloric acid. Insoluble in water, alcohol, ether
Vehicles.—As a lotion, the powder in rose-water.

Unguentum Hydrargyri Ammoniatum.

- 1 ℞ Ung. Hydrarg. Amm.
 Adipis præp. ʒʒ. Fiat unguentum.
 In Tinea Tonsurans.—*

HYDRARGYRUM CUM CRETA. *Grey Powder*

A mixture of mercury and prepared chalk. It is alterative and an hepatic stimulant. Though a mild preparation, a protracted use is apt to produce salivation. It is much used in diseases attended with deficient biliary secretion, especially in children. The efficacy of grey powder is increased when given in combination with compound rhubarb powder.

Vehicle.—For children in a little white or brown sugar. In rhubarb or compound aromatic powder.

Incompatibles.—Acids and acidulous salts.

Dose.—3 to 8 grains.

- 1 ℞ Hydrarg. cum Cretâ, ʒj.
 Pulv. Ipecac. co. ʒij.
 Magnes. Carb. ʒss. Tere bene simul.
 Four to six grains to be taken as a sedative for children.

In a form of Miasmatic Fever of Children.

Dr UPSHUR (U.S.).

- 8 ℞ Hydrarg. cum Cretâ, 3ss.
 Cerati Cetacei, 3ij. Fiat unguentum.

In Excoriations of the Anus.—Dr QUAIN.

*HYDRARGYRI CYANIDI. *Cyanide of Mercury*

A preparation from ferro-cyanide of potassium, sulphuric acid, and red oxide of mercury. It occurs in opaque white or transparent crystals. A powerful antisyphilitic.

Solubility.—1 in 11 of water, 1 in 4 of glycerine, 1 in 20 of rectified spirit.

Dose.— $\frac{1}{3}$ to $\frac{1}{2}$ of a grain.

- 1 ℞ Hydrarg. Cyanidi, gr. vj.
 Opil pulv. 3ss.
 Micc panis, 3j.
 Mellis, q. s. Fiant pilulæ 96.

One to be taken morning and evening.

M. PARET.

- 2 ℞ Hydrarg. Cyanidi, gr. viij.
 Aque destil. ℥viij.
 Dose, one or two drachms a day in milk and water, or gruel.
In the same cases as Liq. Hydr. Perchloridi.—M. PARENT.
- 3 ℞ Hydrarg. Cyanidi, gr. xij (gr. xvij, BERTT).
 Axungie, ℥j. Misce: fiat unguentum.
 To Syphilitic Sores.—BREERA.

 Mellis Rosæ, ℥j.
 Decoc. Hordei, Oj. Misce: fiat gargarisma.
 BREERA.
- 5 ℞ Hydrarg. Cyanidi, ℥ss.
 Inf. Lini, vel
 Inf. Althææ, Oj. Misce: fiat gargarisma.
 In Syphilitic Sorethroat.—M. PARENT.

*HYDRARGYRI ACETAS. *Acetate of Mercury*

Occurs in white crystals. This was once much celebrated in the cure of venereal disease.

Dose.—1 to 5 grains.

- 1 ℞ Hydrarg. Acet. 3ss.
 Camphoræ, 3ss.
 Opil pulv. gr. xxx (℥ss, Dr JOY).
 Syr. Papaveris, q. s.
 Misce, et div. in pil. xxx. Sumat unam omni nocte maneq.
 In Syphilis.—MR CARMICHAEL.
- 2 ℞ Hydr. Acet.
 Mannæ,
 Acaciæ pulv. ana ℥j.
 Aque Rosæ, q. s.
 Fiant pil. xx. Sumat iij hora somni.
 In Syphilis.—KEYSER.
- 3 ℞ Hydrarg. Acetatis, ℥j.
 Ol. Olivæ, ℥j.
 Axungie, ℥vj. Misce bene, ut fiat linimentum.
 In Herpes.—VAN MONS.

*HYDRARGYRI PHOSPHAS. *Phosphate of Mercury*

Its physical characters much resembles those of calomel—a white powder, blackened by alkalies. It has been recommended in cases of inveterate venereal ulcers.

Dose.— $\frac{1}{4}$ to $\frac{1}{2}$ of a grain.

- 1 ℞ Hydrarg. Phosph. gr. j.
 Opil pulv. gr. j.
 Antim. Tart. gr. ʒ.
 Fiat pilula, omni nocte sumenda

Dr HUNT.

HYDRARGYRI SULPHURETUM. *Cinnabar*

A preparation of Mercury and Sublimed Sulphur. It is an antisyphilitic, but is chiefly used in fumigation of venereal ulcers of the nose, mouth and throat.

- 1 ℞ Hydrarg. Sulphureti, ʒss.
 Pulv. Olibani, ʒij. Misse.

To be thrown on a red-hot iron, and the diseased parts (only) exposed to the fumes.

In Herpes and Venereal Pustules.—FOY.

*HYDRASTIS CANADENSIS

The rhizome of *Hydrastis Canadensis* (Nat. Ord. *Ranunculaceæ*) of North America. It contains the alkaloids, Berberine and Hydrastine, and yields the eclectic remedy—a resinoid—Hydrastin, which, it is said, also contains the above alkaloids as hydrochlorates. It is sialogogue, stimulant, tonic. It promotes the flow of saliva and probably of the gastric juice, increases the appetite and digestive power, and stimulates the liver. In America it is largely used as a substitute for quinine. It has been found a useful remedy in gonorrhœa.

Vehicle.—The Tincture in an aromatic infusion. Hydrastin, in pill with soap.

Dose of Ext. Hydrastis Liquidum, 10 to 30 minims.

Tinct. Hydrastis, 30 to 60 minims.

Hydrastin, 3 to 6 grains.

HYOSCYAMI FOLIA. *Hyoscyamus Leaves*

The fresh leaves and small branches of Henbane, *Hyoscyamus Niger* (Nat. Ord. *Atropaceæ*). The seeds are much richer in proportion, of the alkaloid, Hyoscyamine. It is narcot anodyne. In large doses, it causes delirium, coma, death. It is useful in subduing nervous excitement, in insomnia, irritations of the lungs, bowels, bladder and other organs; sedative when opium is contra-indicated for its stimulant constipating effects; as an adjuvant, to correct the gri-

of purgative medicines. *Externally*, the fresh leaves, as a poultice, allay pain. The juice of the plant dilates the eye.

Vehicle.—The Tincture in chloroform water, decoction of liquorice, or camphor water with syrup of tolu.

Incompatibles.—Vegetable acids, liquor potassæ or sodæ.

Antidote.—Emetics, stimulants, lemon juice.

Dose of Tinctura Hyoscyami, 15 to 40 minims.

Extractum ———, 3 to 6 gr.

Succus ———, 15 to 40 minims.

1 ℞ Ext. Hyoscyami, gr. iij.

SPIELMANN.

*ICHTHYOCOLLA. *Isinglass*

Isinglass consists of the swimming bladder or sound of various species of Sturgeon (*Acipenser*) prepared and cut into fine shreds. It is nutritive, demulcent. It is employed in court plaster and gold-beater's skin. It is not soluble in cold water.

1 ℞ Ichthyocollę, ʒij.
Aquę, lb. ij.
Decoq̃ue ad libram unam, cola, et adde
Lactis vaccini, lb. ij.
Sacchari, ʒj. Misce.

A wineglassful, frequently, as a demulcent and nutritive for delicate persons.

Dr HOOPER.

*IGNATIA AMARA

The seeds of Ignatia Amara, known as St Ignatius' Beans (Nat. Ord. *Loganiacę*), from the Philippine Islands. They are exceedingly bitter, and contain a larger quantity of the alkaloid Strychnia than Nux Vomica seeds. They act as a bitter stomachic and nervine tonic.

Dose of the Extractum $\frac{1}{2}$ to 1 grain.

*INDIGUM. *Indigo*

A blue dye obtained from several species of Indigofera (Nat. Ord. *Leguminosę*) by allowing the plants to ferment in vats of water. It is an antispasmodic, and has been particularly recommended in the treatment of epilepsy and amenorrhęa. It is useful as a test for sugar in the urine.

Dose of the Powder 20 to 60 grains, gradually increased.

1 ℞ Indigo pulv. ʒss.
Pulv. Cinram. co. gr. v.
Misce: fiat pulvis. Sumat talem quarter in die.

HÔPITAL DE LA CHARITÉ.

 Pulv. Ipecac. ana gr. x.
 Pulv. Opii, gr. v.
 Misce, ut fiat massa in pilulas granorum due dividenda. Sumat j horâ omni.

In Chronic Catarrh.—HEIM.

IODUM. *Iodine*

A non-metallic element obtained principally from the ashes of sea-weeds. It occurs in laminar crystals of a dark colour and metallic lustre. It forms the active ingredient in burnt sponge, a remedy used before Iodine was known. Free Iodine produces a deep-blue colour with starch. The blue colour or precipitate is produced by the action of Iodine on Amylose in the contents of the starch granules.

It is, accordingly, necessary to rupture the cell-wall by moist heat, and then allow the starch liquid to cool. Iodine and its compounds are thus easily recognised. It is a stimulant to the lymphatic system, an absorbent, alterative, antidote, caustic, rubefacient. In large doses, it is an irritant poison. It is useful in all glandular enlargements, simple hypertrophy of organs, dropsy, chronic mucous discharges, scrofulous disorders, secondary syphilis. *Externally*, it is employed to disperse scrofulous swellings; as an application in cutaneous diseases; to diseased joints; to cleanse the uterus; to bursæ. The vapour is inhaled in syphilitic and other sorethroats. It is said to cause atrophy of the mamma and testis.

Solubility.—1 in 7000 of water, 1 in 60 of glycerine. Readily soluble in alcohol, ether, or chloroform. Iodide of potassium and chloride of sodium assist its aqueous solution.

Vehicle.—The Tincture in cinnamon or aniseed water with syrup of orange. Coffee.

Incompatibles.—Ammonia, vegetable alkaloids, metallic salts.

Antidote.—Emetics, demulcent drinks, starch, flour. Morphia subcutaneously to relieve pain.

Dose of Iodum, $\frac{1}{4}$ to $\frac{1}{2}$ grain.

Tinctura Iodi, 5 to 30 minims.

*Acidum Iodicum, 3 to 10 grains.

*Syrupus Iodo-Tannin (iodine 1 gr. to the ounce), 3 to 4 drachms.

External Applications

Linimentum Iodi.

Liquor. —.

Unguentum —.

Vapor —.

A paint formed by combining equal parts of the Liniment and Tincture.

*Glycerine and Iodine (a solution of iodine and iodide of potassium in glycerine 3 parts, water 1 part).

Iodized cotton.

Iodine for injection: the Lotion or Tincture diluted with water.

A Colourless Tincture of Iodine (tincture of iodine 1 drachm, carbolic acid 6 minims, water to 6 oz.).

A Colourless Tincture of Iodine is also made by adding strong solution of ammonia to the tincture and allowing it to stand twenty-four hours. It is in reality a solution of iodides of potassium and ammonium, with a small proportion of iodate of ammonium.

 Aquæ. ʒvj. Fiat injectio.

In Ozæna.—NIEMEYER.

*IODOFORMUM. *Iodoform*

A yellow, crystalline substance, in minute scales and in powder. It was first recommended by Bouchardat as an external anæsthetic. It is stimulant, tonic, alterative, anodyne, antiseptic. It is useful in sciatica, neuralgia, syphilis, scrofulous enlargements, and glandular hypertrophies. *Externally*, it is employed to relieve the pain of cancer and neuralgic affections; as an application to chancres and venereal sores; as an antiseptic in the form of spray and dressings.

Solubility.—1 in 10 of ether, 1 in 14 of chloroform, 1 in 80 of rectified spirit. In glycerine and in the fixed and volatile oils. Insoluble, practically, in water.

Vehicle.—Iodoform pastilles (1 grain in each). In pill, with an equal weight of pure soap and a little glycerine as an excipient; oil of carraway

or cloves may be added. Iodoform Bougies, nasal or urethral. Iodoform Ointment, made with vaseline impregnated with peruvian balsam or musk. Cotton impregnated with Iodoform. In solution in flexible collodion as a paint.

The oil of winter green (*Oleum Chimaphilæ*) is one of the best deodorants of Iodoform.

Dose.—1 to 5 grains.

 Ol. Olivæ, ʒvj. M.

Dissolve the iodoform in the oil of eucalyptus by the aid of gentle heat, and add the olive oil.

Mr BERKELEY HILL.

In the above two prescriptions the rank odour of Iodoform is effectually disguised.

- 5 ℞ Iodoformi, 1 part.
 Collodion Flexil 20 parts. M.

MOLESCHATT.

IPECACUANHA. *Ipecacuan*

The dried root of *Cephaelis Ipecacuanha* (Nat. Ord. *Rubiaceæ*) from Brazil. It contains an alkaloid, Emetine. In large doses, it is emetic; in small doses, it is diaphoretic, expectorant, laxative, a vascular sedative, and a powerful hepatic stimulant. In full doses, it proves an easy and safe emetic. It does not nauseate so much as Tartar Emetic, nor is it so rapid and irritating in its action as sulphate of zinc, or mustard. For children and delicate persons, it is by far the best emetic. It is given to produce vomiting in whooping-cough and asthma. It has a specific action on the bronchial mucous membrane, exciting the secretion of

mucus when deficient, or altering and checking an inordinate flow. It relaxes the system and causes sweating. As an expectorant, it is given in catarrhs, frequently combined with squill. As a diaphoretic, it is employed in febrile affections, often in conjunction with opium. It prevents or arrests the paroxysm of ague. It is a most valuable remedy in tropical dysentery and diarrhœa. Combined with quinine and belladonna, it checks the night perspiration of phthisis.

Emetine, the active principle of *Ipecacuanha*, occurs as a whitish amorphous powder. It is a powerful poison. The dose, as an emetic, is a quarter of a grain. There are, however two Emetines—one pure, the other impure. The former is several times stronger than the latter. Emetine, as a substitute for *Ipecacuanha*, possesses no advantages. On the contrary, its action in the stomach is apt to be more violent and continued. Under these considerations it should not be prescribed.

Vehicle.—The Powder in warm water or chamomile tea as an emetic. The Wine diluted. A Vinegar of *Ipecacuanha* would be much more preferable. The Wine is an uncertain preparation, its emetine being carried down with the acid tartrate of potassium, so that very little is left in solution. Unless very recently made, it should be shaken up so as to include the sediment to which its activity will principally be due.

Incompatibles.—Astringent infusions, vegetable acids, the nitrates, salts of mercury.

Dose of *Pulvis Ipecacuanhæ*, as an expectorant, $\frac{1}{4}$ to 2 grains; as a diaphoretic, 2 to 4 grains; as an emetic, 15 to 30 grains.

Trochisci ———, 1 to 3 lozenges.

Trochisci ——— et *Morphiæ*, 1 to 6 lozenges.

Vinum ———, as an expectorant, 5 to 40 minims; as an emetic, 3 to 6 drachms.

**Syrupus* ———, 1 to 2 drachms.

The prescriptions are arranged as follows :

1. *Ipecacuanha* as an Emetic for Adults.

1 *R.* *Pulv. Ipecac.* \mathfrak{zj} .

Pulv. Antim. Tart. gr. j. Misce.

To be taken entire as an emetic, or in divided doses as sudorific and expectorant.

2 *R.* *Pulv. Ipecac.* \mathfrak{zj} .

Vini Antim. f 3ij.

Aquæ Menth. vir. (vel Pulegii) f 3ix.

Misce: fiat haust. emetic.

In Chronic Diarrhœa.—TROUSSEAU and REVEL.

PULVIS IPECACUANHÆ COMPOSITUS

Compound Ipecacuan Powder

A fawn-coloured powder of Ipecacuanha, 1; Opium, 1; Sulphate of Potash, 8 parts. It is also called *Pulvis Doveri*, or *Dover's Powder*. It is placed by itself, as being midway between ipecacuanha and opium, and as possessing the virtues of both drugs. Either of these separately acts on the skin, but combined, they form one of the most valuable of the sudorifics. It is employed generally in febrile cases in which opiates are not contra-indicated, in catarrhal and rheumatic affections, cardialgia, diarrhoea, dysentery. It furnishes a useful preparation for administering opium in small quantities to children.

Vehicle.—In pill with manna and syrup or glycerine of tragacanth; 10 grains may be included in two moderate sized pills. In draught with mucilage, camphor water, and syrup of ginger. In hot gruel.

Dose of Pulvis Ipecacuanhæ co., 5 to 10 grains.

Pilula Ipecacuanhæ cum Scilla, 5 to 10 grains.

Pilula Ipecacuanhæ cum Opio, 5 to 15 grains. (Ipecacuan and Opium, 8 parts; Confection of Roses, 1 part.)

- 1 ℞ Pulv. Ipecac.
 Pulv. Opii, ana gr. j.
 Pulv. Sodæ Carb. gr. xij.

Misce, bene terendo. Fiat pulvis. Sumat talem octavis omn. horis.
 (This may be considered as a modification of Dover's Powder.)

In Spasmodic Asthma, Hooping-cough, &c.

Dr A. T. THOMSON.

- 2 ℞ Pulv. Doveri, ʒj.
 Mist. Amygd. ʒviij.
 Mucil. Acaciæ, ʒj.

Misce. Sumat ʒj tribus horis vel quum tussis urget.

In Catarrhal Cough.—Dr LATHAM.

- 3 ℞ Pulv. Ipecac. co. gr. iv—vj.
 Sodæ Tart. ʒj.
 Decocti Althææ, ʒiss.
 Syr. Limonis, ʒss.

Misce: fiat haustus, quartâ vel sextâ quâque horâ sumendus.

In Consumption.—Sir A CRIGHTON.

- 4 ℞ Pulv. Doveri, gr. x.
 Pulv. Antimon. gr. iij. Misce.

To be taken at bedtime.

In Granular Kidney with Shivering and Headache.

Dr GRAINGER STEWART.

- 5 ℞ Pulv. Ipecac. co. gr. ½.
Calomelanos, gr. ¼.
Potass. Chlorat. gr. iij. Fiat pulvis.
To be taken every hour, according to symptoms.
In Croup.—Dr R. C. R. JORDAN.
- 6 ℞ Pulv. Ipecac. co. gr. j.
Sacchari, ℥j.

Pulv. Hydrarg. Subchlor. gr. viij.
Pulv. Jacobi veri, ʒj.
Pulv. Cinnam.
Pulv. Zingib. ana ʒij.
Pulv. Cancellæ albæ, ʒj.
Misce, et divide in pulv. viij. (One to be mixed in a wineglass with a
dessert-spoonful of brandy, and twice or thrice as much of peppermint,
cinnamon, or common water, and so drunk. This is to be given every ten
or twenty minutes, according to the urgency of the case, or until the skin
is bedewed with a copious sweat.)
In Cholera.—Dr RICHMOND.

IRIDIN OR IRISIN. *Blue Flag

The oleo-resin from the rhizome of *Iris Versicolor* (Nat. Ord. *Iridaceæ*). It is purgative, emetic, diuretic. It is a powerful hepatic and intestinal stimulant.

Vehicle.—The oleo-resinous extract is usually mixed with an equal weight of some absorbent powder to render its conditions pulverulent. In pill with glycerine of tragacanth.

Dose of Iridin, 2 to 5 grains.

***JABORANDI**

The leaves of *Pilocarpus Selloanus*, or *Pilocarpus Pinatifolius* (Nat. Ord. *Rutaceæ*). This drug contains an active principle, Pilocarpine, a very deliquescent extractive mass of a yellow colour. The Nitrate of Pilocarpine is a permanent salt. It is diaphoretic sialogogue, galactagogue. It markedly causes profuse perspiration, increases the quantity of the saliva, and promotes the secretion of milk. Pilocarpine may be injected hypodermically as Nitrate or Hydrochlorate. It contracts the pupil of the eye. It is antagonistic in action to Belladonna.

Vehicle.—The Infusion with the Tincture. Salts of its alkaloid pilocarpine, injected subcutaneously.

Dose of Pulvis Jaborandi, 15 to 30 grains, in hot water.

Infusum ———, conc., $\frac{1}{4}$ to 1 ounce.

Tinctura ———, 2 to 3 drachms.

The Hydrochlorate or Nitrate of Pilocarpine, for subcutaneous injection, 3 to 6 minims of a five per cent. solution.

JALAPA. *Jalap*

The dried tubercles of *Exogonium Purga*, a Mexican plant (Nat. Ord. *Convolvulaceæ*), contain a peculiar resin, from which Jalap derives its cathartic properties. Jalap is an active drastic cathartic, producing copious watery evacuations. It irritates the intestines, and may cause nausea and griping. It is given as a purgative together with aromatics in constipation and inflammatory affections; as a hydragogue, combined with calomel, in dropsies; and sometimes as a vermifuge. It is a convenient preparation for children, having little taste. It must not be used during pregnancy, or when there is much irritation of the intestines.

icle.—The Compound Powder in milk or wafer capsules. The P. B. set in pill with cinnamon powder. The resin or Jalapin in pill with sa. Jalapin in solution in tincture of ginger.

ss of Pulvis Jalapæ, 2 to 5 grains for children, 10 to 30 grains for adults.

Pulvis ——— co., 20 to 60 grains.

Resina ———, 2 to 5 grains.

Tinctura ———, $\frac{1}{2}$ to 2 drachms.

*Extractum —, 5 to 15 grains.

*Jalapin, the purified resin of jalap, 2 to 4 grains.

A Cathartic and Diuretic.—Dr ELLIS.

*JUGLANS REGIA. *The common Walnut Tree*

The leaves of the common Walnut (Nat. Ord. *Juglandaceae*) have been highly extolled as a remedy in scrofulous affections. They are said to exert an alterative influence in the blood, to cause the disappearance of various chronic eruptions and of other disorders traceable to a strumous cachexy. They have been especially recommended in scrofulous caries of the bones, inflammation of the eyes, chronic bronchitis, and in impetigo and eczema. The bark

has cathartic properties. The pericarp, from the time of Hippocrates, has had a reputation as a vermifuge.

Dose of Extractum Juglandis (foliorum), 3 grains.
Decoctum, vel Infusum Juglandis, 1 to 2 ounces.
Decoctum Juglandis Corticis, as an astringent.

1 ℞ Ext. Juglandis, gr. vj.
 Syr. Simplicis, ʒj. Misce.

Dose, for children, 2—3 dessert spoonfuls in the day; to adults, 1—2 ounces.

In Scrofula.—M. NEGRIER.

2 ℞ Ext. Fol. Juglandis, ʒj.
 Adipis, ʒx.
 Ol. Bergamotæ, ℥iij.

Misce: fiat unguentum.

To be used as a Friction in Scrofula.—M. NEGRIER.

3 ℞ Ext. cort. Juglandis, ʒj.
 Aquæ calidæ, ʒviij.

Misce: fiat gargarisma.

In Chronic Enlargement of the Tonsils.—Dr BECKER.

JUNIPERUS. *Juniper*

The oil distilled in Britain from the unripe fruit of Juniper Communis (Nat. Ord. *Coniferae*) is a stimulating diuretic and diaphoretic. It is chiefly employed as an adjuvant to other remedies, to increase the flow of urine in cases of dropsy. Huile de Cade, or Juniper Tar, is employed in chronic skin affections.

Vehicle.—The Spirit as an adjunct to diuretic mixtures. An infusion of the fruits (1 oz. to a pint of boiling water). The Oil as an inhalation (Throat Hosp. Pharm.).

Dose of Oleum Juniperi, 1 to 3 minims.

Spiritus ———, ʒ to 1 drachm.

*Extractum ———, 1 to 3 drachms.

*Spiritus ——— co. 1 to 4 drachms. (juniper oil, 1½ drachms; oil of carraway and oil of fennel, each 10 minims; alcohol, 5 pints; water, 5 pints.)

1 ℞ Junip. baccarum, ʒiss.
 Cremoris Tartari, ʒj.

Aquæ serventis, Oj. Infunde per horam, et cola.

A teacupful three times a day, with 40 drops of sweet spirits of nitre.

In Dropsy.—Dr ELLIS.

℞ Ol. Juniperi, ℥ss.
 Sp. Ætheris Nit.

℞ Sp. Juniperi co. ℥ij.
 Tinct. Valerian. co. ℥ss.
 Aquæ Pimentæ, ℥iiss. Misce.

A fourth part for a dose.

A Stimulant.—Dr HOOPER.

KAMALA

Kamala consists of the glandular powder and hairs which are the fruits of a tree called *Rottlera Tinctoria* (Nat. l. *Euphorbiaceæ*). It is red and resinous in appearance, nearly soluble in spirit, and may be suspended in water. It is chiefly used for tapeworm. The administration must be followed by a purge.

Stability.—To nearly 80 per cent. in alcohol and ether.

Vehicle.—In water or sweetened aromatic water, suspended with acacia powder in honey or thick gruel.

Dose of Pulvis Kamalæ, $\frac{1}{2}$ to 4 drachms.

**Tinctura* —, 1 to 2 drachms.

- 1 ℞ Pulv. Kamala, gr. v—x.
 Syr. Aurantii, 3ss.
 Mucilag. Tragacanth. ʒj.
 Aque, ʒj. Fiat haustus.

To be taken early in the morning and four hours after a purge—for a child of two to five years.

In Tania Solium.—Dr T. H. TANNER.

*KERMES MINERALE

It is prepared from sulphide or sulphuret of antimony and alkaline carbonates or hydrates. It is very similar in action to Sulphurated Antimony, and is used in the same manner.

Dose.—1 to 5 grains; as an emetic, 5 to 15 grains.

- 1 ℞ Kermetis Mineralis, ʒj.
 Ext. Dulcamara, q. s. Fiat pil. xl.
 Sumat unam omni hora.

In Chronic Catarrh.—SOBERNHHEIM.

- 2 ℞ Kermetis Mineralis, gr. iss.
 Ipecacuanha, gr. v.
 Misce bene, et div. in chart. vj. Sumat j 4tis horis.

In Hooping-cough.—MONTPELLIER HOSP.

KINO. *Kino*

The inspissated juice from incisions made in the trunk of *Pterocarpus Marsupium* (Nat. Ord. *Leguminosae*), from Malabar. It occurs in small, translucent, reddish-black fragments. It is a powerful astringent and styptic. It is useful in obstinate diarrhoea and dysentery, pyrosis, gonorrhoea, leucorrhoea, and to arrest internal hæmorrhages. Combined with cinchona it is given in intermittent fevers. *Externally*, it is applied to indolent ulcers, and as a gargle in relaxed sorethroat.

Vehicle.—Kino dissolved in glycerine. The Tincture in chloroform water, or cinnamon water and syrup of ginger, or in chalk mixture. The compound powder in pill with glycerine of tragacanth.

Incompatibles.—Alkalies and carbonates, mineral acids, metallic salts.

Dose of Pulvis Kino, 10 to 30 grains.

Tinctura —, 1½ to 2 drachms.

Pulvis — co. (contains Opium 1 in 30), 10 to 30 grains.

- 1 ℞ Kino, ʒij.
 Camphoræ, ʒss.
 Oxidi Zinci, ʒss.
 Pulv. Cretæ Aromat. ʒj.

- 3 ℞ Pulv. Kino co. gr. x.
 Inf. Cascarillæ, ʒvj.
 Aquæ Cinnam. ʒij.
 Syr. Papav. ʒj.
Misce : fiat haustus, bis indies sumendus.
 In Chronic Dysentery.—DR GREGORY.
- 4 ℞ Kino, ʒj—ʒij.
 Aluminis, gr. xx—xxx.
 Aquæ ferventis, Oij.
Infunde per horam, et cola. Fiat injectio.
 In Chronic Urethritis.—SWEDIAUR.
- 5 ℞ Tinct. Kino, ʒj.
 Aluminis, ʒij.
 Inf. Lini. ʒxv. Fiat injectio.
 In Uterine Cauliflower Excrescences.—SIR G. CLARKE.
 KOUSSEO see CUSSO.

KRAMERIA. *Rhatany*

The root of *Krameria Triandra* (Nat. Ord. *Krameriaceæ*), of Peru, is tonic and powerfully astringent. It is given in the same cases as Kino. *Externally*, it may be used in fistula or prolapsus ani. The powder is employed as a dentifrice in bleeding or spongy gums. Lozenges of the extract are useful in relaxed throat.

Vehicle.—The Tincture in chloroform water or chalk mixture. A cold water infusion.

Incompatibles.—Alkalies, salts of iron and lead.

Dose of Pulvis *Krameriæ*, 20 to 30 grains.

Extractum —, 10 to 30 grains.

Infusum —, 1 to 2 ounces.

Tinctura —, $\frac{1}{2}$ to 2 drachms.

*Suppositorium—, as a local astringent.

- 1 ℞ Pulv. Rhatanis, ʒiv.

Tere Camphoram cum spiritu, et dein misce omnia, ut fiat pulvis denti-
fricius.

DR A. T. THOMSON.

LAC

The fresh milk from the cow, *Bos taurus*, is used in the preparation *Mistura Scammonii*.

LACTUCA. *LACTUCARIUM

Lettuce. Lettuce Opium

The flowering herb of the Wild Lettuce, *Lactuca Virosa* (Nat. Ord. *Compositæ*), is sedative, anodyne, antispasmodic, diaphoretic, diuretic, and slightly laxative. It is given in dropsies, phthisis, and to allay irritability of the mucous membrane in catarrh. *Lactucarium* is the dried juice of the cultivated plant, procured by cutting the stalks of the leaves while growing, and allowing the white juice which exudes to dry spontaneously. It resembles opium, though less active in its power of promoting sleep and allaying pain. It is sometimes used externally.

Vehicle.—*Lactucarium* in pill with confection of roses.

Dose of *Extractum Lactuæ*, 5 to 15 grains.

**Lactucarium*, 3 to 8 grains.

**Tinct. Lactucarii*, $\frac{1}{4}$ to 1 drachm.

- 1 ℞ Ext. *Lactuæ*,
 Ext. *Lupuli*, ana gr. v.
Misce: fiant pilulæ duæ, horâ somni sumendæ.

Dr PARIS.

Misce, et div. in pil. ij, horâ somni quæque nocte sumend.

Mr STONE.

- 4 ℞ Ext. *Lactuæ*. gr. xvj.
 Ext. *Papaveris albi*, gr. xij
 Pulv. *Aloes co.* gr. xvij.
 Ol. *Cinnam.* m℥j.
Misce. Divide in pil. xij. Capiat duas omni nocte.

An Anodyne and Aperient.

LAUROCERASI FOLIA. *Cherry-laurel Leaves*

The leaves of the common Cherry-laurel, *Prunus Laurocerasus* (Nat. Ord. *Rosaceæ*), yield a small quantity of hydrocyanic acid when distilled with water. Laurel water (*Aqua Laurocerasi*) is anodyne and sedative, and may be employed where hydrocyanic acid is indicated. It is, however, a most uncertain preparation.

Incompatibles and Antidotes.—As for Hydrocyanic acid.

Dose of Aqua Laurocerasi, 5 to 30 minims.

- 1 ℞ Aqua Laurocerasi, ʒj.
 Aqua Menthæ Pip. ʒij.
 Inf. Quassia, ʒiv.
 Misce. ʒss three times a day.

In Dysentery, &c.—AUGUSTIN.

- 2 ℞ Aqua Laurocerasi, ℥xij.
 Sp. Ammon. Aromat. ʒj.
 Sodæ Bicarb. ʒj.
 Tinct. Calumbæ, ʒij.
 Aqua Anethi, ad ʒvj. Misce.
 One tablespoonful twice a day.

In Cardialgia.—Dr T. H. TANNER.

- 3 ℞ Aqua Laurocerasi, ʒiv.
 Etheris, ʒj.
 Ext. Belladonnæ, ʒij. Misce: fiat lotio.

In Neuralgia.—ROUX.

- 4 ℞ Aqua Laurocerasi, ʒiiss.
 Ol. Amygdalæ, ʒij.
 Cera Albæ, ʒss.

Liqua ceram cum oleo, et misce cum aquâ laurocerasi, bene terendo.
 Fiat unguentum.

As an Application to Burns.—ROUX.

LAVANDULÆ OLEUM. *Oil of Lavender*

The oil distilled in Britain from the common Lavender, *Lavandula Vera* (Nat. Ord. *Labiatae*). It is aromatic, carminative, and stimulant. Lavender is given in nervous affections, flatulence, colic; and is employed as a corrective adjunct to other medicines.

Dose of Oleum Lavandulæ, 1 to 4 minims.

Tinctura ——— composita, ʒ to 2 drachms.
 Spiritus ———, 30 to 60 minims.

- 1 ℞. Ol. Lavandulæ,
 Adipis Myristicæ,
 Butyri Cacao, ana partes æquales.
 Misce: fiat unguentum.

To Stimulate the Growth of Hair.—GRIFFITH.

LIMON. *Lemon*

The ripe fruit of *Citrus Limonum* (Nat. Ord. *Aurantiaceæ*) imported from Europe. It is used in the preparation of *Limonis Cortex* and *Limonis Succus*.

LIMONIS CORTEX. *Lemon Peel*

The outer part of the rind of the fresh fruit of *Citrus Limonum*. It yields an essential oil. It is carminative, stimulant, and rubefacient. It is useful in dyspepsia, and in cases requiring a warm aromatic. The Tincture and Syrup are employed to flavour mixtures, &c.

**Citrus Bergamia*. The essential oil of the rind of the fruit is used, under the name of Essence of Bergamot, on account of its pleasant odour, in ointments, liniments, &c.

Incompatibles.—Mineral acids.

Dose of Oleum Limonis, 1 to 4 minims.

Syrupus ——— 1 to 2 drachms.

Tinctura ——— ½ to 2 drachms.

- 1 ℞. Cort. recent. Limonum, No. j ad ij.
 Aquæ frigidæ, Oij.

Macera per horas vj, et cola.

As a Diluting Drink for Invalids.—MR BRANDE.

- 2 ℞. Sem. Limonum, ʒij.
 Aquæ, lb. ij. Fiat emulsio, et adde
 Sacchari albi, ʒij. M.
 Half a cupful every two hours.

In Hysteria.—VON HILDEBRAND.

LIMONIS SUCCUS

The fresh expressed juice of the ripe fruit of *Citrus Limonum*. It is refrigerant, antiscorbutic, astringent. It is useful in febrile and inflammatory disorders, in a diluted

form, as a beverage; and in scurvy and rheumatism. *Externally*, it is sometimes applied in pruritus and in uterine hæmorrhage. (See ACIDUM CITRICUM.)

Dose.— $\frac{1}{4}$ to 4 ounces.

- 1 ℞ Succi Limonis recent. f 3j—ij.
 Aque Camphoræ, f 3j.

Misce: fiat haustus, ter die sumendus.

In Acute Rheumatism.—Dr G. O. REES.

Aque, f 3xv. Fiat injectio.

In Alkaline Leucorrhœa.—Dr ASHWELL.

LINI FARINA, SEMEN, ET OLEUM

Linseed Meal. Linseed. Linseed Oil

The ground seeds of the common Flax, *Linum Usitatissimum* (Nat. Ord. *Linacæ*), deprived of the oil, form Linseed meal. They are bland and sweet to the taste, and possess the property of drying when exposed to the air. The coverings of the seeds contain a large quantity of vegetable mucilage. They are demulcent and emollient, and are given in catarrhal affections and inflammatory disorders of the mucous membranes and genito-urinary passages. *Externally*, Linseed meal, mixed with water, forms a most valuable poultice. Linseed oil may be mixed with lime-water to form an application to burns and scalds.

Incompatibles—For the Infusion; preparations of metallic salts.

Dose of Infusum Lini, ad libitum.

Cataplasma Lini and Oleum Lini are for external application.

- 1 ℞ Inf. Lini, ʒiij.
 Ol. Olivæ, ʒij.
 Vitelli Ovi unius.
 Syr. Althææ, ʒj.

Fiat mistura secundum artem, capiat æger cochl. j amplum subinde.

A Demulcent in Ardor Urinæ, &c.—Dr NELIGAN.

- 2 ℞ Inf. Lini, ʒivss.
 Tinct. Camph. co. ʒiij.
 Aquæ flor. Aurant. ʒix.

Misce: sumat cochl. ij majora ter indies.

As a Demulcent in Coughs.—Dr GREGORY.

- 3 ℞ Flor. Anthemidis,
 Sem. Lini contus. ana ʒss.
 Aquæ fervidæ, ʒvj. Macera, et cola: dein adde
 Opii, gr. vj—xvj. Misce: fiat enema.

An Emollient and Anodyne.—Dr COPLAND.

- 4 ℞ Hordei farinæ,
 Lini farinæ, ana part. æquales.
 Decoct. Malvæ seu Althææ, q. s.

(Rub the meal in the decoction, and cook it to a fit consistence, frequently stirring it. The poultice must be applied between two cloths.)

A common Emollient Application.—TROUSSEAU and REVELL.

*LINUM CATHARTICUM. *Purging Flax*

This diminutive plant grows plentifully in dry situations throughout Europe. It is used as a cathartic, and is tolerably active in its operation, though not dangerous. The powder of the dried plant may be given in doses of 1 drachm or more.

- 1 ℞ Lini Cathartici, herbæ recentis, ʒiij.
 Aquæ ferventis, ʒij.

Digere per horas duas in vase clauso, cola et adde

Tinct. Cardam. co ʒj. Fiat haustus.

In simple Constipation.—Dr NEUGAN.

*LITHIA. *Lithia*

The oxide of the alkaline metal, Lithium, a silver-white, brilliant ductile metal.

LITHIÆ CARBONAS. *Carbonate of Lithia*

A white powder. It is antacid, diuretic. It is useful in acidity of the urine, lithic deposits, gout, rheumatic arthritis. It is more diuretic than the corresponding salts of potash or soda.

Solubility.—1 in 100 of water; insoluble in alcohol.

Vehicle.—The powder in water capsules or in the form of the effervescing liquor.

Dose of Lithia Carbonas, 3 to 6 grains.

Liquor Lithiæ Effervescens, 5 to 10 ounces.

LITHIÆ CITRAS. *Citrate of Lithia*

A white amorphous powder; deliquescent. It is converted into a carbonate in the system, like the other alkaline citrates. Its properties are similar to the Carbonate.

Solubility.—1 in 2½ of water, 1 in 6 of glycerine.

Vehicle.—In water with syrup of lemons, orange peel, or decoction of liquorice. The guaiacate in pill.

Dose of Lithiæ Citras, 5 to 10 grains.

—— Guaiacate, 2 to 5 grains.

1 ℞. Lithiæ Citratæ, gr. x.
 Acidi Citrici, gr. xx.
 Syr. Aurantii, ʒss.
 Aquæ, ʒij.

(To be taken in a state of effervescence with gr. xiv of Bicarb. Soda dissolved in ʒij of water.)

A Diuretic and Antilithic.—Dr GUY.

LOBELIA. *Lobelia*

The herb in flower, dried, of *Lobelia Inflata* (Nat. Ord. *Lobeliaceæ*) of America owes its activity to a peculiar alkaloid. In small doses, it is diaphoretic and expectorant; in larger doses, antispasmodic, sedative, and emetic. Like tobacco, it is poisonous when given in large quantities. It is chiefly employed in spasmodic asthma, and in other affections of the pulmonary passages attended with dyspnoea. It forms a useful adjunct to diuretics.

Vehicle.—Decoction of liquorice, decoction of senega, infusion of linseed.

Antidote.—Internal and external stimulants, strong tea, tannic or gallic acid.

Dose of Tinctura Lobeliae, 10 to 30 minims; as an emetic, 4 drachms.
Tinctura ——— *Ætherea*, 10 to 30 minims.

- 1 ℞ Tinct. Lobeliae, ʒj.
 Decocti Malvæ, ʒvj. Misce: fiat mistura.

A spoonful to be taken every two or three hours.

As an Expectorant.—RADIUS.

- 2 ℞ Tinct. Lobeliae, ʒss.
 Aque Anethi, ʒij.
 Aque, ʒiv. Misce: fiat mistura.

One sixth part for a dose.

In Asthma.—Dr HOOPER.

- 3 ℞ Tinct. Lobel. Æth. ʒij.
 Mist. Amygdal. ʒviss.
 Succi Conii, ʒij.
 Syr. Hemidesmi, ʒj.

Misce: fiat mistura, cujus cap. cochl. amplum tertiis horis.

In Asthma and Paroxysmal Coughs.—Dr NELIGAN.

- 4 ℞ Tinct. Lobeliae Etheris, ʒij.
 Ammon. Carb. ʒij.
 Sp. Chloroformi, ʒj.
 Syr. Scillæ, ʒss.
 Decocti Senegæ, ʒvij. Misce.

A tablespoonful every four hours.

In Cardiac Asthma.—Dr J. MACROBIN.

LUPULUS. *Hop*

The dried strobiles of the female plant of *Humulus Lupulus* (Nat. Ord. *Cannabaceae*) of Britain. They contain a volatile oil. The bitter principle, Lupulin, is formed on the surface of the scaly bracts as small granules. Hops are tonic, aromatic, moderately narcotic, aphrodisiac, soporific, resolvent, discutient. They are useful in nervous derangements, low states of the system, insomnia, ovarian atony. A pillow of hops has been employed to induce sleep. *Externally*, they are applied in fomentation or poultice to painful tumours and swellings.

Vehicle.—The Tincture in peppermint or aniseed water. Lupulin in water at 140° F. for inhalation.

Incompatibles.—Mineral acids. Metallic salts.

Dose of Extractum Lupuli, 5 to 10 grains.

Infusum ———, 1 to 2 ounces.

Tinctura ———, ʒ to 2 drachms.

*Lupulina, 6 to 12 grains.

*Extractum Lupulinae, 3 to 6 grains.

*Tinctura ———, ʒ to 2 drachms.

- 1 ℞ Lupulinæ, gr. viij.

Mucilaginis, q. s.

Fiant pilulæ duæ, horâ decubitûs sumendæ.

In the Watchfulness of Mania, &c.—Dr NELIGAN.

- 2 ℞ Lupulinæ, gr. v.

Conf. Rosæ, q. s. Fiat pilula.

One pill three times a day.

In Dysmenorrhœa.—Dr LOMBE ATTHILL.

- 3 ℞ Ext. Lupuli,

Ext. Lactucæ,

Camphoræ, ana ʒj.

Misce: fiant pilulæ xij. Sumat ij dolore incipiente, et repetantur post horas ij, vel pro re natâ.

In Dysmenorrhœa.—Dr RIGBY.

- 4 ℞ Ext. Hyoscyami,

Camphoræ,

Lupulinæ, ana gr. iij.

Misce et fiant pil. ij, horâ somni sumendæ.

In Simple Wakefulness.—Dr J. B. STEWARD.

- 5 ℞ Tinct. Lupuli, ʒj.

Sp. Ammon. Aromat. ʒj.

Tinct. Gentianæ co. ʒj.

Inf. Sennæ, ad ʒvj. Misce.

One tablespoonful twice a day.

In Phosphuria with Constipation.—Dr T. H. TANNER.

- 6 ℞ Tinct. Lupuli, ʒj.

Inf. Rosæ, ʒv.

Acidi Sulph. dil. ʒj.

Aquæ Camph. ʒij.

Misce: fiat mistura. Sumat cochlearia duo ampla bis die.

In Menorrhagia.

- 7 ℞ Lupuli Strobil. ʒiiss.

Aquæ ferventis, Oj. Misce: sit pro inhalatione.

In Phthisis.—Dr THEOPHILUS THOMPSON.

*MAGNESIUM. *Magnesium*

A brilliant grey metal, malleable, converted into Magnesia by the action of air and moisture. The forms of Magnesia used in Pharmacy are—Magnesia (Heavy), Magnesia Levis, Magnesiæ Carbonas, Magnesiæ Carbonas Levis, and Magnesiæ Sulphas. Soapstone, commonly called French Chalk, is a silicate of magnesia and alumina.

MAGNESIA. *Magnesia*

A white powder of Heavy Carbonate of Magnesia deprived of its carbonic acid. It is antacid, alterative, antilithic, laxative. It is useful in dyspepsia, heartburn, pyrosis, gouty and lithic affections. As a laxative, it is very safe in the various disorders of children. Combined with rhubarb it is given in diarrhoea and as an ordinary purge. If taken too often, or in large doses as a purgative, it is said to accumulate and form concretions in the intestines.

Solubility.—Scarcely soluble in water, readily in acids without effervescence.

Vehicle.—Milk. Water, with syrup of ginger.

Incompatibles.—All acids.

Dose of Magnesia, 10 to 20 grs. as an antacid and alterative; 20 to 60 grs. as a purgative.

- 1 ℞ Magnes. ʒij.
 Pulv. Rhei, gr. xv.
 Pulv. Zingiberis, gr. v.

MAGNESIÆ CARBONAS LEVIS*Light Carbonate of Magnesia*

A very light white powder prepared from a cold solution of Sulphate of Magnesia and Carbonate of Soda, and the precipitate washed in boiling water. For medicinal properties see Magnesia.

Vehicle.—As for the Carbonate.*Dose.*—10 to 20 grs. as an antacid; 30 to 60 grs. as a purgative.***MAGNESIÆ CITRAS**

Citrate of Magnesia is prepared by combining Magnesia or its Carbonate with Citric Acid in solution. It is gently laxative and antacid.

Dose.—60 to 180 grains.

Liquor Magnesiæ Citratis contains the Citrates of Magnesia and Potash, and Syrup of Lemons. It is a gentle purge and antacid.

Dose.—5 to 10 ounces.

MAGNESIÆ SULPHAS

Sulphate of Magnesia. Epsom Salts

Occurs in colourless, transparent, rhombic prisms, and is bitter in taste. It is contained in sea-water, Seidlitz water, and Cheltenham salts. In small doses, it is diuretic; in large doses, a hydragogue cathartic, acting effectively, but without irritation. Being cooling in its operation, it is adapted for inflammatory disorders of all kinds. It is one of the most frequently used of all purgative medicines, and is very often conjoined with senna for a cathartic dose.

Solubility.—Readily in cold water.

Vehicle.—Lemonade. An effervescing mixture flavoured with syrup of lemons. Infusion of roasted coffee sweetened.

Incompatibles.—Alkaline carbonates, lime water.

Dose of Magnesiæ Sulphas 1 to 4 drachms.

Enema Magnesiæ Sulphatis is a good saline clyster.

- 1 ℞ Magnes. Sulph. ʒvj.
 Mannæ optimæ, ʒij.

- 8 ℞ Magnes. Sulph. ʒj—ʒiv.
 Syr. Aurantii, ʒij.
 Acidî Sulph. dil. ℥x.
 Aque Anethi, ʒj. Misce : fiat haustus.

Antiphlogistic purge. To this draught may be added, in cases of debility,
 1 gr. of Sulphate of Zinc, or Sulphate of Iron, or 2 gra. of Quinine.

Dr DRUITT.

- 9 ℞ Magnes. Sulph. ʒj.
 Antim. Tart. gr. j.
 Sp. Ætheris Nit. ʒij.
 Aque Menthæ, ʒx.

Misce : sumantur coch. magna tria, 4tâ quâque horâ.

An Active Nauseating Aperient for robust Persons.

Dr DRUITT.

- 10 ℞ Magnes. Sulph. ʒj.
 Antim. Tart. gr. ij.
 Aque, ʒviij. Misce : sumat unciam omni horâ.

In Asiatic Cholera.—Dr JEPHSON (U.S.).

- 11 ℞ Magnes. Sulph. ʒss.
 Mannæ, ʒij.
 Inf. Sennæ, ʒvj.
 Tinct. Sennæ, ʒij.
 Aque Menthæ vir. ʒj.
 Aque destil. ʒij.

Misce : fiat mistura. Sumat cochl. ij ampla omni mane, et repetatur
 post horas quatuor, si opus sit.

Mr ABERNETHY.

MALVA. *Mallow

The leaves of the common Mallow, *Malva Sylvestris* (Nat. ord. *Malvaceæ*), contain a considerable quantity of mucilage, which they yield to water. Their decoction is sometimes employed for its demulcent and emollient properties. It is given, as a beverage, in bronchitis, or in irritation of the intestinal canal, or urinary organs. *Externally*, the leaves are used as a fomentation to wounds, tumours, and painful parts.

Dose of Decoctum Malvæ, 1 to 3 ounces.

- 1 ℞. Decoct. Malvæ, ʒvj.
 Syr. Papaveris, ʒij.
 Oxymel. Scillæ, ʒj.
 Misce: sumat quartam partem quum tussis ardet.

MANGANESII SALES. *Salts of Manganese

The metal Manganese resembles iron. Its black binoxide well known. This is employed by chemists in the preparation of oxygen and chlorine. It has been used medicinally in the treatment of some cutaneous maladies, being applied in the form of ointment to the eruptions of scabies and herpes. The salts of Manganese are said to resemble those of iron in their tonic powers, but differ from them in being destitute of any astringent properties. They have been found to exert a remarkable power in causing the secretion of bile, and to act, in large doses, as purgatives. The chief preparations of Manganese which have been used in medicine are as follows:

Manganesii Carbonas. It is used in the same cases and doses as the Black Oxide.

Manganesii Iodidum. An alterative in the anæmia of the lungs, phthisis, cancer.

Manganesii Sulphas. An alterative in cutaneous diseases, given in doses of 5 to 10 grains; as a purge and cholagogue, in doses of 1 to 2 drachms.

Manganesii Oxidum Nigrum. It is given internally in doses of 3 to 20 grains three times a day.

Manganesh Oxidi Preparatum. It is useful in pyrosis and gastrodynia. Dose 10 to 30 grains.

Manganesh Phosphas. It is given in chlorosis, amenorrhœa, &c.

The *Permanganate of Potash* is mentioned among the Salts of Potash.

Vehicle.—The Black Oxide in wafer capsules. The Carbonate in pill freshly prepared by double decomposition with an equal weight of carbonate of sodium and sulphate of manganese and honey or glycerine and tragacanth as an excipient. The Iodide, as for Iodide of Potassium or as the Syrup of Iodides of Iron and Manganese. The Phosphate in form of syrup.

Syrup of Iodides of Iron and Manganese. Professor Proctor has a formula, each fluid drachm containing $4\frac{1}{2}$ grains of iodide of iron and $1\frac{1}{2}$ grain of iodide of manganese. Dose, 10 to 30 minims.

Syrup of Phosphates of Iron and Manganese, each fluid drachm containing $\frac{1}{2}$ of a grain of phosphate of iron and $\frac{1}{4}$ a grain of phosphate of manganese. Dose, 10 to 30 minims.

- 1 *R.* Manganesh Oxidi Nigri, ʒj.
Sodii Chloridi, ʒiij. Misce bene, et adde
Acidi Sulphurici, ʒj.
Aquæ ʒij.

(The Chlorine which is evolved from this mixture on the application of heat, forms a powerful local stimulant in certain cases of cutaneous disease, and in chronic rheumatism. The gas should be carefully confined to the part by the proper apparatus.)

Dr HOOPER.

- 2 *R.* Manganesh Carb.
Ext. Cinchonæ, ana ʒj. Misce, et div. in pil. 30.
Sumat j bis die, ante jentaculum et prandium.

In Chlorosis.—M. HANFON.

3. *R.* Manganesh Sulph.
Sodæ Carb. ana ʒj.
Mellis, q. s. ut fiat massa in pilulas granorum iv dividenda, quar. j. pro dosi.

Divide in pil. granorum iv. Sumat j ter in die.

MANNA. *MANNITA. *Manna and Mannite*

Manna is the concrete juice of *Fraxinus Ornus* and *F. undifolia* (Nat. Ord. *Oleaceæ*). The variety called Flake nna is the best. Manna has a sweetish and slightly er taste. It acts as a general laxative, though its ration sometimes causes flatulence. Its purgative pro- ty is owing to a peculiar unfermentable sugar, called nnite. This may be extracted from it by boiling alcohol, l will precipitate in white needles on cooling. It is a y agreeable cathartic. Both Manna and Mannite are l adapted for use in the affections of children, in obsti- e constipation, phlegmasia dolens, ascites, peritonitis, l in the disorders of weakly women.

Usability.—Mannite in water, 1 in 5; in rectified spirit, 1 in 120.

Uses of Manna, ʒ to 1 ounce.

Mannita, ʒ drachms for a child.

℞ Mannæ, ʒj.
 Potass. Tart. Acidæ, ʒss.

 An excellent Laxative for Children.—DR NELIGAN.

*MARRUBIUM. *Horseshoe*

Marrubium Vulgare (Nat. Ord. *Labiata*) is a very small herb, common in England. In the fresh state it has a strong and peculiar aromatic odour. Both fresh and dry, it has a bitter taste. It contains much mucilage, and is a popular

ulcent tonic in simple coughs. It is also a general
c, laxative, and antispasmodic.

ss of Marrubium, 30 to 60 grains.

Infusum Marrubii, 1 to 2 ounces.

R. Marrubii herb. exsic. $\mathfrak{z}\text{ss}$.

Aquæ destil. *servent.* \mathfrak{Oss} .

Macera per horam, et cola.

Colaturæ, $\mathfrak{z}\text{iss}$.

Tinct. Camph. co. $\mathfrak{z}\text{j}$.

Ext. Glycyrrhizæ, *pr.* x .

Misce. Fiat haustus, ter in die sum.

In Chronic Bronchitis with Inordinate Secretions.

Dr COPLAND.

MASTICHE. *Mastic*

his is a resinous exudation from the Pistacia Lentiscus
t. Ord. *Anacardiaceæ*), and occurs in yellowish, semi-
transparent, brittle tears, of a pleasant smell and taste. It
stimulant and diuretic. It is used as a masticatory in
chache and other complaints; and as an ingredient in
ulating tinctures in affections of the mouth and gums.

Solubility.—Readily in alcohol, ether, chloroform, oil of turpentine. In-
soluble in water.

ss, in powder, 20 to 40 grains.

R. Pulv. Mastiches,

Pulv. Crete, ana $\mathfrak{z}\text{ij}$.

Pulv. Iridis rad. $\mathfrak{z}\text{ss}$.

Ol. Rosæ, $\mathfrak{m}\text{ij}$. *Misce: fiat dentifricium.*

PHOEBUS.

MATICÆ FOLIA. *Matico Leaves*

he leaves of Artanthe Elongata, a Peruvian plant (Nat.
Piperaceæ), are extensively used in their native country
the purpose of arresting local hæmorrhages. They are
er applied whole, or dried and reduced to a coarse
der, and in that state pressed on to the bleeding part.
atico has been further recommended in this country as an
ingent for internal use. It contains an aromatic and a
er principle; but nothing has been found which can
e it a real astringent quality. Its reputation as a styptic
probably be owing to the mechanical properties of the
and its powder, or to the turpentine oil it contains.

Dose of Pulvis Maticæ, 30 to 120 grains.

Infusum Maticæ, 1 to 2 ounces.

*Tinctura Maticæ, 1 to 2 drachms.

- 1 ℞ Tinct. Maticæ, ʒvj.
 Inf. Krameris, ʒvij.
 Syr. Croci, ʒij.

Misce: fiat mistura, cujus capiat semiunciam tertiis vel quartis horis.

In the Diarrhœa of Phthisis, &c.—Dr NEELIGAN.

M. fiat mist. Sumat cyathum vinosum 4tâ quâque horâ.

In Menorrhagia.—Dr WEST.

- 3 ℞ Pulv. Matico, ʒijj.
 Pulv. Opii, gr. iij.
 Adipis, ʒj. Misce: fiat unguentum.

To Hæmorrhoids.—Dr YOUNG.

- 4 ℞ Tinct. Krameris, ʒij.
 Syr. Papaveris, ʒijj.
 Inf. Maticæ, ad ʒiv. Misce.

Two teaspoonfuls every four hours—for a child of seven years.

In Diarrhœa of Tuberculosis.—Dr T. H. TANNER.

MEDICATED PLEDGETS OF COTTON

Pledgets of cotton, saturated with various drugs, have been introduced for the local treatment of Uterine Disorders.

Bromide of Potassium	4 grs.	Hydrochlorate of Mor-	
Iodide of Potassium	4 "	phia ½ gr.
Iodine 2 "	Persulphate of Iron	. 3 "
Maticæ Tinctura	. 30 "	Tannic Acid	. . . 2½ "

The weight of a pledget is about 30 grains, and contains the proportion of each drug as enumerated.

MEL. *Honey*

A sweet fluid, prepared by the *Apis mellifica*, or Honey Bee. It tends to concrete on keeping. It contains two kinds of sugar, one of which crystallises, but the other does not. It is nutritious, demulcent, and laxative; but is chiefly used as a vehicle, as in *Mel Boracis*. It is employed gargles, and given as a demulcent in coughs.

Mel Depuratum is a gentle laxative.

ymel, which contains vinegar and honey, is employed as expectorant, and to form with water a cooling drink for febrile affections. Dose, 1 to 2 drachms.

Hydromel or honied water (1 part in 16), forms an agreeable refrigerant and slightly laxative drink.

Stomachic Mel, a mixture of wax and honey, is applied to the throat.

℞ Mellis,
Butyri recentis, ana ʒij.

Use ʒj—ij.

Dr COPLAND.

MENTHÆ. *The Mints*

Mints of Mint, both common and well-known plants, are employed in medicine. They belong to the Nat. Ord. *Labiatae* and are named *Mentha piperita*—Peppermint, *Mentha sylvestris*—Spear-mint. Both contain volatile oils, the *Peppermint* which, though somewhat similar, are yet easily distinguished. That of *Peppermint* is peculiarly pungent. They are employed in medicine for their carminative

and stimulant properties, especially in dyspepsia, flatulence, and diarrhoea. They are likewise used to flavour more unpleasant medicines, and to correct the griping action of a purgative dose. The distilled waters of the mints contain only these volatile oils. The infusions, decoctions, and extracts contain also a bitter principle, which is found in these plants, and which imparts to them tonic properties. The dried plants are rarely used alone, except in cookery. *Externally*, the oils are applied to parts affected with Shingles.

**Mentha Pulegium*, or Pennyroyal, possesses the same properties as peppermint, and is employed in the same forms.

Dose of Oleum Menthae viridis vel piperitæ, 1 to 4 minims.

Aqua—————, 1 to 2 ounces (used as a carminative vehicle).

Spiritus Menthae piperitæ, $\frac{1}{2}$ to 1 drachm.

 A Stimulating Expectoant.—Mr BRANDE.

*MENYANTHES. *Buckbean*

The leaves and root of *Menyanthes Trifoliata* (Nat. Ord. *Gentianeæ*) are tonic and astringent. In large doses, *Buckbean* is cathartic and emetic. It is very bitter to the taste, and contains a tonic principle. It is given in scorbutus, scrofula, atonic debility, and costive conditions of the bowels.

Dose of Pulvis Menyanthidis, 20 to 30 grains.
Infusum———, 1 to 2 ounces.
Extractum———, 10 to 15 grains.

- 1 ℞. Menyanthidis fol. ʒss.
 Pulv. Zingiberis, ʒij.
 Aquæ ferventis, Oss.

 Cutaneous Diseases. Dr COPLAND.

- 2 ℞. Ext. Menyanthidis, ʒss.
 Aceti Scillæ, ʒij.
 Tinct. Assafœtidæ, ʒss. Misco.
 Thirty drops three times a day.
 A Diuretic.—AUGUSTIN.

METHYLENI BICHLORIDUM, *see under* CHLOROFORM.

MEZEREUM. *Mezereon*

The dried bark of the root of the *Daphne Mezereon* or *D. reola* (Nat. Ord. *Thymelacææ*) contains a crystalline substance called *Daphnin*, but owes its medicinal properties to an acrid resin. These properties are not possessed to

any extent by the wood. Mezereon bark is powerfully irritant, reddening the external surface. *Internally*, it is a diaphoretic and diuretic; in large doses it produces extreme purging, and becomes a poison. It is given in various cutaneous diseases, in secondary syphilis, and in chronic rheumatism. It has been used as a vesicant, being first soaked in vinegar; and as a masticatory, 2 or 3 grains being chewed at a time. It is contained in Decoctum Sarsæ compositum.

Dose of Mezerei Cortex, 1 to 10 grains.

Extractum Mezerei Æthereum is used as an external irritant.

*Unguentum Mezerei is a stimulant application to ulcers.

MINERAL WATERS

ÆSOULAP.—Antacid, purgative.

APOLLINARIS.—Acidulous and gaseous.

BETHESDA.—Said to be a cure for Diabetes.

CARLSBAD.—Alkaline and gaseous; powerfully purgative.

CHALLES.—Sulphurous.

EMS.—Saline and gaseous.

FRIEDRICHSHALL.—Alterative, aperient.

HUNYADI JANOS.—Bitter aperient.

KISSINGEN.—Saline, gaseous, aperient.

KREUZNACH.—Saline, alterative, tonic; contains iodine.

MARIENBAD.—A gaseous bitter saline.

PULLNA.—A bitter saline, a mild purge, does not gripe.

ROYAT.—Alkaline.

SCHWALBACH.—Chalybeate.

SELTZER.—Gaseous, promotes the secretions generally.

SPA.—Gaseous, chalybeate.

VALS.—Like Vichy, but less lowering.

VICHY.—Chalybeate.

WOODHALL.—Gaseous, alterative.

Waters for the Table

APOLLINARIS.—Carbonate of soda.

BELLTHAL.—Carbonates of lime, magnesia, soda.

GEROLSTEIN.—The same.

SELTZER.—Carbonate of soda and chloride of sodium.

ST GALMER.—Carbonate of lime and chloride of sodium.

TANNUS.—Carbonate of lime and chloride of potassium and sodium.

WILHELMSQUELLE.—Carbonate of lime and chloride of sodium.

*MONARDA. *Horsemint*

The *Monarda punctata* (Nat. Ord. *Labiata*) is an American plant, and is used in American practice. It has yellow flowers, spotted with brown. The whole plant is aromatic, and contains a stimulant volatile oil, which has a powerful smell. It is used in infusion, in the same manner as Spearmint, and is given chiefly in flatulent colic. It has been recommended as an emmenagogue. *Externally*, it acts as a rubefacient.

Dose of Oleum Monardæ, 2 to 3 drops on a lump of sugar, as a carminative.

1 ℞. Ol. Monardæ, ℥ss.
 Tinct. Camphoræ, ℥ij.
 Tinct. Opii, ℥ij.

Misce. Fiat linimentum.

In Rheumatism and Fevers.—Dr ATLEE (U.S.).

MONESIA

The extract of *Chrysophyllum Buranheim* (Nat. Ord. *Sapotacea*) is imported from the West Indies in thick

brown cakes. It has a powerful bitter-sweet taste; possesses astringent properties, and is soluble in water. It has been given in France with much success as a remedy in leucorrhœa, menorrhagia, diarrhœa, and chronic bronchitis. *Externally*, it is applied in powder to atonic ulcers.

Dose of Monesiae, 2 to 10 grains.
Mistura Monesiae, $\frac{1}{2}$ ounce.
Syrupus ———, $\frac{1}{2}$ ounce.

- 1 \mathcal{R} . Ext. Monesiae, 3ss.

In Indolent Ulcers.—DEBOSNE.

MORI SUCCUS. *Mulberry Juice*

The juice of the Mulberry, *Morus nigra* (Nat. Ord. *Moraceæ*), has an agreeable subacid taste. It is sometimes employed as a grateful refrigerant in febrile disorders, and as an expectorant in coughs. It is slightly laxative.

Syrupus Mori is used as a colouring ingredient, and as an addition to refrigerant drinks in fevers.

MORPHIÆ ACETAS. *Acetate of Morphia*

A white powder, the acetate of an alkaloid prepared from Opium. It is less stimulating, but more sedative than opium.

Solubility.—1 in 12 of water, 1 in 5 of glycerine, 1 in 100 of rectified spirit.

Vehicle.—The Liquor in glycerine and water.

Dose of Morphine Acetas, $\frac{1}{4}$ to $\frac{1}{2}$ a grain.

Liquor Morphine Acetatis, 10 to 60 minims.

Injectio ————— Hypodermica, 1 to 6 minims for subcutaneous application.

*Injectio Morphine et Atropine Hypodermica, 8 minims for an injection, equal gr. $\frac{1}{4}$ of acetate of morphia, gr. $\frac{1}{16}$ of sulphate of atropia.

*Solution of Acetate of Morphia, 1 to 3 minims for an injection. (Strength, 1 gr. of the Acetate in every 6 minims.) The addition of sulphate of atropia lessens its constipating effects and increases its sedative action.

MORPHINE HYDROCHLORAS. *Hydrochlorate of Morphia*

A white powder of flexible acicular prisms of silky lustre prepared from Opium. It is anodyne and soporific. It is a more pleasant remedy than Opium, being less exciting and stimulating, and causing less headache, nausea, and constipation.

Solubility.—1 in 20 of water, 1 in 5 of glycerine, 1 in 60 of rectified spirit.

Vehicle.—The Liquor in glycerine and water.

Incompatibles.—Astringent vegetable infusions and decoctions, alkalies.

Antidote.—Strychnia $\frac{1}{4}$ of a grain to the $\frac{1}{2}$ grain of morphia.

Dose of Morphine Hydrochloras, $\frac{1}{4}$ to $\frac{1}{2}$ grain.

Liquor Morphine Hydrochloratis, 10 to 60 minims.

Trochisci——, 1 or 2 lozenges occasionally for cough.

Trochisci—— et Ipecacuanhæ, 1 or 2 occasionally.

Suppositoria Morphine and Suppositoria Morphine c. Saponæ, each contains gr. $\frac{1}{4}$ of the Hydrochlorate.

*Syrupus Morphie (consists of liq. morphie hydrochlor. 1 oz.; syr. simplicis, 17 oz. Each fluid ounce contains gr. $\frac{1}{2}$ of the salt). Dose, 1 to 2 drachms.

*Solutio Morphie Bimeconatis (Squire), 5 to 30 minims.

Apomorphie, $\frac{1}{16}$ to $\frac{1}{4}$ grain. A prompt and active emetic.

Apomorphie Hydrochlorate, $\frac{1}{16}$ to $\frac{1}{4}$ grain; or by subcutaneous injection, $\frac{1}{16}$ to $\frac{1}{8}$ grain of a freshly prepared solution.

BERRA.

MORRHUÆ OLEUM. *Cod-liver Oil*

A slightly yellow oil extracted from the fresh liver of the *Gadus Morrhua* or common Cod-fish. Asellus is one of the Latin names for this fish, whence the oil has been called *Oleum Jecoris Aselli*. Besides the ordinary constituents of oils, it contains some biliary matters, a minute proportion of iodine, and a smaller quantity of phosphorus. It has a peculiar odour and taste, varying in intensity in different specimens. It is demulcent, nutritive, and alterative. It is useful in emaciation of the system due to scrofula, phthisis, &c., in glandular swellings, diseased joints, rickets, tabes mesenterica, cutaneous affections, impaired nutrition from gout and rheumatism, marasmus of childhood. *Externally*, it is employed in neuralgic, rheumatic, and some local scrofulous affection. The administration of the oil, to be beneficial, must be continued for some considerable period. The dose should be given shortly after a meal, and the patient instructed to lie down for some time to aid its digestion. When the stomach rejects the oil, equal parts of Oil and Steel Wine may be retained.

Vehicle.—Milk, coffee, orange wine, porter, aromatic water. An elegant emulsion, containing 50 per cent. of the oil may be made with powdered gum acacia and an aqueous solution of phosphate of soda, or of hypophosphite of soda or calcium, flavoured with essential oil of almonds. The saline ingredients exert a correcting influence on the taste of the oil. In the form of inunction it may be rubbed into the body, the part being afterwards covered with flannel.

Dose.—1 drachm and upwards.

MOSCHUS. *Musk*

This is an odoriferous secretion found stored up in peculiar bags or follicles in the Musk Ox, *Moschus moschiferus* (Ord. *Ruminantia*). It exists only in the males. The best musk comes from China, and is very valuable as a perfume. It is in soft reddish-brown grains, which possess a strong and well-known odour, and a bitter, disagreeable taste. Musk is a diffusible stimulant and antispasmodic. It is given to rouse the system in low cases of typhoid and other fevers; and to act upon the nerves in chronic spasmodic diseases, as hysteria and epilepsy.

Vehicle.—In pill with confection of roses.

Dose of Moschus, 5 to 10 grains.

*Mistura Moschi, 1 to 2 ounces (musk 3, acacia 3, sugar 3, rose water 160 parts).

 An Antispasmodic and Excitant.—RADIUS.

***MUCUNA PRURIENS.** *Cowitch or Cowhage*

The hairs, with which the pods of this leguminous shrub (which used to be named *Dolichos*) are thickly covered, are employed to dislodge worms, more especially lumbrici. This they probably effect by mere mechanical irritation. The mode of administering cowitch is to dip the pods in syrup, and scrape off the spiculæ with the syrup until a mixture is obtained of the thickness of honey. The dose is from a teaspoonful to a tablespoonful, every morning for three times, following the last dose by a purgative. The following is a more precise formula :

- 1 ℞ Dolichi Pubis, ʒij.
 Syrupi, ʒss. Misce.

Give a teaspoonful every morning for three days, and a dose of castor oil after the last dose.

To Expel Lumbrici.—CORREA.

MYRISTICA. *Nutmeg*

This is the kernel of the seed of the *Myristica Officinalis*, or Nutmeg-tree (Nat. Ord. *Myristicaceæ*), a native of the Molucca Islands. The nutmeg is hard, of a greyish colour, and veined with red. It has an aromatic odour and taste, and contains a peculiar volatile oil, besides a fatty principle. To the volatile oil, nutmegs owe their stimulant and stomachic properties; but they are seldom prescribed alone, being generally given with less agreeable medicines, in order to disguise their flavour. *Mace* is a peculiar texture covering the shell of the nutmeg. It also is aromatic, and is sometimes used in medicine. The expressed oil of nutmegs may be used in making ointments.

Dose of Pulvis Myristicæ, 5 to 15 grains.
Oleum ———, 2 to 6 minims.
Spiritus ———, 30 to 60 minims.

Oleum Myristicæ Expressum is contained in *Emplastrum Calificiens* and *Picis*.

- 1 ℞ Cornu usti,

AMMON.

MYRRHA. *Myrrh*

A gum-resinous exudation from the stem of *Balsamodendron Myrrha* (Nat. Ord. *Amyridaceæ*) from Abyssinia. It is a stimulant tonic, antispasmodic, and astringent. It is useful in atonic dyspepsia, chlorosis, amenorrhœa, chronic bronchitis. *Externally*, the Tincture is employed as gargles for sorethroat and stomatitis; the powder for dentrifice, and as an application to foul ulcers.

Solubility.—Partially in water. More soluble in alcohol and ether.

Vehicle.—The Tincture in almond emulsion, or suspended by acacia in water, or infusion of orange with syrup of tolu added.

Dose of Pulvis Myrrhæ, 10 to 30 grains.

Tinctura —, $\frac{1}{2}$ to 1 drachm.

 Tinct. Myrrhæ, ʒss. Misco: fiat unguentum.
 To Irritable Eruptions of the Skin.—Dr NELIGAN.

NECTANDRÆ CORTEX. *Bebeery Bark*

The bark of *Nectandra Rodioi* (Nat. Ord. *Lauraceae*) from British Guiana. It is tonic and antiperiodic. It is useful in remittent and intermittent fevers, but is inferior to Quinine. It is employed in the preparation of *Beberis Sulphas*.

***NICKEL**

Sulphate of Nickel occurs in greenish-blue crystals. It is a nervine tonic and astringent, and is given in chlorosis and other forms of anæmia.

Dose, $\frac{1}{4}$ to 1 grain after food.

***NITRO-GLYCERINE.** *Glonoïn*

An oleaginous substance of a sweet taste prepared from a mixture of glycerine, sulphuric acid, and fuming nitric acid, poured into water and washed on a filter. It is violently explosive. In the form of a very diluted solution, it is useful in angina pectoris, albuminuria. A drop in contact with the lips, or the vapour, has caused distressing headache. Symptoms of poisoning have followed the administration of one-fortieth of a drop.

Vehicle.—The one per cent. solution on a lump of sugar or in water.

Dose.—A solution in spirit (1 in 100) one minim, cautiously increased.

NITROUS OXIDE GAS

The salt of Nitrate of Ammonia fused at a temperature of 350° to 450° F. is resolved into Nitrous Oxide Gas and the vapour of water. It is used in the form of inhalation to produce insensibility. The most immediate anæsthetic known. It is employed by dentists and surgeons in operations of short duration.

NUX VOMICA. *Nux Vomica*

The seeds of *Strychnos Nux Vomica* (Nat. Ord. *Loganiaceæ*) from the East Indies. It is very bitter in taste, and possesses active and dangerous properties. Both the bitterness and activity are chiefly owing to an alkaloid, *Strychnia*, which may be extracted from the seeds. *Strychnia* is a most powerful poison. Another alkaloid exists in the seeds, called *Brucia*, which resembles *Strychnia*, but is less powerful. *Nux Vomica* and *Strychnia* are powerful excitants of the spinal system of nerves, and cause convulsions when given in an overdose.

Nux Vomica is a bitter stomachic, laxative, nerve tonic, stimulant to the muscular system, and aphrodisiac. It is given in pyrosis and other forms of dyspepsia; in obstinate constipation; in paralysis; in debility after acute disease, as rheumatic fever; in hysteria; in chorea and other chronic spasmodic affections; and in impotence from nervous exhaustion. *Strychnia* and its *Liquor* are to be preferred to the Extract and Tincture of *Nux Vomica*, being of constant strength, which cannot be said of the latter.

Vehicle.—The Extract with liquorice powder to form a pill. The Tincture with chloroform water or compound infusion of gentian.

Antidotes.—Enema Tabaci. Infusion of Tobacco. Nicotina, 1 minim in warm water or wine.

Dose of Nux Vomica, 1 to 3 grains.

Extractum *Nux Vomica*, $\frac{1}{4}$ to 2 grains.

Tinctura —————, 10 to 30 minims.

In Skin Diseases.—Dr NELIGAN.

See STRYCHNIA.

***OLEA EMPYREUMATICA.** *Empyreumatic Oils*

These are oily liquids, obtained by the destructive distillation of various substances. Those obtained from vegetable matters are numerous, but not much employed. Thus, oils having stimulant properties are obtained by distilling Myrrh, Guaiacum-wood, and Box-wood. Those made by the destructive distillation of Belladonna and Hyoscyamus are narcotic in their action.

The Oleum Cornu Cervi, or Dippel's Animal Oil, is obtained by the distillation of Hartshorn shavings. It is produced along with ammonia, from which it is separated by rectification, by the destruction of the animal matters of the horn. It has a strong and disagreeable smell, and sharp acid taste. It acts as a stimulant and antispasmodic. In large doses, it is very poisonous. It is diaphoretic, and of use in destroying intestinal worms. It has been given in chorea and tetanus. *Externally*, it is applied as a rubefacient.

Dose of Oleum Cornu Cervi, 5 to 10 drops.

- 1** R. Ol. Cornu Cervi, ʒj.
Sp. Aetheris, ʒv. Misce.
Fifteen to thirty drops for a dose.
As a Stimulant and Antispasmodic.—BERAT.

Fiat massa in pil. granorum iv distribuenda.

An Antispasmodic.—T. H. LYON.

*OLEIC ACID. *Oleic Acid*

A yellow oily liquid, which crystallises from alcoholic solution in dazzling white needles. It is tasteless and inodorous, and of neutral reaction. Crude Oleic Acid is obtained in the manufacture of Stearin-candles. The acid itself is obtained by saponification of Olein, the fluid constituent of most fixed oils and natural fats. It dissolves morphia, atropia, aconitia, and the precipitated oxides of lead, mercury, and zinc, &c.

Solubility.—In alcohol and ether. Insoluble in water.

OLIVÆ OLEUM. *Olive Oil*

This oil is expressed from the fruits of the *Olea Europæa*, or common Olive-tree (Nat. Ord. *Oleaceæ*), extensively cultivated in Southern Europe and Syria. It is bland and pleasant to the taste, and, in considerable doses, acts as a gentle laxative. It is also employed as a demulcent and emollient. *Externally*, it is largely used in preparations of liniments, ointments, and plasters. With the alkalis, Olive Oil forms hard and soft soap.

Solubility.—1 in 2 of ether.

Dose of Oleum Olivæ, as a cathartic, about 1 ounce.

*Enema Olei Olivæ is laxative and anthelmintic.

- 1 ℞. Ol. Olivæ, ʒj.
 Mannæ, ʒiiss.
 Mucilaginis, ʒvj. *Misce.*

For Ringworm of the Scalp.—Mr C. HOGG.

*OLIBANUM

A fragrant gum-resin, chiefly the produce of an Indian tree, *Boswellia Thurifera* (Nat. Ord. *Amyridaceæ*). It has been used in medicine to check excessive secretions from the mucous membranes, as in bronchitis, leucorrhœa, &c. It occasionally enters into the formation of plasters, but is not so much employed as it used to be in former times. It is now chiefly used in fumigation.

 Decocti Cinchonæ, ℥iiss. Misce.

In Fluor Albus.—Dr E. CLARK.

OPIUM. MORPHIA

Opium is perhaps the most important drug in the whole *Materia Medica*. It is the half-dried juice obtained by cutting the unripe capsule of the White or Eastern Poppy, *Papaver Somniferum* (Nat. Ord. *Papaveraceæ*). There are many kinds of Opium in commerce. The Turkey or Smyrna Opium, which occurs in small irregular masses, covered outside with the capsules of a species of dock, is of excellent quality, and generally preferred. The various kinds of Opium produced in India are also good.

Opium is anodyne, soporific, sudorific, antispasmodic, a vascular and nervine stimulant, and a narcotic. It checks all the secretions, except those of the skin, mamma, and

testicle. Given in small doses, it produces, at first, some mental exaltation, quickening of the pulse, and heat of the skin. These effects are quickly followed by a feeling of drowsiness, and lastly sound sleep, with more or less perspiration. On awakening there is generally headache, nausea, furred tongue, inappetency, thirst, tendency to constipation. In an over-large dose, it is a dangerous narcotic poison, causing deep sleep; then stupor or coma, gradual slowness of breathing, feeble pulse, cold perspirations, contracted pupils, and death.

It is given in inflammations, unaccompanied with dyspnoea, especially of an asthenic type; in fevers—typhoid, typhus, intermittent, and hay-fever, and smallpox; in nervous disorders—insanity, delirium tremens, epilepsy, tetanus, sciatica, and other neuralgic affections; in pulmonary and chest affections—pneumonia, advanced phthisis, asthma, bronchitic and other coughs, pleurodynia, acute pleurisy; in diseases of the abdominal viscera—peritonitis, dropsy, gastric ulcer, colic and spasmodic affections, nervous and sympathetic vomiting, cholera, hepatitis, obstinate constipation; in mucous discharges—coryza, influenza, gastric catarrh, diarrhoea, dysentery, gonorrhoea, leucorrhoea; in urinary affections—inflammation and irritable states of the kidney, cystitis, painful and irritable states of the bladder, spasmodic stricture, acute orchitis; in calculous disorders—arising in the kidney, urinary bladder, gall bladder, intestines; in uterine affections, &c.—amenorrhoea, dysmenorrhoea, neuralgia, threatened abortion, hæmorrhage, placenta prævia, puerperal convulsions in asthenic patients, puerperal fever, phlegmasia dolens; in internal hæmorrhages; in ear, eye, and throat affections; in surgical cases—mortification, carbuncle, chronic ulceration, strangulated hernia; in cancer; in syphilis; in gout; in rheumatism; in diabetes.

Externally, Opium, in the form of fomentation, lotion, suppository or enema, is employed to allay pain. One of its alkaloids, Morphia, is very generally used in the form of subcutaneous injection.

The administration of Opium is contra-indicated in acute inflammations of the sthenic type, occurring in plethoric subjects; in fevers and other affections with contraction of

the pupil; in cerebral affections with suspected vascular congestion; in pulmonary disorders with hard dry cough and scanty expectoration; in affections of the pulmonary mucous membrane with excessive secretion; in states of the body with suspected venous congestion; in affections with high-coloured and scanty urine; in pregnancy; in heart disease.

Opium contains many peculiar chemical principles, but its narcotic properties are principally owing to one of these, the alkaloid Morphia. Morphia is extracted from Opium, and used separately, in combination with various acids, with which it forms salts soluble in water and spirit. It resembles Opium in its action, but is rather less stimulating. It may be used in the same cases. One grain of Morphia, or its salts, is equal in power to about six grains of Opium. The action of Morphia is assisted by a previous recent dose of ten grains of quinine.

Other chemical principles in Opium are :

Apomorphia, a prompt and active emetic.

Codeia, see page 206.

Cryptopia, Meconin, Meconic Acid, Narcein.

Narcotina; it has no narcotic properties. In five-grain doses it has been given as a substitute for Quinine.

Opianine, Papaverin.

Paramorphia or Thebaica, a dose of one grain produces tetanic spasms.

Solubility.—Of Morphia: 1 in 1000 of water, 1 in 100 of rectified spirit, 1 in 20 of strong solution of chloral hydrate.

Vehicle.—For Opium: Camphor water with syrup of tolu, peppermint or anised water with syrup of ginger. The Powder in pill with glyce rine of tragacanth.

Incompatibles.—Astringent vegetables, alkaline carbonates; salts of copper, iron, mercury, lead, zinc; Liquor Arsenicalis.

Antidotes.—In cases of poisoning by Opium the stomach-pump should first be used, or an emetic of Sulphate of Zinc given; the patient must be kept awake by continual walking between attendants; after the vomiting, cold water may be poured on the face and chest, and an infusion of gall-nuts given, followed by brandy and coffee. Artificial respiration may succeed when all other means have failed.

The long-continued use of Opium affects the appetite and digestion.

The doses of the various preparations of Opium, with their proportions, are as follow :

For internal use :

- Pulvis Opii, $\frac{1}{2}$ to 2 grains.
 Confectio Opii, 5 to 30 grains (Opium, 1 in 40).
 Extractum Opii, $\frac{1}{2}$ to 2 grains.
 Extractum Opii Liquidum, 10 to 40 minims (1 gr. in 23 minims).
 Pilula Saponis comp., 3 to 5 grains (1 in 6).
 Pulvis Opii comp., 2 to 5 grains (1 in 10).
 Tinctura Opii (Laudanum), 5 to 40 minims (1 gr. in 14 $\frac{1}{2}$ minims).
 Tinctura Opii Ammoniata, $\frac{1}{2}$ to 1 drachm (1 gr. in 96 minims).
 Trochisci Opii, 1 or 2 lozenges (each lozenge contains gr. $\frac{1}{2}$ Ext. Opii).
 Vinum Opii, 10 to 40 minims (1 oz. of Extract in 20 oz.).
 Pilula Ipecacuanhæ c. Scillâ, 5 to 10 grains (1 in 23).
 Pilula Plumbi c. Opio, 3 to 5 grains (1 in 8).
 Pulvis Cretæ Aromaticus c. Opio, 10 to 60 grains (1 in 40).
 Pulvis Ipecacuanhæ comp. (Dover's Powder), 5 to 15 grains (1 in 10).
 Pulvis Kino comp., 5 to 20 grains (1 in 20).
 Tinctura Camphoræ comp. (Paregoric), 15 to 60 minims gr. $\frac{1}{2}$ in a drachm).
 *Liquor Opii Sedativus (Battley), 10 to 20 minims (50 per cent stronger than Tinct. Opii).
 *Sydenham's Laudanum, 10 to 20 minims (1 gr. in 8 minims).
 *Jeremie's Laudanum, 10 to 20 minims (as Battley's).
 *Nepenthe, 5 to 40 minims (as Tinct. Opii).
 *Syrupus Opii (Fr. Ph.), 1 to 4 drachms.
 *Morphia, seldom given alone, $\frac{1}{2}$ to $\frac{1}{4}$ grain.

For external use.

- Emplastrum Opii (1 in 10).
 Enema Opii.
 Linimentum Opio (1 in 2).
 Suppositorium Plumbi comp. (1 gr. in each).
 Unguentum Gallæ c. Opio (1 in 14 $\frac{1}{2}$). Useful in hæmorrhoids.
 *Aqua Opii (1 in 19).

*ORIGANUM. *Marjoram*

The Origanum Vulgare (Nat. Ord. *Labiata*) is a native plant, of a fragrant smell and pungent taste. It contains a volatile oil, which is separated by distillation, and possesses stimulant and carminative properties. The infusion of Marjoram has been employed as a tonic, diaphoretic, and emmenagogue.

Dose of Oleum Origani, 5 to 10 minims.
Infusum —, 1 to 1½ ounce.

- 1 ℞ Glycerini Acidi Carbolicæ, mʒ.
Ol. Origani, mʒ.
Mist. Amygdalæ, ʒiv. Misce.
To be given three times a day.

In Fastid Diarrhœa.—*

OS USTUM. *Bone Ash*

The residue of bones burnt in the air to a white ash is used in the preparation of Calcis Phosphas and Sodæ Phosphas.

OVUM. *Egg*

The egg, which is so well known as an article of food, is produced by the hen of the domestic fowl, *Gallus Banckiva*. Within a calcareous shell it contains two parts, divided by a membrane, both fluid at first, but coagulated by heat. These are the white of egg (*albumen ovi*), and the yolk of egg (*vitellus ovi*). The former is important medicinally as being the best antidote to poisoning by any of the soluble salts of mercury or copper. The yolk of egg is a yellow oleaginous fluid, which forms an emulsion with water, and is of use in suspending many oily and other substances which cannot well be given in solution.

Oleum Vitelli Ovi (Paris Codex) is used as an application to sores and hæmorrhoids.

(The white of egg is used to make a liniment in the same manner.)
As an Application to Burns.—RADIUS.
- OXYMEL. See MEL.

*PANCREATIN.

Pancreatin is prepared from the fresh pancreas of the pig. The pancreas with lard, is bruised in a mortar, and

water added. The mass is then strained through muslin, forming the Crude Emulsion. The Emulsion is treated with ether, and allowed to stand until two strata are formed. The upper is an ethereal solution of pancreatized fat. This is filtered and the ether recovered by distillation. The result is Pancreatized Fat. Purified Pancreatic Emulsion consists of pancreatized fat, rectified spirit, distilled water and oil of cloves.

The property of Pancreatin is to assist in assimilating the fatty ingredients of food, and thus to relieve the pancreas of some part of its function. The Purified Emulsion is recommended as a valuable remedy in pulmonary phthisis. Dose, 1 to 4 drachms, in milk or water.

PAPAVERIS CAPSULÆ. *Poppy Capsules*

The nearly ripe capsules of the White Poppy, *Papaver Somniferum*, (Nat. Ord. *Papaveraceæ*) of Britain. They contain narcotic principles similar to those of opium, but less powerful and certain. The decoction of poppies is much used as an anodyne fomentation to painful bruises and swellings. Besides the narcotic principle, it contains much mucilage, and some oil derived from the seeds.

Dose of Extractum Papaveris, 2 to 5 grains.

Syrupus Papaveris, 1 drachm.

Decoctum Papaveris is for external use.

In *Acute Gonorrhœa*.—GASSICOURT.

PAREIRÆ RADIX. *Pareira Root*

The dried root of *Cissampelos Pareira* (Nat. Ord. *Meni-
maceæ*) has a slightly bitter taste. It is demulcent,
cathartic, aperient, and diuretic. It is specially given to allay
irritation and diminish mucous discharge from the bladder;
also prescribed in chronic pyelitis, gonorrhœa, and leu-
orrhœa.

Notes.—The Liquid Extract in infusion of orange or gentian, sweetened.
Incompatibles.—For the Liquid Extract,—salts of iron and lead.

Use or Extractum Pareiræ, 10 to 20 grains.

Extractum ———, liquidum, ʒ to 2 drachms.

Decoctum ———, 1 to 2 ounces.

*PARIETARIA

Wall Pellitory, *Parietaria Officinalis* (Nat. Ord. *Ulmaceæ*), is a valuable diuretic and lithontriptic. It is given specially in dropsies.

Dose of the Preserved Juice, 4 drachms.

Extractum *Parietariæ*, 10 grains.

PEPSINA. *Pepsin*

This is a peculiar albuminous principle which exists in the digestive gastric juice of man and other animals. Rennet, a fluid obtained by macerating the fourth stomach of the calf in salt and water, owes to Pepsin its power of coagulating milk. Rennet has been given in diabetes. Pepsin is a preparation of the mucous lining of the fresh stomach of the pig, sheep, or calf. It is employed to aid digestion, and is given in debilitated states of the system, anæmia, chlorosis, &c. It is best administered either in soup, or in the form of pill with glycerine, taken immediately after food. Corvisart, Boudault, Ballard, and others, have used the Pepsin in a solid form, mixed with starch, in cases of indigestion from deficient secretion and pain after food.

The "poudre nutritive" of Corvisart, *Pulvis Pepsinæ et Amyli*, is given (either neutral, or with 3 drops of lactic acid to a dose) in doses of 15 to 20 grains.

Vehicle.—In Powder sprinkled on bread and butter. In pill with glycerine. The Powder in increasing doses may be added to milk and swallowed in the curds and whey produced.

Dose of Pepsina, 3 to 5 grains.

*Vinum Pepsinæ, 1 to 3 drachms.

*Pepsina Porci.

*———— (Squire), 3 to 5 grains.

*———— (Bullock and Co.), 3 grains.

*Glycerinum Pepsinæ, 1 drachm.

*PESSARIES

As Suppositories have been employed for application by the rectum, Pessaries have been prepared for the administration of medicaments by the vagina. They act either locally or as derivatives. The best pessary is of conical form coated with glycerine and gelatine. The following are some of the formulæ:

Alterative, Mercurial Ointment, 30 grains.
Antacid, Bicarbonate of Soda, 15 grains.
Astringent, Acetate of Lead and Opium, 7 grains.
Caustic, Red Oxide of Mercury, 2 grains.
Cicatrising, Oxide of Bismuth, 15 grains.
Deodorant, Carbolic Acid, 2 grains.
Resolvent, Iodide of Potassium, 10 grains.
Sedative, Opium Powder, 2 grains.

*PETROLEUM. *Rock Oil. Persian Naphtha*

A bituminous substance flowing spontaneously from the earth in various parts of the world; semi-liquid, tenacious, of a reddish-brown colour, fetid odour, bitter acrid taste. It is stimulant, expectorant, antispasmodic, diaphoretic, a vermicide, disinfectant, rubefacient. It is useful in pulmonary disorders with deficient secretion; and in tapeworm, combined with tincture of assafoetida. *Externally*, it is employed in chilblains, chronic rheumatism, affections of the joints and skin, and paralysis.

Solubility.—Insoluble in water and alcohol. Partially soluble in ether. It combines with fixed and essential oils and sulphur.

Dose.— $\frac{1}{4}$ to 1 drachm.

hypophosphites of sodium, calcium, and magnesium, and in gelatine capsules.

Solubility.—1 in 4 of chloroform, 1 in 20 of absolute ether, 1 in 80 of almond or olive oil, 1 in 320 of absolute alcohol, 1 in 500 of glycerine. Very soluble in bisulphide of carbon.

Vehicle.—Phosphorus perles—gelatine capsules containing from $\frac{1}{10}$ to $\frac{1}{4}$ grain in an unaltered state. The phosphorated oil of the B. P. made into emulsion with yolk of egg, and flavoured with tincture of orange (recent), peppermint, or chloroform water. In pills, by dissolving phosphorus in suet or cocoa-butter, making into a mass with Canada balsam or phosphate of calcium, and coating with gelatine. Or dissolving the phosphorus in bisulphide of carbon in a pill mortar, adding a few drops of ether or chloroform—the heavy vapour of which prevents oxidation from the atmosphere—the liquorice powder and glycerine of tragacanth or mucilage of acacia to make a mass, and the pills quickly coated.

Antidote.—Emetics of sulphate of zinc, ipecacuanha wine, and sulphate of copper; French oil of turpentine; and followed by a saline purgative.

Dose of Phosphorus, gr. $\frac{1}{16}$ to $\frac{1}{8}$ in pill.

Oleum Phosphoratum, 5 to 10 minims.

Pilula Phosphori, 3 to 6 grains (gr. $\frac{1}{8}$ to $\frac{1}{4}$) made with suet.

*Syrupus ———, 5 to 10 minims.

*Tinctura ———, Ætherea (phosphorus, gr. x; ether, 2 ounces; agitate solution from time to time), 1 minim = gr. $\frac{1}{16}$.

Cerati albi, ʒss. Misce: ut fiat unguentum.
In Lupus, Syphilitic Tubercle, and Acne Rosacea.
Dr HOOPER.

*PHYSALIS ALKEKENGHI

The Winter Cherry, *Physalis Alkekengi* (Nat. Ord. *Solanaceæ*), is diuretic and febrifuge.

Dose of the Tincture, 1 to 3 drachms.

PHYSOSTIGMATIS FABÆ. *Calabar Bean*

The seed of the *Physostigma Venenosum*, a plant of Guinea (Nat. Ord. *Leguminosæ*), possesses powerfully sedative and poisonous properties, which render it active as a medicine.

The physiological effects of Calabar Bean are—

1. Paralysis of the spinal cord.
2. Paralysis of the striped and unstriped muscular fibres.
3. Stimulation of the secretory glands, especially the alimentary.
4. Contraction of the pupil of the eye.

It is given in small doses in tetanus, chorea, and poisoning by strychnia. In large doses it causes nausea, vomiting, purging, with a peculiar epigastric sensation relieved by eructations and excessive perspiration. It is principally employed as a topical aid in ophthalmic surgery in the form of gelatine discs, to produce contraction of the pupils and diminish presbyopia. Eserine is the active principle of Calabar Bean. A one per-cent. solution of the alkaloid and its sulphate have been used in ophthalmic surgery as a mydriatic and for contracting the pupil. Both prepa-

tions are quickly spoilt by oxidation. The Salicylate or the Hydrobromate of Eserine is equally as efficacious, and much more stable.

Vehicle.—The Extract in form of pill, with liquorice powder and glycerine tragacanth. The Extract dissolved in proof spirit, 32 grains to the ounce.
 * Extract for hypodermic injections in $\frac{1}{2}$ grain or $\frac{1}{4}$ grain doses, rubbed with 10 to 15 minims of water, with a little bicarbonate of soda added.
 * gelatine discs, or a solution of Sulphate of Eserine for ophthalmic uses.

Dose of Pulvis Physostigmatis Fabæ, 1 to 4 grains.

Extractum ———, gr. $\frac{1}{8}$ to $\frac{1}{4}$.

*Tinctura ———, 10 minims.

R. Ext. Physostigmatis, gr. ss.

PINI SYLVESTRIS OLEUM. *Oil of Scotch Pine Leaf

A colourless and transparent oil prepared from the leaves of *Pinus Sylvestris* (Nat. Ord. *Coniferae*). It has an agreeable odour of the fresh pine. A mild and useful stimulant in chronic laryngitis.

Vehicle.—Vapor *Pini Sylvestris* (oil of Scotch pine, 40 minims; light carbonate of magnesia, 30 grains; water to 1 ounce). A teaspoonful in a pint of water at 140° F. for each inhalation.

- 1 ℞ Ol. *Pini Sylvest.* ʒij—ʒiij.
 Magnes. Carb. *Levis*, gr. lx.
 Aqua, ad fl. ʒiij.

M. A teaspoonful in a pint of water, at 150° F., to be inhaled night and morning for ten minutes. (An increased stimulant character may be given to this inhalation by the addition of twenty grains of camphor to the mixture).

A Stimulant in Congestion of the Larynx.

Dr MORELL MACKENZIE.

PIPER NIGRUM. *Black Pepper*

The berries of *Piper Nigrum* (Nat. Ord. *Piperaceae*) are used as a condiment, on account of their pungent odour and fiery taste. Black Pepper is employed in medicine as stimulant and carminative. It has been given in gonorrhœa, in the same manner as cubebs; in intermittent fevers; and applied in ointment to ringworm. It is prescribed in confection in internal piles. It may be used in the form of a plaster.

Piperin is the active principle of the peppers, and may be prepared from them. It is analogous in chemical nature to the resins. It has a bitter and acrid taste, and has been much used in Italy as a substitute for quinine in the treatment of intermittents.

Vehicle.—The Confection. An Alcoholic Solution of *Piperin* with syrup in pimenta or cinnamon water.

Dose of *Pulvis Piperis*, 5 to 20 grains.

Confectio Piperis, 1 to 3 drachms.

**Piperin*, 3 to 10 grains.

**Unguentum Piperis Nigri* is an external stimulant.

PIX BURGUNDICA. *Burgundy Pitch*

A resinous exudation from the stem of the Spruce Fir, *Abies Excelsa* (Nat. Ord. *Coniferae*) from Germany. It is alterative, stimulant, and rubefacient. It is useful in psoriasis and other skin diseases. *Externally*, it is employed in plaster and ointment in chronic pulmonary affections, lumbago, and rheumatism.

Solubility.—Dissolves in twice its weight of glacial acetic acid.

Vehicle.—Softened by gentle heat and enclosed in gelatine capsules.

Capsules de Goudron.

Dose of *Burgundy Pitch, 5 to 20 minims.

Emplastrum Picis is the only official preparation.

- 1 ℞ Picis Burgundicæ, ʒv.

PIX LIQUIDA. *PIX NIGRA
Tar and Pitch

Tar is a blackish empyreumatic liquid obtained by the slow combustion of various species of Pine. It is made largely in North America. Pitch is the solid mass left on evaporating tar.

Both are stimulant, diaphoretic, and alterative. *Internally*, they are chiefly given in cutaneous diseases, especially lepra and psoriasis. They are useful in chronic catarrhal affections, and in disorders of the urinary passages. The vapour of tar has been found beneficial in chronic bronchitis and phthisis. Pitch has been given in piles. Both tar and pitch are much employed in the formation of ointments and plasters, to stimulate diseased parts to a healthy action, or for their protection.

Solubility.—In its own bulk of rectified spirit.

Vehicle.—Tar water sweetened. The glycerate of tar of the U.S. Pharmacopœia. In pills with wheaten flour or made into an electuary with sugar.

Dose of Picis Liquidæ, 20 to 60 minims.

*Aquæ Picis Liquidæ, 1 to ʒ pints.

*Pilula Picis, 2 to 3 pills.

*Tar Capsules, 2 or 3 capsules.

*Oleum Fini Sylvestris is applied in rheumatism.

Unguentum Picis is an external resolvent and stimulant.

***PLATINI SALES.** *Salts of Platinum*

When Platinum is dissolved in Aqua Regia the *Bichloride Platinum* is formed. Seventeen parts of this being added solution to six parts of common salt, the *Chloroplatinate Soda* is produced, and may be obtained on evaporation. These two salts have been used in medicine, and in their action they much resemble the corresponding preparations of gold. In large doses they are poisonous. They were used by Höfer to be very efficacious when given in syphilitic affections and rheumatism. They are also given asatives in skin diseases. The Chloroplatinate of Soda is more irritating than the Bichloride of Platinum.

Use.—In pill with liquorice powder. In solution with compound decoction of sarsaparilla or other demulcent.

Dose of Platini Bichloridum, $\frac{1}{4}$ to $1\frac{1}{2}$ grains.

Sodii Chloroplatinatum, 1 to 3 grains.

In Gonorrhœa and Leucorrhœa.—HÖFER.***PLUMBUM. Lead**

It occurs in nature as an oxide, as a sulphide called *galena*, and in saline combinations. The lead of commerce is chiefly extracted from galena ore.

The preparations of lead are used as astringents both externally and internally, and are also employed for their antispasmodic or sedative properties. They are poisonous in large doses. *Externally*, they are applied in plasters, ointments, and lotions to inflamed parts. They are given internally to check hæmorrhages and mucous discharges.

Painters' colic is due to poisoning by lead. It is characterised by a peculiar blue line along the edges of the gums, loss of power of the extensors of the hands, neuralgic pains in the limbs, and constipation.

Lead is eliminated from the system by a course of iodide of potassium. Its effects are greatly checked or mitigated in those employed in mines, by their taking a liberal quantity of milk before going to their work.

Incompatibles.—Hard water, all astringents, alkalies, mineral acids, and salts, vegetable acids, iodide of potassium. Lead salts in solution are incompatible with opium, a dense precipitate of meconate of lead being thrown down. Acetate of morphia is recommended as a substitute.

PLUMBI ACETAS. Acetate of Lead. Sugar of Lead

White masses of acicular crystals of acetous odour and sweet astringent taste.

This is the preparation of lead generally prescribed for internal administration. In small doses it is astringent, sedative, lessens morbid mucous discharges, controls hæmorrhages, diminishes the natural secretions. It is given in hæmoptysis, hæmatemesis, and other hæmorrhages, in diarrhœa, dysentery, phthisis, bronchitis. It must be administered cautiously. *Externally*, it is astringent, sedative, desiccant, and is applied to inflamed parts, discharging ulcers, and as an injection in gonorrhœa. It is used to form astringent lotions, injections, and ointments.

Solubility.—10 in 25 of water.

Incompatibles.—Sulphuric and tannic acids and their salts. See Plumbum.

Antidote.—Sulphate of magnesia or soda, followed by emetics and active purges. Afterwards give milk and opium.

Dose of Plumbi Acetas, 1 to 4 grains.

Pilula Plumbi c. Opio, 3 to 5 grains.

Suppositoria Plumbi comp.

PODOPHYLLI RADIX. *Podophyllum* E

The dried rhizome of *Podophyllum peltatum*, a can plant (Nat. Ord. *Berberidaceæ*), is an active and cholagogue. *Podophyllum*, alone or com an excellent purge. It is more powerful than and resembles aloes in its action, though less Some have compared it to mercury for its e the liver. It is generally combined with Henb resin is useful in hysteria, and for refractory pati very small quantity is required as a purge.

Solubility.—Totally in ammonia and rectified spirit, and ether.

Vehicle.—The Resin, in pill with extract of belladonna or he solved in tincture of ginger (1 grain to 1 fl. 3), or liquor am water added.

Dose of *Podophyllum*, 10 to 30 grains.

Resina Podophylli, $\frac{1}{4}$ to 2 grains.

M. et div. in pil. ij.

A Cathartic.—

POTASSA CAUSTICA. *Caustic Potash*

In hard white pencils, deliquescent, powerfully alkaline and corrosive. Solid potash (*Potassa Caustica* or *Potasse Hydras*) is a powerful caustic, destroying the tissues with which it comes in contact, on account of its very strong affinity for water. As it rapidly deliquesces, its effect spreads to a considerable distance from the place where applied, so that, when a limited action is desired, means must be taken to confine it. Caustic potash is used to form issues, to destroy hair and warts, and to remove the unhealthy surface from sinuous, cancerous, scrofulous, or syphilitic ulcers. It often gives great pain. It has been applied by some to the internal surface of the urethra in stricture.

Solubility.—2 in 1 of water.

- 1 ℞ Potassæ Causticæ, gr. ij.
 Aque destil. ʒj. Misco: fiat injectio.

To be used at the Commencement of Gonorrhœa.

GRIETANNER.

- 2 ℞ Potassæ fusæ, ʒij.
 Aque destil. ʒiv. Misco: fiat lotio.

In Chronic Forms of Favus.—Dr BURGESS.

POTASSÆ LIQUOR. *Solution of Potash*

A colourless preparation from carbonate of potash, slaked lime, and distilled water. Potash is antacid and alterative. In large doses, and undiluted, it is a violent caustic poison. Given internally in moderate doses, and much diluted with water, it counteracts acidity in the stomach, in the system, and in the secretions. It checks a tendency to lithic deposits, and is useful in gout and rheumatism. It counteracts heartburn, gastralgia, flatulence, and dyspepsia, when owing to an excess of acid in the stomach and intestines. As an alterative, potash is given in scrofula, in the first stage of phthisis, in secondary syphilitic disorders, in adhesive inflammations of serous membranes, as pleuritis, pericarditis; in various skin diseases. If too long continued it tends to weaken the system.

*The *Alkaline Solution* of Brandish is similarly employed.

Vehicle.—Decoction of barley; decoction of liquorice, with mucilage added.

Incompatibles.—Acids, acidulous and metallic salts, the preparations of ammonia, belladonna, henbane.

Antidotes.—Vinegar, lemon-juice, citric acid, demulcents.

Potassa cum Calce (Vienna paste) is frequently used to produce issues, being less deliquescent than simple potash. It is also prepared in the form of cylinders.

Dose of Liq. Potassæ, 10 to 40 minims, for adults; or of 1 to 5 minims for young children.

Brandish's Alkaline Solution, $\frac{1}{2}$ to 2 drachms in milk or beer.

POTASSÆ ACETAS. *Acetate of Potash*

White, foliaceous masses, very deliquescent. It is alterative; in small doses, diuretic; in large doses, purgative. It is useful in the sickness of pregnancy, various cutaneous affections, dropsy, rheumatism, gonorrhœæ.

Solubility.—1 in 1 of water, 1 in 4 of rectified spirit.

Vehicle.—Aniseed water with extract of liquorice. Water and syrup of tolu.

Dose.—As a diuretic, 10 to 20 grains; as a cathartic, 2 to 3 drachms.

- 1 ℞ Potass. Acet. ʒss—ʒj.

A Diuretic and Sedative.—PIERQUIN.

*POTASSÆ BENZOAS. *Benzoate of Potash*

A white crystalline salt. It is useful in cystitis with lithic acid diathesis.

Solubility.—1 in 1½ of water, 1 in 18 of rectified spirit.

Dose.—15 to 20 grains.

POTASSÆ BICARBONAS. *Bicarbonate of Potash*

Occurs in colourless rhombic prisms, or as a white powder, of a feebly alkaline taste; not deliquescent. It is less

irritant than the Carbonate. It is antacid, antilithic, alterative, diuretic. It is useful in dyspepsia, in gouty, lithic, and rheumatic disorders; in glandular enlargements and mesenteric disease; in various febrile and inflammatory complaints. It makes the blood and urine strongly alkaline.

Solubility.—1 in 4 of water. Insoluble in rectified spirit.

Vehicle.—Bitter infusions. Aerated waters.

One scruple of bicarbonate of potash neutralizes 14 grains of citric, or 15 grains of tartaric acid, or three drachms and a half of lemon-juice.

Dose of Potassæ Bicarbonas, 10 to 40 grains.

Liquor Potassæ Effervescens, 5 to 10 ounces.

- 15 ℞ Potass. Bicarb. ʒij.
 Inf. Anthemidis, ʒx.
 Tinct. Opii, ʒv.
 Syrupi, ʒj.

Fiat haustus sextis horis sumendus, et ad tertiam vel quartam vicem repetendus; deinde, nisi per se alvus dejecerit, sumatur medicamentum catharticum; eademque alternatio per mensem fiat.

In the Lithic Acid Diathesis.—Dr PARIS.

POTASSÆ BICHROMAS. *Bichromate of Potash*

This is an irritant poison. It is used to produce Valerianate of Soda. It has been employed by some Continental practitioners in the treatment of syphilitic disorders, apparently with considerable success.

Solubility.—1 in 10 of cold water, 1 in 1 of boiling water.

Dose.— $\frac{1}{4}$ to $\frac{1}{2}$ of a grain.

- 1 ℞ Potass. Bichromat. gr. xv.
 Ext. Gentianæ, ʒij.

Misce, et divide in pil. 80, quarum j sumat nocte maneque. (Should nausea or vomiting be produced, some opium may be added.)

In Syphilis.—Dr VICENTI.

*POTASSÆ BISULPHAS

Bisulphate of Potash. Sal Enisum

The residue from making nitric acid. It occurs in flattened rhombic prisms, of sour taste, and strongly acid reaction. It is sometimes employed as a cathartic and antiphlogistic.

Solubility.—It is more soluble than the sulphate.

Dose.—10 to 120 grains.

- 1 ℞ Potass. Bisulph.
 Sodæ Carb. ana ʒj.

Dissolve separately in two ounces of water, mix, and take while effervescing.

A Refrigerant Laxative.—Dr BARKER.

POTASSÆ CARBONAS. *Carbonate of Potash*

A white crystalline powder, alkaline and caustic; very deliquescent. It is less corrosive than caustic potash. It is antacid, antilithic, diuretic. It is inferior as a diuretic to the other salts of potash, but is preferable, as an antilithic, to the Bicarbonate.

Solubility.—1 in 1 of water. Insoluble in spirit.

Vehicle.—Infusion of orange.

One scruple of carbonate of potash neutralizes 17 grains of citric, or 18 grains of tartaric acid, or half an ounce of lemon-juice.

Dose of Potassæ Carbonas, 10 to 30 grains.

- 1 ℞ Succ. Limonis, ʒss.

 Ammon. Chlor. ℥ij. Sit fomentatio.
 To Bruises.—CADET.

POTASSÆ CHLORAS. *Chlorate of Potash*

Occurs in colourless crystalline plates, odourless, with a saline taste. It is stimulant and diuretic. It has been recommended in various forms of cachexia—as cancerum oris, chronic syphilis, phthisis, and scrofula; in typhoid and eruptive fevers—being supposed to exert a special power in purifying the blood. It is said to be a valuable remedy in preventing abortion. *Externally*, it is used as an appli-

cation to irritable and spongy gums; as a gargle in diphtheria and aphthous mouth; and as an injection in vesical catarrh. In some cases it has produced symptoms of poisoning. Its action should be carefully watched, especially in children.

Solubility.—1 in 18 of water, 1 in 2 of boiling water.

Vehicle.—In effervescing mixture, lemonade, chloroform water. Dissolved in glycerine as a topical application. Wyeth's compressed tablets.

Dose of Potassæ Chloras, 10 to 30 grains.

Trochisci Potassæ Chloratis, 1 to 6 lozenges.

*Gargarisma _____ (chlorate of potash 1 drachm, honey $\frac{1}{2}$ oz., water 8 oz.).

Aqueæ destil. ʒiv. Solve.

To indolent sores as a lotion, and internally in three times its bulk of vehicle.

Dr COPLAND.

POTASSÆ CITRAS. *Citrate of Potash*

A white powder, of saline acid taste; deliquescent. It is refrigerant, diaphoretic, diuretic, and a mild alkaline laxative. It is useful as an agreeable refrigerant in inflammatory disorders, in the lithic diathesis, gout, rheumatism, irritability of the stomach, obstinate vomiting. It renders the urine neutral or alkaline.

Solubility.—1 in 1 of water, 1 in 2 of glycerine.

Vehicle.—In effervescing mixture, made with bicarbonate of potash and lemon-juice, or citric acid with syrup of orange-peel. The official *Liquor Magnesie Citratæ*. In decoction of liquorice or infusion of senega.

Dose.—30 to 60 grains.

POTASSÆ NITRAS

Nitrate of Potash. Nitre. Saltpetre

White, colourless, opaque masses or fragments of prisms, of a saline taste. It is diuretic, diaphoretic, refrigerant, and a vascular depressant. It is given in acute inflammatory diseases, as rheumatism; in dropsies, scurvy, hæmoptysis, and menorrhagia, spasmodic asthma and dyspnoea, incontinence of urine in the young; to form a cooling drink in fevers, and to alleviate scalding in gonorrhoea. Paper saturated with nitrate of potash and burned, is used as an inhalation in asthma.

Solubility.—1 in 4 of water.

Vehicle.—In effervescing mixture, barley-water sweetened; as a diaphoretic, in hot gruel.

Dose of Potassæ Nitras, 5 to 30 grains, as a refrigerant and diuretic; 30 to 30 grains as a vascular sedative.

Potassæ Nitras Effervescens, 1 to 2 drachms.

POTASSÆ PERMANGANAS. *Permanganate of Potash*

A deep purple, prismatic, crystalline salt, inodorous, of a sweet astringent taste. It is alterative, stimulant, caustic, antiseptic, and deodorant. It is useful in diabetes, amenorrhœa, and a corrective of offensive evacuations. *Externally*, it is applied, in powder or lotion, to cancerous and fœtid ulcers; as a gargle in stomatitis and ulcerated sore-throat; as an ordinary disinfectant for the mouth. The solution of the B.P. is an imitation of "Condy's Disinfecting Fluid." This salt quickly parts with its oxygen and becomes decomposed in the presence of oxidisable material or organic matter, rapidly losing its colour, and forming a kind of curd. Hence, it is advised, that it should only be employed for topical applications, and not injected into any sinus or cavity, as the curd in question is apt to add to existent trouble by forming a fresh morbid nidus.

Solability.—1 in 16 of water.

Vehicle.—Pure water. In pill with cocoa butter.

Dose of Potassæ Permanganus, 1 to 2 grains.

Liquor Potassæ Permanganatis, 2 to 4 drachms.

1 ℞ Potass. Permang. gr. viij.

POTASSÆ PRUSSIÆ FLAVA

Yellow Prussiate of Potash is employed to prepare Acidum Hydrocyanicum Dilutum.

POTASSÆ SULPHAS. *Sulphate of Potash*

A colourless, hard, prismatic salt. It is a mild laxative, a diuretic, alterative, and hepatic stimulant. In large doses, it is an irritant poison. It is useful in dyspepsia, disorders of the liver, and in constipation. It is generally prescribed in combination with rhubarb. It is contained in compound ipecacuan powder, in which it is of use in effecting, by the hardness of its crystals, a perfect division of the other constituents.

Solubility.—1 in 10 of water, 1 in 4 of boiling water. Insoluble in rectified spirit.

Dose, as an alterative, 10 to 20 grains; as a purgative, 1 drachm.

POTASSÆ TARTRAS. *Tartrate of Potash.**Soluble Tartar*

Occurs in colourless, small, four- or six-sided prisms. It is purgative, diuretic, alterative. It is useful as a mild and cooling purgative, producing watery stools without pain. It also acts as an alkali upon the urine. It is frequently combined with senna to hasten its action and to moderate its tendency to griping.

Solubility.—1 in 1 of water. Insoluble in rectified spirit.

Vehicle.—In peppermint water with syrup of ginger.

Dose.—1 to 4 drachms.

- 1 ℞ Potass. Tart. ʒj.

POTASSÆ TARTRAS ACIDA

1 Tartrate of Potash. Potassæ Bitartras. Cream of Tartar

A gritty white powder, or fragments of cakes crystallised on one surface, of an acid taste, obtained from Crude Tartar deposited during the fermentation of grape juice. It is a purgative in small doses, diuretic; in large doses, a powerful cathartic. It is useful to form an acid drink in febrile and dropsical affections, and as a purgative in cases of renal or cardiac origin. To obtain an efficient purgative effect, it must be combined with some other active, as sulphur, jalap, gamboge, or scammony.

Solubility.—1 in 18 of boiling water, 1 in 200 of cold water. Insoluble in rectified spirit.

Use.—Made into a confection with marmalade. A saturated solution in infusion of fresh lemons sweetened.

Use, as a diuretic, 20 to 60 grains; as a laxative, 1 to 2 drachms; as a cathartic, 1 to 1 ounce.

℞ Liq. Ammon. ʒvj.

A Cathartic in Skin Diseases.—Dr NELIGAN.

***POTASSIUM. Potassium**

A soft metal, cutting like wax, of a silver-white colour, quickly changing to a leaden hue. When thrown on water it combines with the oxygen and sets the hydrogen on fire.

POTASSII BROMIDUM. Bromide of Potassium

Occurs in white cubical crystals, odourless, and of a pungent taste. It is alterative, soporific, antispasmodic, anaphrodisiac, anæsthetic. It is useful in chronic glandular enlargements, as bronchocele, scrofulous swellings, and those of the liver and spleen; in cutaneous diseases, especially associated with syphilis; in nervous disorders, as insomnia, mania; in chronic hysteria, croup, asthma, hooping cough; in nymphomania and priapism; in affection of the throat and larynx. It is considered a specific in epilepsy and the second stage of syphilis. It is apt, especially after a long administration, to produce a rash of an acneiform character. This bromide rash may be avoided by a combination with a saturated solution of salicylic acid (1 grain to each ʒj of water), or liquor arsenicalis.

Solubility.—1 in 2 of water, 1 in 6 of glycerine, 1 in 90 of rectified spirits.

Vehicle.—Vichy water, chloroform water with syrup of oranges, infusion of oranges with syrup.

Incompatibles.—Acids and metallic salts.

Dose.—5 to 30 grains.

- 1 ℞ Bromidi Potass. gr. vj ad viij.

POTASSII CYANIDUM. See ACIDUM HYDROCY

POTASSII IODIDUM. *Iodide of Potass*

Colourless or opaque cubical crystals, obtained by dissolving iodine in liquor potassæ, evaporating to dryness and heating the product with charcoal. It is preferable for internal administration, being less irritant. It is used in all cases where iodine is indicated. It renders soluble preparations of mercury more active by its solution. Its efficacy is increased by combining it with its weight of carbonate of ammonia. Its long use is apt to produce a characteristic petechial rash, a special antidote to lead poisoning.

Solubility.—4 in 3 of water, 1 in 3 of glycerine, 1 in 1 of spirit.

Vehicle.—Chloroform water with syrup of orange, infusion with syrup, compound decoction of sarsaparilla and syrup, liquorice powder and water to make a mass. The powder in

Incompatibles.—Decoction of liquorice, subnitrate of bismuth, starchy preparations.

Dose of Potassii Iodidum, 2 to 10 grains.

Linimentum Potassii Iodidi c Saponē.

Unguentum Potassii Iodidi.

OLEUM SANTALINI FLAVÆYellow Sandal-Wood Oil*

It is obtained from the wood of *Santalinum Citrinum* and other species of the same genus (Nat. Ord. *Santalaceæ*). In India sandal-wood is esteemed for its sedative and febrifuge properties. It is a stimulant to the mucous membranes. It is useful in gonorrhœa and leucorrhœa.

Vehicle.—An emulsion in cinnamon or peppermint water, with syrup of orange.

Dose.—10 to 30 minims.

- 1 ℞ Sulph. Præcipitati, gr. xxx.
 Ol. Santal. Flav. ℥ij.

PYRETHRI RADIX. *Pellitory Root*

The root of *Anacyclus Pyrethrum* (Nat. Ord. *Compositæ*), a native of Spain and other countries, has no smell, but is very acrid when chewed, and contains a principle called *Pyrethrin*. It is powerfully irritant. It has been given in paralysis and intermittents, but is chiefly employed as a masticatory to promote the flow of saliva. It is used in the form of lotions to chilblains; to parts affected with rheumatic pains; to relaxed throat; and in aphonia.

Tinctura Pyrethri is intended for external use.

- 1 ℞ Pyrethri rad.
 Mastiche, ana ʒj.

Fiant, lege artis, ad ignem masticatoria duo; et uno vel altero manducato, exspuat salivam.

To be Applied upon Cotton in a Case of Toothache.

Mr BRADLE

*PYRETHRUM ROSEUM

The powder of the flower-heads form the so-called "Insect Powder." It drives away fleas and other insects.

PYROXYLIN. *Gun Cotton*

Pyroxylin is employed in the preparations of Collodium and Collodium Flexile.

QUASSIÆ LIGNUM. *Quassia Wood*

The wood of *Picræna Excelsa*, a West Indian tree (Nat. Ord. *Simarubaceæ*), is a bitter tonic, febrifuge, stomachic, and anthelmintic. Like Calumba and Canella, it contains no Tannin, and may thus be prescribed with Salts of Iron. It acts on animals as a narcotic; and its prolonged use, it is said, will bring on dimness of sight in man. It is given in dyspepsia, loss of appetite and strength, and in debility after fevers or any other cause. Its infusion is frequently resorted to as a convenient vehicle for the preparations of mercury, iron, and iodide of potassium. It is seldom given in substance.

Vehicle.—Infusion of orange with syrup.

Dose of Extractum Quassiæ, ʒ to 5 grains.

Infusum ———, 1 to 2 ounces.

Tinctura ———, ʒ to 2 drachms.

*Tinct. Quassiæ comp., 1 to 2 drachms.

- 1 ℞. Inf. Quassiæ, ʒvj.

 Glycerini, ʒx.
 Inf. Quassiae ad ʒss. M. ft. haust.

To be taken three times a day after food.

A Tonic.—*

QUERCUS CORTEX. *Oak Bark*

The dried bark of the small branches and young stems of *Quercus Pedunculata*, the common oak (Nat. Ord. *Coryæ*), contains tannic acid, and is therefore astringent in properties. The decoction may be used both internally externally in hæmorrhages, fluxes, and all cases where astringent is desirable. The powder and extract have a given in intermittents.

Vehicle.—The Decoction flavoured with chloroform or syrup of ginger.
compatibles.—For the Decoction; mineral acids, metallic salts.

Uses of Pulvis Quercus, ʒ to 2 drachms.

Decoctum —, 1 to 2 ounces.

*Extractum —, 10 to 30 grains.

 Zinci Sulph. ʒj. Fiat lotio.
In Uterine Cauliflower Excrescences.—Sir C. CLARK.

*QUILLAYA SAPONARIA

The inner bark of *Quillaya Saponaria* (Nat. Ord. *Rosaceæ*) contains a large quantity of Saponin. In some parts of America it is employed as a substitute for soap. It is used as a detergent in scurf or baldness of the head.

QUININÆ SULPHAS. *Sulphate of Quinine*

The sulphate of an alkaloid prepared from the bark of *Cinchona Flava*, *Cinchona Lancifolia*, &c. It is tonic, antiperiodic, and anthelmintic. It is given in simple debility; atonic dyspepsia; in intermittent, remittent malarial, bilious remittent or yellow, typhus, puerperal, and scarlet fever; influenza, phthisis, advanced pneumonia and pleurisy; periodical or remittent diseases; neuralgias of malarial origin; acute rheumatism; enlarged spleen; erysipelas; erythema nodosum; urticaria; scrofulous ophthalmia; puerperal insanity; delirium tremens; headaches associated with hysteria and anæmia; laryngismus stridulus; epilepsy; chorea; gangrene and mortification; cancrum oris; aphthous ulcerations; scurvy; pyæmia; malarial dysentery; diarrhœa; cholera infantum; and as an anthelmintic in *ascarides lumbricoides*. *Externally*, it is used for subcutaneous injection.

The Valerianate of Quinia has been recommended as an antiperiodic. The Arsenite combines the antiperiodic action of arsenious acid with that of quinine. The Citrate of Quinine and Iron may be given in debility when attended with anæmia, or in facial neuralgia.

Quinidia is an alkaloid found in some kinds of bark. It

which resembles quinia. It may be prescribed and used as quinine.

inchonise Sulphas and Quinidise Sulphas are prescribed in the same manner as common quinine.

Solubility.—Of Quinise Sulphas; 1 drop of dilute sulphuric acid to each greatly increases its solubility; 1 in 5 of aromatic spirit of ammonia; 16 of ammoniated tincture of valerian; 1 in 40 of glycerine; 1 in 80 of stiffed spirit; 1 in 740 of water. Of Quinise Sulphas (neutral) 1 in 13 of water. Of Quinise Hydrochloras, 1 in 24 of water.

Compatibles.—Alkalies and their carbonates. Astringent infusions.

Vehicle.—The Powders in sweetened milk or in wafer capsules. In Pill with glycerine and tragacanth or solution of tartaric acid. In Mixture: with or without a sufficiency of acid to form a solution (12 minims of dil. sulph. dil. to 8 grains), and with syrup of orange-peel, syrup of n, simple syrup, and tincture of fresh orange-peel; chloroform water with or without acid and with tincture of fresh orange-peel; infusion of n made with nitric acid instead of sulphuric acid; milk, which not only disguises the taste, but also dissolves quinine; a solution of quinine in glycerine, and each dose well diluted with milk at the time of taking for children. Warburg's tincture, a combination of quinine and a number of astringents.

Subcutaneous Injections.—A solution of the disulphate (P. B.) in ether. Infusion of the neutral sulphate in water. (Dose, 1 grain in 13 minims.) A solution of the hydrochlorate in water.

Rectal Injections.—When the stomach will not retain this medicine, it may be administered in the form of enema (5 to 10 grains in mucilage of starch).

Topical Application.—Should the form of enema be impracticable, an equal quantity of quinine and arrowroot or starch powder may be sprinkled over a blistered surface denuded of the cuticle.

Liniment.—A saturated alcoholic solution incorporated with lard. In combination with oleic acid (pure oleic acid will dissolve one fourth of eight, and this solution may be used, diluted or not, as a liniment).

Vapor Solution.—The neutral sulphate dissolved in water (2 to 4 grains in an ounce). Half an ounce to be applied to the respiratory passage by means of an atomiser.

Dose of Quinise Sulphas, 1 to 10 grains.

Pilula Quinise, 2 to 10 grains.

Tinctura —, 1 to 2 drachms.

Tinctura — Ammoniat, 1 to 2 drachms.

Vinum —, 1 to 1 ounce.

Ferri et Quinise Citrat, 5 to 10 grains.

* *Quinise Arsenias, gr. 1/10.*

* — *Carbolas, 2 grains.*

* — *Citras, 1 to 10 grains.*

* — *Effervescens, 1 to 2 drachms.*

* — *Ferrocyanas (Paris Codex), 1 to 5 grains.*

* — *Lactas, 3 to 9 grains.*

* — *Murias, 1 to 2 grains.*

* — *Salicylas, 2 to 10 grains.*

Dose of *Quinise Sulphas, Neutral, 1 to 10 grains.

*—— Tannas, 1 to 5 grains.

*—— Valerianas, 1 to 3 grains.

*Syrupus Quinise Dikinatis, $\frac{1}{4}$ to 1 drachm.

RESINA. *Resin*

This is the hard, yellow, semitransparent residuum left after the distillation of the volatile oil from common turpentine. Melted and shaken with water, it becomes white resin. Resin unites with alkalies to form soluble soaps. It is never given internally. It is employed as a stimulant ingredient in plasters, cerates, and ointments, giving also substance to them when required to protect a part. The preparations are *Unguentum Resinæ*; and *Emplastrum Resinæ*, known as adhesive or sticking plaster.

RHAMNI SUCCUS. *Buckthorn Juice*

The recently expressed juice of the ripe berries of the Purgive Buckthorn, *Rhamnus Catharticus* (Nat. Ord. *Rhamnaceæ*). It is a powerful cathartic, and rather too potent and irritating for general use. It is chiefly administered in dropsy.

- Dose* of the *Fresh Berries, 30 to 40 grains.
 *Expressed Juice, ʒ to 1 ounce.
 Syrupus Rhamni, 1 drachm.

- 1 ℞ Syr. Rhamni, ʒss.
 Tinct. Sennæ,
 Tinct. Rhei, ana ʒj.
 Aquæ Anethi, ʒvj. Misce: fiat haustus purgans.

***RHAMNUS FRANGULA.** *The Black Alder*

The dried bark of *Rhamnus Frangula* (Nat. Ord. *Rham-*
nales). It is alterative and purgative. It is useful in
 scurvy, secondary syphilis, and various cutaneous
 eruptions. It is esteemed also as a valuable purgative for
 delicate constitutions and the aged. A greenish or greenish-
 yellow dye is made from the leaves. The wood, under the
 name of "Dog-wood," is used in the manufacture of fine
 powder.

Dose.—With syrup and water

of *Extractum Rhamni Frangulae Liquidum*, 3 to 4 drachms.
Decoctum ———, 1 to 2 ounces.

RHATANIA. *See KRAMERIA.*

RHEI RADIX. *Rhubarb Root*

The dried root, deprived of its bark, of various unascer-
 tained species of *Rheum* (Nat. Ord. *Polygonaceae*) imported
 from China. It is yellow and mottled in appearance;
 friable and gritty when masticated. It contains a colour-
 ing principle, Chrysophanic acid. It is a mild purgative,
 distinguished by its astringent and tonic properties.
 It opens the bowels, but its secondary effect is to con-
 strict them. It is thus well fitted for use in diarrhoea, but it is
 inappropriate in constipation, where a continuous aperient
 action is desired. It is non-irritant, an adjuvant to other
 cathartics, and a good purge for infants. It may be given
 in the form of dinner-pills in atonic dyspepsia.

Dose.—The Powdered Root in aniseed or peppermint water with syrup
 of ginger. The freshly prepared Infusion. To counteract the griping effects,
 such as ginger, coriander, nutmeg or cinnamon, may be infused with
 rhubarb root, and the whole sweetened. The Powdered Root in pill
 form or with syrup of ginger as an excipient. The Compound Powder
 of Rhubarb.

Dose of Pulvis Rhei, 1 to 5 grs. as a stomachic; 10 to 20 grs. as a purge.

Extractum Rhei, 5 to 15 grains.

Infusum ———, 1 to 2 ounces.

Pilula ——— comp. 5 to 10 grains.

Pulvis ——— comp. 20 to 60 grains.

Syrupus Rhei, 1 to 4 drachms.

Tinctura —, 1 to 2 drachms as a stomachic;
as a purgative.

Vinum —, 1 to 2 drachms.

RICINI OLEUM. *Castor Oil*

a oil expressed from the seeds of Ricinus Communis
Ord. *Euphorbiaceæ*), imported from India. It is of
ale straw colour, has a faint odour and taste, and
rs from all other fixed oils in being soluble in all pro-
ions in absolute alcohol. It is a mild laxative cathartic,
om griping, and safe in operation, and is admirably
ted for an aperient in irritable conditions of the sys-
; for weak persons, and women after their confinement;
inflammatory diseases; and in obstruction of the bowels.

It is well fitted for children. When given as aperient constipation, its dose may be gradually lessened. *Externally*, the decoction of the leaves of the castor-oil plant, topically applied to the breast, is said to be an efficient galactagogue.

Vehicle.—Floating in warm coffee, or peppermint water, or cream emulsion with yolk of egg and flavoured with compound tinct lavender. In emulsion with acacia and aromatic water, with a chloride or phosphate of sodium to mitigate the after taste.

Dose, $\frac{1}{2}$ to 2 ounces.

Sp. Rosmarini, ʒss.

Use: fiat embrocatio, cum panno lanco partibus dolentibus applicanda.

In Neuralgia and Muscular Pains.—DR NELIGAN.

SABINÆ CUCUMINA. *Savin Tops*

The fresh and dried tops of the *Juniperus Sabina*, a genous shrub (Nat. Ord. *Conifera*), are possessed of useful medicinal properties. They have an acrid taste, unpleasant odour, and owe their activity to a volatile which may be separated by distillation. Both Savine and its Oil are powerfully stimulant and irritant to the renal surface. Ointment and Cerate of Savine are thus employed for the purpose of keeping open blisters, when it is thought desirable to keep up the local irritation, and note the discharge of serum. Given internally, in small doses, with care, it proves cathartic, emmenagogue, and stimulant to the uterus. It should not be administered when there is any irritation of that organ. In large doses, it is highly dangerous, acting as an irritant on the system. It has been given by criminals to procure abortion, and with fatal consequences.

Recipe.—The Oil emulsified by powdered acacia, and aromatic water added.

Indications.—Emetics, castor oil, linseed poultices to the abdomen, opiate pills.

Use of Pulvis Sabinæ, 5 to 10 grains.

Oleum ———, 1 to 5 minims.

Tinctura ———, 15 to 30 minims.

Unguentum Sabinæ, to keep up suppuration.

To be dusted over the part affected.
In Eczema, Herpes, and Simple Excoriations.—Mr ACTON.

SACCHARUM LACTIS. *Sugar of Milk.*

Sugar of Milk is the crystallised sugar obtained from the whey of cows' milk by evaporation. It is nutritive and laxative, and is given, as an article of diet, in pulmonary affections, in irritable stomach following hæmorrhage, and to infants as a substitute, in a diluted form, for the milk of the mother. It is used for rubbing up powerful medicinal powders, as corrosive sublimate, arsenic.

Solubility.—1 in 3 of boiling water, 1 in 5 of cold water.

Vehicle.—Water.

Dose.—60 to 120 grains.

SACCHARUM PURIFICATUM

The crystallised refined juice of the stem of *Saccharum Officinarum* (Nat. Ord. *Graminaceæ*), is demulcent and slightly laxative. It is given in catarrhal affections in the form of candy, syrup, &c.; and is used chiefly as a vehicle or adjunct to other medicines, and to render oils miscible with water. The Syrup is the only official preparation.

Dose.—Ad libitum.

***SAGAPENUM.**

This is one of the fetid gum-resins, derived from some known species of the Nat. Ord. *Umbelliferae*. It has an unpleasant odour and taste, and contains an ill-smelling tile oil. It is stimulant and antispasmodic. Though little used, it has been given as an emmenagogue, and as antispasmodic in hysteria and epilepsy.

ss.—From 10 to 30 grains.

***SALEP. Salep**

The prepared tubers of *Orchis Masculula* and other species of the same genus (Nat. Ord. *Orchideae*), cultivated in India and Persia. They contain starch, mucilage, and many matters, and are considered very nutritious. Boiled in water or milk they yield an agreeable drink for infants, and may be employed as a vehicle for medicines of various kinds.

A tablespoonful every two hours.

In Cholera Asiatica.—Dr MELVIN RHODE (Vienna).

***SALICIS CORTEX ET SALICINA. Willow-bark
and Salicin**

The bark of several of the native species of willow (Nat. d. *Salicaceae*) has been used in medicine. It contains

some Tannic Acid, and a peculiar principle, called *Salicin*. Its taste is bitter and astringent. It is tonic and astringent, and has been used, in cases of debility and intermittents, as a substitute for Cinchona bark. The *Salicin* prepared from it has likewise been used in nearly all the cases in which quinine is so serviceable. But it is doubtful whether it can be so safely relied upon. *Unguentum Salicis* (Hufeland) is recommended as a mild dressing to foul ulcers.

Solubility.—*Salicin*, 1 in 28 of water.

Vehicle.—In decoction with syrup of orange-peel. *Salicin* in water or infusion of orange-peel with syrup.

Dose of *Pulvis Salicis Corticis*, $\frac{1}{4}$ to 1 drachm.

Infusum — (bark 1 oz., water 1 pint), 1 to 3 ounces.

Salicinum, 5 to 10 grains.

Pulvis Salicini Effervescens, 1 drachm.

***SALVIA. Sage**

The common sage, *Salvia Officinalis* (Nat. Ord. *Labiatae*), native of South Europe. The leaves have a warm, bitter, astringent taste, with an agreeable aromatic odour. It is slightly stimulant, astringent, and tonic. It is used in dyspepsia, and is said to abate the sweating in hectic fever. *Infusio*.—The Infusion (1 oz. to 1 pint) as a gargle, with honey and alum. *Unguentum*. The Oil as an inhalation (a teaspoonful of a mixture of oil and carbonate of magnesia to be added to hot water for each application).

Dose of Pulv. *Salviae*, 20 to 30 grains.

In Asthma.—ST MARK.

*SANGUINARIA.

This is the rhizome or root of the Canadian Blood-root, *Sanguinaria Canadensis* (Nat. Ord. *Papaveraceæ*). The powder has a faint odour and an acrid taste. In large doses, it is emetic and purgative; in small doses, stimulant, diaphoretic, and expectorant. It is said to exercise a sedative influence on the heart similar to that of digitalis. *Externally*, it is escharotic. It has been tried, in combination with chloride of zinc, as a caustic to cancerous growths, but the results have not been satisfactory. It is seldom prescribed in England. Dose of the powder, as an alterative and diaphoretic, 1 to 5 grains; as an emetic, 10 to 30 grains.

SANTONICA. *Santoninum*

The minute dried flowers and tops of *Artemisia Cina* (Nat. Ord. *Compositæ*) are the produce of Central Asia, and are known as Levant Worm Seed. They contain a volatile oil, and a crystalline neutral principle called Santonin. To one or both of these Santonica owes its anthelmintic power. It is chiefly prescribed for ascarides and lumbrici in children. It frequently affects the sight, causing all objects to appear a yellow, blue, or green colour. It must be given with, or followed by, a brisk purgative.

Solubility.—Of Santonin, 1 in 5 of chloroform, 1 in 50 of cold alcohol, 1 in 5000 of cold water.

Vehicle.—Wafer or gelatine capsule. In an emulsion of castor oil.

Dose of Santonica, 10 to 60 grains.

SAPO ANIMALIS

Hard Soap is a Soda Soap, made with purified animal fat, consisting principally of Stearine.

SAPO DURIS ET MOLLIS. *Hard and Soft Soap*

Hard Soap should be made of olive oil and soda. Castile Soap is very pure, but Common Soap contains resin, tallow, and other such materials. Soft Soap (*Sapo mollis*) should be made of olive oil and potash, but it frequently contains train oil and many impurities. Soap is a kind of salt formed with the alkali by stearic, oleic, margaric, and other acids contained in fats. It is soluble in pure water. It acts upon the system much in the same way as the carbonates of the alkalies, being antacid and alterative. Soap has been given in large quantities to dissolve lithic acid calculi in the bladder. It is a frequent ingredient in pills, and renders the resinous parts of purgative medicines more soluble in the stomach juices. Compound Soap pill is merely a vehicle for opium, of which it contains one grain in every six. Soap is used externally as a detergent in many cutaneous diseases, and gives lubricity to liniments and embrocations, being at the same time slightly rubefacient. It is also a common ingredient in cerates and plasters. For most of these purposes Hard Soap is used. The Compound Sulphur ointment, as also many forms for pills, contain Soft Soap.

Dose of Hard Soap, 5 to 15 grains.

Pilula Saponis composita (1 grain of opium in 6), 3 to 6 grains.

SCAMMONIUM. *Scammony*

A gum resin obtained from the living root of *Convolvulus scammonia* (Nat. Ord. *Convolvulaceæ*), from Smyrna. It is frequently adulterated with starch, chalk, and other matters. When pure, it is a powerful drastic purgative. It is more active than jalap, and less unpleasant to the taste. It must not be given in inflammatory conditions, or in irritable states of the intestines. It is often combined with rhubarb and opium, enters into the composition of many purgative pills, and is given with calomel to children. It is useful as a cathartic in dropsies, and as a vermifuge for children.

Scammonia Radix. The dried root of *Convolvulus scammonia*, from Syria and Asia Minor, is a powerful cathartic. It causes much griping given alone, but is a valuable adjuvant to other purgative medicines when a speedy action is required.

Scammonia Resina. This resin is prepared from *Scammony Root* by a patented process. There is also a P. B. formula for it.

Preparation.—The Gum-resin, almost entirely in boiling diluted rectified spirit.

Use.—Scammony, in emulsion with milk, milk of almonds, acacia or tragacanth, is demulcent. The Resin, in pill with soap and oil of caraway or other aromatic; in powder with calomel in wafer capsule. Soap and sulphate of iron assist the action of the resin. The aromatics counteract the tendency to griping.

Dose of Scammonium, for adults, 5 to 10 gra. ; for children, 3 to 5 gr.

Confectio Scammonii, 10 to 30 grains.

Pilula ————— comp., 5 to 15 grains.

Scammoniz Resina, 3 to 8 grains.

Mistura Scammonii, as formula, half for a child. } from dried

 In Constipation of Children.

SCILLA. *Squill*

The bulb of *Urginea Scilla* (Nat. Ord. *Liliaceæ*), a plant growing on the sea-coast of the Mediterranean. Sliced and dried it forms semitransparent slips, which have a bitter taste. In small doses, it is expectorant and diuretic; in large doses, emetic and purgative. It contains an acrid principle, and in very large doses may prove poisonous. It is given as a diuretic in dropsies, generally in combination with other medicines, but is chiefly used as an expectorant in chronic bronchitis, when there is not much fever, and is often conjoined with *Ipecacuanha*, *Paregoric*, and other remedies. It is rarely given as an emetic.

Vehicle.—The Tincture or Vinegar in oxymel diluted with aniseed water, decoction of barley, liquorice, or senega. The Powder in pill with glycerine of tragacanth.

Owing to its affinity for moisture, it should not be prescribed in the form of powder.

- Dose* of Pulvis Scillæ, 1 to 3 grains.
 Pilula ———, composita, 5 to 10 grains.

SENNA.

The same is applied to the dried leaves of several species (Nat. Ord. *Leguminosæ*). The Alexandrian Senna (Senna Alexandrina) consists of the leaves of *C. Acutifolia* (Egypt, the Tinnivelly Senna (*Senna Indica*) of the East, *C. Angustifolia* from Southern India. Senna is commonly employed of all cathartics. It is sure ; rather heating in its operation ; less irritant than most cathartics, but frequently causes nausea and

It is inappropriate when there is much fever ; avoided in pregnancy, and in irritable states of the system. It is in general quite safe in children and old persons, and useful in all cases in which we desire to move the bowels by a tolerably active purge. It is combined with some saline cathartic, as the Compound Liquorice Powder or that of the German Pharmacopœia, which is generally preferred. A little Carbonate of Soda or Compound Spirit of Ammonia increases the effect of Senna.

—The Confection. The Infusion, Syrup and Tincture together.

SERPENTARIÆ RADIX. *Serpentary Root*

The dried rhizome of *Aristolochia Serpentaria*, growing in North America (Nat. Ord. *Aristolochiaceæ*), occurs in slender fibres with a knotted head, and has a camphorous taste. Serpentary is an aromatic tonic and diaphoretic; in large doses, a laxative and nauseant. It was once much esteemed as an antiperiodic in agues. It is given in combination with various stimulants and diaphoretics, in typhoid and other fevers, dyspepsia, and chronic rheumatism.

Vehicle.—The Infusion and Tincture with syrup.

Dose of Pulv. Serpentariæ, 10 to 15 grains.

Infusum ———, 1 to 2 ounces.

Tinctura ———, $\frac{1}{2}$ to 2 drachms.

A Stimulant.

SODA CAUSTICA. *Caustic Soda*

Hard greyish-white fragments, alkaline and corrosive. It is prepared in the same way as caustic potash, from the carbonate. It may be used in the same way, but is milder in its action.

Liquor Sodæ is chiefly employed in pharmacy, but may be used as an antacid, being less irritant than potash.

Solubility.—1 in 2 of water.

Vehicle.—Decoction of barley, decoction of liquorice with mucilage.

Antidote.—Vinegar, lemon-juice, citric acid, demulcents.

Dose of Liquor Sodæ, 30 to 60 minims.

- 1 ℞ Liq. Sodæ, ℥xxx.
 Ammon. Carb. gr. v.
 Inf. Quassiae, ʒiss.

Misce: fiat haustus, ter die sum.

In Dyspepsia with Acidity.

ODA TARTARATA. *Tartarated Soda. Rochelle Salt*

It is prepared by adding cream of tartar to a solution of carbonate of soda. It is a mild and cooling purgative; in all doses, a diuretic. It is generally combined with infusion senna, as it may cause some griping if given alone; or may be given as a Seidlitz powder—i. e. in effervescence, with some tartaric acid and bicarbonate of soda. In either of these forms, it is an antiphlogistic cathartic, less irritating than the sulphates of soda and magnesia, and well adapted for use in inflammatory complaints, and for children and delicate persons. It acts upon the urine as an alkali.

**Pulveres Effervescentes Aperientes*, Seidlitz powders, one containing Rochelle salt, and bicarbonate of soda; and the other, tartaric acid. The two powders are mixed in water and taken during effervescence.

Solubility.—1 in $2\frac{1}{2}$ of water.

Vehicle.—Lemonade, ginger-beer, peppermint water, with syrup of sugar.

Dose, as a diuretic, 30 to 60 grains; as a cathartic, 2 to 4 drachms.

SODA CARBONAS. *Carbonate of Soda*

An impure carbonate of soda is known under the names of *Kelp* and *Burda*, the former obtained by burning seaweed in Scotland, the other by the combustion of land plants growing on the sea-shore of the Mediterranean. It is also manufactured in large quantities from common salt. Its crystals tend to effloresce in the air. It is an antacid and anæsthetic, and used in dyspepsia, heartburn, flatulence, gout, and rheumatic affections, and cases of lithic deposit in the urine. Though in large doses an irritant poison, it is less corrosive than the same salt of potash. It is diuretic and diaphoretic. It is given as an antiphlogistic in coughs and mild inflammations. *Externally*, in the form of a bath, it is employed to cleanse the skin in cutaneous diseases instead of soap.

Solubility.—1 in 3 of water, 1 in 1½ of glycerine.

Feels.—Bitter infusion. The Efflorescence in pill with soap and aromatic.

Dose of Soda Carbonas, 5 to 30 grains.

Efflorescence, 5 to 10 grains.

Preparation.—Alkalium (carbonate 8 to 10 ounces, water 8 gallons), used in skin diseases.

SODÆ CHLORATÆ LIQUOR

Solution of Chlorinated Soda

A colourless solution of free hypochlorous acid of sodium, and bicarbonate of soda. It is antiseptic, resolvent, disinfectant. It is useful in fever, epidemic dysentery, malignant scarlatina, dy glandular enlargements, chronic affections of the membranes. *Externally*, as lotion, gargle or cat it is applied in all diseases accompanied with fetor a powerful disinfectant. It is a better disinfect deodoriser than chloride of lime for sick rooms clothes, &c., of patients. One part is to be mixed or 40 of water.

Vehicle.—Water.

Incompatibles.—Almost all organic substances when mixed with chlorinated bodies cause a rapid disappearance of their chlorine.

Dose of Sodæ Chloratæ Liquor, 10 to 20 minims.

SODÆ CITRO-TARTRAS EFFERVESCENS

Effervescing Citro-Tartrate of Soda

Sodæ Citro-tartras Effervescens, commonly called "Citrate of Magnesia," is a granular preparation of bicarbonate of soda with citric and tartaric acids. With water it forms an agreeable effervescing purgative. Dose, 1 to 2 drachms. The neutral Citrate and Tartrate of Soda are formed when an effervescing draught is made of either of the carbonates with citric or tartaric acid. Such a draught is an agreeable refrigerant and diaphoretic, and may be prescribed in the same instances as one containing potash. The following proportions must be observed in prescribing:

One scruple of carbonate of soda will require to neutralize it, 10 grains of crystallised citric or tartaric acid, or 2½ drachms of lemon-juice.

One scruple of bicarbonate of soda will require 17 grains of citric acid, 18 of tartaric acid, or 4½ drachms of lemon-juice.

(Dissolve each powder separately, mix the solutions in a tumbler, and drink while effervescing.)

Dr A. T. THOMSON.

SODÆ EFFERVESCENS LIQUOR. *Soda Water*

Each half pint bottle should contain 15 grains of bicarbonate of soda.

SODÆ HYPOPHOSPHIS. *Hypophosphite of Soda*

A white, granular, deliquescent salt of a bitter nauseous taste. It is a nervine tonic and powerful hæmatinic, and possesses all the properties of Phosphorus. It is given in phthisis, chronic bronchitis, nervous depression, chorea, neuralgia, remittent fever of childhood, tabes mesenterica, debility from lactation.

Solubility.—1 in 1 of water, 1 in 2 of glycerine.

Vehicle.—Milk. Decoction of liquorice root. Bitter infusions. Symp. It is well to prescribe it in combination with bicarbonate of soda.

Dose.—5 to 10 grains.

Dr THOROWGOOD.

SODÆ NITRAS. *Nitrate of Soda*

A native salt, purified by crystallisation from water. It is only used to prepare Sodæ Arsenias. It may be given as a diuretic.

Solubility.—1 in 3 of water.

Vehicle.—In effervescing mixture.

Dose.—10 to 30 grains.

SODÆ ET POTASSÆ TARTRAS, *see* SODA TARTARATA.

SODÆ PHOSPHAS. *Phosphate of Soda*

It is made by adding a solution of carbonate of soda to one of the superphosphate of lime obtained from bone earth. It occurs in large crystals, and its solution browns turmeric paper. This salt is an exceedingly mild saline cathartic, and, having very little taste, is less disagreeable than some others. It may be given in fevers and inflammations, even in inflammations of the bowels, and in disorders of pregnant women. It is one of the solvents for lactic acid. It is useful in gouty and rheumatic disorders, especially the former; all cases where there is a tendency to a

ic deposit in the urine, the visceral affections of child-
d, and in diabetes.

solubility.—1 in 6 of water.

Use.—Weak broth. Gruel.

æ.—4 to 8 drachms.

SODÆ SULPHAS ET *BISULPHAS

The Sulphate and the Bisulphate of Soda

The Sulphate, or Glauber's Salt, may be obtained from the residue left in the manufacture of hydrochloric acid. It occurs in long prismatic crystals, has a bitter taste, is very soluble in water. It acts as a cathartic in the same manner as sulphate of magnesia, but is rather more potent. It may be used in much the same cases, but a larger quantity is required.

The *Bisulphate is also a cooling purgative. It is the same salt of Potash.

Solubility.—Of the Sulphate, 1 in 3 of water.

Vehicle.—Of the Sulphate: lemonade, infusion of roast sweetened; water with a few drops of sulphuric acid.

Dose of Sodæ Sulphas, 4 to 8 drachms.

*Sodæ Bisulphas, 1 to 6 drachms.

*SODÆ SULPHIS ET HYPOSULPHIS

Sulphite and Hyposulphite of Soda

Sulphite of Soda has been administered internally in
 of vomiting from Sarcina Ventriculi. It seems likely
 the acid juice of the stomach sets free the sulphurous
 of the salt, and that this acts by its chemical power of
 oying fungous growths, such as that which is the cause
 is disease. It may operate in the same manner when
 ed as a lotion to aphthous surfaces, where there is also
 etable growth. The Sulphite has been recommended
 e treatment of Asiatic cholera.

Hyposulphite of Soda is given in syphilitic and rheu-
 disorders; as an alterative in skin diseases; as a pur-
 e in the same manner as Sulphate of Soda; and to
 oy parasites as the Sulphite.

Solubility.—Of the Sulphite, 1 in 4 of water, 1 in 2 of glycerine; of the
 sulphite, 2 in 1½ of water, 1 in 1 of glycerine.

Use.—Of Sodæ Sulphitis, 30 to 60 grains.

Sodæ Hyposulphitis, as an alterative, 10 to 60 grains; as a
 cathartic, 2 to 4 drachms.

SODÆ VALERIANAS. *Valerianate of Soda*

Valerianic Acid is made by oxidising fusel oil, by means of chromate of potash, and sulphuric acid. It is then combined with solution of caustic soda to form this salt. It possesses both the odour and the properties of Valerianic Acid. It may be used as an antispasmodic, but it is chiefly employed in the manufacture of the other Valerianates.

Dose.—Gelatine capsule.

*SODII BROMIDUM. *Bromide of Sodium*

Occurs in white crystalline masses. It has been recommended as a remedy for seasickness, drachm doses being given three times a day a few days before embarkation.

Dose.—Infusion of orange sweetened.

Use.—10 to 60 grains.

SODII CHLORIDUM. *Chloride of Sodium*

Common salt is obtained from the waters of the ocean, and from mines on the land, and from salt springs. It is the most universal and indispensable of all condiments. Various febrile disorders, worms in the intestines, &c., have resulted from its omission as an article of diet. Its quantity in the daily food has been sometimes increased in cases of fula, phthisis, dyspepsia, and skin diseases. It acts as

a most useful alterative, and seems to p
It is said that a threatened attack of epileps
by placing a large quantity of the salt in ti
diately the "aura" is noticed.

Salt has been used, together with other as
saline injection into the veins, in Asiatic cl
partum hæmorrhage. In large doses, it acts
in still larger, it produces speedy vomiting.
it is given in cases of poisoning, and in th
cholera. *Externally*, it is used in baths
water; and applied in a strong solution as a
as a stimulant to chilblains. One, two, o
dissolved in a pint of water, form a useful
for cases of ascarides.

Solubility.—1 in 3 of water, 1 in 900 of alcohol, 80 p

Dose.—As an alterative, 30 to 60 grains; as a purgati
as an emetic, 1 to 3 ounces in warm water.

*SPIRITUS PYROXYLICUS

Medicinal Naphtha. Wood Spirit

This is obtained, together with acetic acid and tarry matters, in the dry distillation of wood. It is quite distinct from acetone, or pyroacetic spirit, obtained by distilling dry acetate of lime. Its specific gravity, when rectified, is about .818. It is a volatile inflammable liquid, with a peculiar ethereal odour. It is a diffusible stimulant, expectorant, and diaphoretic. It has been given in phthisis, chronic bronchitis, gout, rheumatism, diarrhoea, dysentery. In large doses, it is a dangerous narcotic.

Dose of the Naphtha is at first from 10 to 20 drops three times a day, gradually increasing, if nausea be not produced.

- 1 ℞ Naphthæ Medicinalis, mxx.

*SPONGIA. *Sponge*

The organised substance of certain marine animals very low in the scale of life, and found attached to rocks. It is light, porous, and elastic, and is employed to compress wounds, and to form tents, and plugs to restrain hæmorrhage. When burnt it constitutes *Spongia usta*. This contains a small proportion of iodine, and has therefore proved useful as an internal remedy in goitre and scrofula. The dose is bulky, being from 1 to 3 drachms or more. It may be made into an electuary.

℞ Spongiæ ustæ, ʒiv.

A Vermifuge.—Dr E. J. CLARK.

STRAMONII FOLIA ET SEMINA

Stramonium Leaves and Seeds

The leaves and seeds of *Datura Stramonium* (Nat. Ord. *Atropaceæ*). The seeds are the more powerful. The root also has been employed. The leaves and other parts have a rank narcotic odour, and bitter taste. The seeds are small, blackish, and acrid. It is a very powerful narcotic. It quiets the heart, lessens the number of respirations, allays pain, controls spasmodic action, and dilates the pupil. It seldom causes sleep, and does not confine the bowels. In large doses it causes delirium and death. It is especially useful in painful and irritable states of the respiratory organs. It may be given to allay cough, and diminish pain in the chest, or to stop the advance of a paroxysm of spasmodic asthma. In the latter disease it may with advantage be smoked like tobacco. Two or three pipefuls of the dry herb may be used at a time. It may be mixed with nitrate of potash and burnt, and the fumes inhaled. Fomentation or ointment of the fresh leaves

allays pain in cancer. It contains an alkaloid, Daturine, from which it derives its narcotic properties.

Vehicle.—The Extract in pill. The Tincture in chloroform water, or aromatic water, sweetened.

Incompatibles.—The caustic alkalis, mineral acids, metallic salts.

Antidote.—An emetic of sulphate of copper; afterwards opium as an antagonistic.

Dose of Stramonii Folia, 1 grain and upwards.

Stramonii Semina, $\frac{1}{4}$ to 1 grain.

Extractum Stramonii, $\frac{1}{2}$ to $\frac{1}{4}$ grain.

Tinctura ———, 10 to 30 minims.

1 ℞ Fol. Stramonii,

Fol. Salviae, 3℥ partes æquales.

(In sufficient quantity to fill a pipe, which is to be smoked by the patient, and renewed three or four times.)

STRYCHNIA. *Strychnia*

n alkaloid obtained from *Nux Vomica*. It occurs in square octahedrons or prisms, is colourless, odourless, and intensely bitter to taste. It is a very active poison. *Strychnia* acts in the same manner as *Nux Vomica*. It is given more especially in the paralysis of lead poisoning, and in epilepsy due to irregular menstruation. In form of the *Liquor Strychniæ*, combined with *Ergot*, it is a valuable aid in post-partum hæmorrhage.

Solubility.—Strychnia, 1 in 7 of chloroform, 1 in 100 of olive oil, 1 in 190 of rectified spirit.

Vehicle.—Strychnia in pill, diluted with sugar of milk and glycerine and tragacanth. The Liquor with chloroform water or compound infusion of gentian.

Antidotes.—Morphia, tincture of aconite, tobacco, chloral hydrate, chloroform.

Dose of Strychnia, gr. $\frac{1}{4}$.

Liquor Strychniæ, 5 to 10 minims.

*SUCCINUM. ACIDUM SUCCINICUM

Amber and Succinic Acid

Amber is a yellow fossil resin, and its powder is sometimes used in fumigations. By distilling it, an oil, and an acid liquid which yields on evaporation crystals, are obtained. The Oleum Succini is sometimes given internally as a stimulant, antispasmodic, and diuretic. It is chiefly used as an active rubefacient and stimulant in liniments and embrocations. It is thus employed in chronic rheumatism and paralysis. In the form known as Roche's Embrocation, it is rubbed on the chest in whooping-cough. This oil, acted on by strong nitric acid, produces Artificial Musk. It is also an ingredient in the original Eau de Luce. Succinic Acid is sometimes given internally as an antispasmodic.

Dose of Oleum Succini, 5 to 10 minims.*Tinctura* —, 10 to 20 minims.*Acidum* —, 5 to 8 grains.

Aque, ad ʒiiss.

Misce: fiat haustus, ter die sumendus.

In some forms of Epilepsy.—Dr TODD.

SUPPOSITORIA

Suppositories are solid medicines in the form of cylinders or cones for introduction into the rectum. They are employed for the exhibition of medicines when such cannot be attained by the stomach, and when a local or derivative effect is desired. They should be made up with gelatine and cerine (1 part to 4); be conical; and not weigh more than 20 grains.

The following are some of the preparations:

Iterative.—Suppositorium Hydrargyri, *Ointment*, gr. v.
odyne and Sedative.—*Suppositorium Extracti Belladonnæ, gr. ij.
Anthelmintic.—*Suppositorium Santonini, gr. v.
Antiseptic.—Suppositorium Acidi Carbolicæ c. Sapone, gr. j.
Astringent.—Suppositorium Acidi Tannici, gr. iij.
Emetic.—*Suppositorium Zinci Sulphatis, gr. x.
Emollient and Emollient.—*Suppositorium Bismuthi Oxidi, gr. x.
Purgative.—*Suppositorium Aloes, gr. v.

*SYMPHYTUM. *Common Comfrey*

The Comfrey, with yellow flowers, and found in ditches and rivers, *Symphytum Officinale* (Nat. Ord. *Boraginaceæ*), a reputed vulnerary. It is mucilaginous, glutinous, assurgent. The root, deprived of its rind and scraped, forms the most efficacious substitute for starch in the stiffening and lengthening of bandages for fractures, &c.

TABACI FOLIA. *Leaf Tobacco*

The leaves of the tobacco plant *Nicotiana Tabacum* (Nat. Ord. *Atropaceæ*), are indebted for their peculiar properties to the presence of a volatile alkaloid, Nicotia, and also of a fatty substance, Nicotianin. Tobacco, given internally, acts as a narcotic and sedative, producing sickness and depression of the action of the heart. It is poisonous in large doses, and causes death by convulsions. It is too dangerous

or combined with other substances into a confection. Tamarind whey forms an agreeable cooling drink in fevers. Dose, $\frac{1}{2}$ ounce or more.

*Tamar Indien is a French preparation in the form of lozenge. It is given in habitual constipation.

TEREBINTHINA CANADENSIS

Canada Balsam is the turpentine obtained from the stem of *Abies Balsamiae* (Nat. Ord. *Coniferae*). It is known as Balm of Gilead Fir. Its action is similar to the other Turpentine, but it is seldom prescribed internally. It is contained in *Charta Epispastica*, *Colloidium Flexile*.

Dose.—5 to 10 grains.

TEREBINTHINÆ OLEUM

Oil of Turpentine is obtained by distilling common turpentine, the resinous exudation of many trees of the Pine tribe (Nat. Ord. *Coniferae*), growing both in the Old and New Worlds. It is stimulant, diaphoretic, diuretic, purgative,

anthelmintic, and astringent. As an anthelmintic it should be prescribed in a large dose, and generally combined with castor oil, for if it fail to purge, it may produce dysuria and other unpleasant consequences, in attempting to leave the system by means of the kidneys. As a purgative, it is highly useful in cases of tympanitic distension of the abdomen, and is employed in the acute stage of puerperal fever. In small doses, it is given in dropsy and suppression of urine, to act as a diuretic; as a stimulant to the nervous system in neuralgia and epilepsy; as an astringent in various cases of internal bleeding, and to check the mucous discharge in gonorrhœa and leucorrhœa. *Externally*, it is a rubefacient; and is used in the forms of fomentation, liniment, and enema. It may be applied in erysipelas.

Solubility.—1 in 10 of rectified spirit.

Vehicle.—In water suspended by powdered acacia and flavoured with oil of lemon, and sweetened. In milk of almonds suspended by yolk of egg; oil of nutmeg or cinnamon may be added.

Dose of Oil of Turpentine, as a stimulant and diuretic, 10 to 30 minims as a cathartic or vermifuge, 3 to 4 drachms, generally combined with castor oil. It may be given suspended in mucilage, or with yolk of egg.

Confectio Terebinthinæ, 1 to 8 drachms; as an anthelmintic, 3 to 4 ounces.

Linimentum Terebinthinæ is applied in lint to burnt and scalded surfaces.

Linimentum Terebinthinæ Aceticum and Unguentum Terebinthinæ are powerful rubefacients.

Enema Terebinthinæ is an efficient antispasmodic in cases of tympanitis, and also as a vermifuge.

 Vitelli Ovi unius.
 Inf. Lini, ʒx.
 Ol. Napi sylv. ʒj. Misce: fiat enema.

In Colic and Obstinate Constipation.—NOSOCOM. EDIN.

*THEA. Tea

The best teas, both black and green, are derived from Thea Bohea and Thea Viridis (Nat. Ord. *Camelliaceæ*), plants of Northern China. Besides its use as a daily beverage, infusion of tea may be employed as a pleasant vehicle for many other medicines. Containing some tannin, it has been occasionally used for its mild astringent properties.

- 1 ℞ Inf. Theæ viridis, ʒvj.
 Liq. Plumbi Subacet. ℥xij.
 Misce: fiat injectio.

In Gonorrhœa.—DR THOMAS.

THEOBROMÆ OLEUM

Cocoa Butter is a concrete oil obtained by expression and heat from the ground seeds of Theobroma Cacao (Nat. Ord. *Byttneriaceæ*). It is employed in suppositories.

THERIACA

Treacle is the uncrystallised residue of the refining of sugar. It is demulcent, nutrient, and slightly laxative. It is chiefly employed as an excipient for pills.

***THYMOL**

colourless, transparent, crystalline substance, of an aromatic odour, obtained from Oil of Thyme. It is antiseptic, astringent, deodorant, stimulant; in strong solution, it is caustic. It is useful in sick rooms, lying-in wards; as a gargle or injection in mucous discharges, foetid ulcers, and burns, &c.

Dose.—1 in 1000 of water, 1 in 190 of glycerine, 1 in 3 of olive oil, rectified spirit.

R. Thymol, ʒj.

used as a wash every morning, and followed by an application of iodine and perchloride of mercury.

In Ringworm.—Mr MALCOLM MORRIS.

TORMENTILLA. *Tormentil

root of *Potentilla Tormentilla* (Nat. Ord. *Rosaceæ*), a native plant, contains about 18 per cent. of tannic acid. It is given internally as an astringent tonic, and in hemorrhages and fluxes from the bladder and bowels. Externally, it is well adapted for astringent lotions, injections, and gargles.

f Pulv. Tormentillæ, $\frac{1}{2}$ to 1 drachm.
Decoctum ———, 1 to 2 ounces.

- 1 ℞ Rad. Tormentillæ, ʒj.
 Aquæ, ʒxij. Decoque ad uncias octo, cola, et adde
 Aluminis, ʒj.
 Mellis, ʒj. Misco: fiat gargarisma.
 In Relaxed Throat.—RADIUS.

*TOXICODENDRON. *Poison Oak*

The leaves of the *Rhus Toxicodendron*, an American plant (Nat. Ord. *Anacardiaceæ*), have no odour, but possess a disagreeable acrid taste, and are very poisonous in large doses. *Toxicodendron* rouses the nervous centres in the same manner as *Strychnia*, and is chiefly used in cases of local paralysis, whether of sensation or motion. It may sometimes restore the lost power in the affected part. It has also been given in obstinate skin diseases and in chronic rheumatism.

Dose of Pulvis Toxicodendri, 1 to 8 grains.
 Extractum ——— (Paris Cod.), 1 grain, gradually increased.
 Tinctura ——— (Neligan), half a drachm to a drachm.

- 1 ℞ Ext. Toxicodendri,
 Camphoræ, ana gr. xv.
 Ext. Arnicæ,
 Ext. Valerianæ, ana ʒss.

 For Acute Pains in Chronic Paralysis.—DR NELIGAN.

TRAGACANTHA

A gummy exudation from the stem of *Astragalus Vera* (Nat. Ord. *Leguminosæ*), growing in Asia Minor. It is inodorous, and has a bland taste. It is used as a demulcent in coughs diarrhoea, &c., and employed for the formation of a mucilage by means of which insoluble powders may be suspended in water. It is also employed to make lozenges and pastes.

*Glycerine of Tragacanth is the best excipient for many pills.

Dose of Pulvis Tragacanthæ, 20 grains upwards.

Mucilago ———, 1 ounce upwards.

Pulvis ——— compositus, 20 to 60 grains.

- 1 ℞. Pulv. Tragacanthæ, gr. xv.
 Sacchari albi, gr. xij. Terre, et paulatim adde
 Mist. Amygd. dulc. ℥ij.
 Aquæ Camphoræ, ℥iiss:
 Syr. Althææ, ℥ss.

Misce: fiat mistura demulcens.

Dr COPLAND.

*TRIFOLIUM

Clover (Nat. Ord. *Leguminosæ*) has been reputed a remedy in whooping-cough. It is conveniently exhibited in the form of syrup.

Dose of the Syrup, 1 drachm.

*TRITICUM REPENS

Creeping Couch Grass, a common weed of the fields, is alterative and diuretic. It is given in irritable bladder.

Dose of Decoctum Tritici (root 1 oz., water a pint), 4 to 8 ounces.

*TUSSILAGO. *Coltsfoot*

The whole herb of Tussilago Farfara, the Coltsfoot, a common English plant (Nat. Ord. *Compositæ*), abounds in mucilaginous matter. It is also slightly bitter and tonic. It is chiefly used in coughs, in the form of decoction, paste, or lozenge.

Dose of Decoctum Tussilaginis, 1 to 3 ounces.

- 1 ℞. Decoct. Tussilaginis,
 Mist. Amygd. ana ℥ij.
 Syr. Hemidesmi, ℥j.

Misce: fiat mistura, de qua cap. cochl. ij ampla horis intermediis.

In Chronic Bronchitis.—Dr. NELIGAN.

ULMI CORTEX. *Elm Bark.*

The inner bark of the common Elm, *Ulmus Campestris* (Nat. Ord. *Ulmaceæ*), is astringent, demulcent, diuretic,

and a bitter tonic. It is given in chronic rashes and other cutaneous affections.

Incompatibles.—Sulphate of iron, acetate of lead.

Dose of Decoctum Ulmi, 2 to 4 ounces.

- 1 Cort. ulmi, ʒiss.
Sem. Carui cont. ʒss.
Aquæ, Oiss. Coque ad octarium.

An Alterative Drink.—Sir E. WILMOT.

*UREA

This is a soluble crystalline substance, obtained from the urine of man and animals. It has been much employed as a diuretic by certain French and continental practitioners, and is said to increase the secretion of urine in dropsy and anasarca disorders, without producing any disturbance of the animal economy. *Nitrate of Urea* has been recommended as a diuretic in anasarca. Urea, artificially made, is now an article of commerce.

Solubility.—Readily in water.

Vehicle.—An aqueous solution with syrup.

Dose of Urea, 10 to 60 grains.

Urea Nitras, 1 to 1½ grains.

- 1 ℞ Urea, gr. xxxvj.
Syr. Aurantii, ʒss.

Conf. Rosæ, q. s. ut fiat pilula, ter die sumenda.

In Anasarca, &c.—Dr. KINGDOM.

UVÆ URSI FOLIA. *Bearberry Leaves*

The dried leaves of *Arctostaphylos Uva-Ursi* (Nat. Ord. *Ericaceæ*) are astringent and tonic. *Uva Ursi* exerts a specific influence on the kidneys. It is given in diabetes, menorrhagia, chronic dysentery; but is chiefly prescribed in

the latter stage of chronic inflammation of the bladder. It is sometimes given in cases of irritation from the presence of a stone in the bladder.

Vehicle.—The Infusion sweetened.

Dose of Pulvis Uvæ Ursi, 20 to 60 grains.

Infusum —, 1 to 2 ounces.

***Extractum** —, 5 to 10 grains.

- 1 ℞. Pulv. Uvæ Urai,

Divide in bolos vj. Sumat j ter die.

In Chronic Inflammation of Kidneys and Bladder.

Dr JOY.

UVÆ Raisins

The ripe fruit of the Grape vine, *Vitis Vinifera* (Nat. Ord. *Vitaceæ*), is nutrient and demulcent. Raisins are employed as a flavouring agent.

VALERIANÆ RADIX. *Valerian Root*

The root of *Valeriana Officinalis* (Nat. Ord. *Valerianaceæ*), has a strong and peculiarly disagreeable smell. It is a

nervine stimulant and antispasmodic. It acts upon the nervous centres without materially affecting the secretions. It is given in epilepsy, hysteria, spasmodic cough, dyspnoea, dyspepsia, neuralgia. The odour and medicinal properties of Valerian are due to a peculiar volatile oil, which when old contains an acid, Valerianic acid. This acid is also obtained by the artificial oxidation of oil of grain (Fusel oil). The various Valerianates used in medicine are formed by means of this acid, and combine with its peculiar antispasmodic properties the medicinal action of the base with which it is united in each case.

Vehicle.—The Ammoniated Tincture with compound tincture of lavender in chloroform water.

Dose of Pulvis Valerianæ, 10 to 30 grains.

Infusum ———, 1 to 2 ounces.

Tinctura ———, 1 to 2 drachms.

Tinctura ——— Ammoniatæ, $\frac{1}{2}$ to 1 drachm.

*VANILLA

The seed-pods of some American plants of the Nat. Ord. *Orchidaceæ*, particularly the *Vanilla Aromatica*, have been used in medicine on account of their aromatic properties. Vanilla contains a volatile oil. It is stimulant and aphrodisiac. It has been given in epilepsy, hysteria, &c., as a diffusible stimulant. Its fluid preparation may be employed as a pleasant vehicle for other medicines.

Dose of Pulvis Vanillæ, 5 to 20 grains.

Tinctura —, ʒ to 1 drachm.

*VASELINE

A yellow-coloured residuum after distillation of Petroleum or Rock Oil. One of the best mediums for ointments. It

is useful as a topical application to sores, burns, ulcers, &c., and as a disinfectant and lubricant in gynaecological examinations.

Solubility.—In ether; slightly in alcohol. Insoluble in water. Mixes with glycerine.

VERATRIA. *Veratria*

An impure alkaloid obtained from *Sabadilla*. It occurs in pale grey, amorphous, pulverulent masses, extremely irritating to the nostrils, with a bitter, acrid taste. *Internally*, it is a powerful emetic and purgative; in large doses, highly poisonous. It has been given in rheumatism and as a stimulant in nervous disorders. But it is chiefly employed as an external irritant in neuralgic pains, and in chronic gouty and rheumatic affections. It should not be applied when the skin is broken.

Solubility.—1 in 1000 of boiling water, 1 in 11 of rectified spirit, 1 in 6 of ether.

Dose of **Veratria*, $\frac{1}{15}$ to $\frac{1}{2}$ of a grain.
Unguentum *Veratria*.

*VERATRUM ALBUM. *White Hellebore*

The root stock of the Veratrum Album (Nat. Ord. *Melan-thaceæ*) is very acrid and poisonous. It has been employed as an active hydragogue cathartic, and given in gout in the same manner as Colchicum. It is generally used only externally, for the purpose of destroying vermin which infest the skin or hair.

Dose of Pulvis Veratri Albi, 1 to 2 grains.

Vinum ———, 10 minims may be given three times daily, in gout and rheumatism.

- 1 ℞ Pulv. Veratri, ʒij.
 Saponis Mollis, ʒj.
 Aquæ ferventis, q. s. ut fiat unguentum, semel quotidie

After two or three such frictions a warm bath is to be used.

In Scabies.—BOUCHARDAT.

VERATRIA VIRIDIS RADIX. *Green Hellebore Root*

The dried rhizome of *Veratrum Viride* (Nat. Ord. *Melanthaceæ*) is externally an irritant; internally, an emetic. In small doses it reduces the force of the heart, causes sweating, faintness, and dilation of the pupil. In the United States it is given as a remedy in inflammatory disorders of a sthenic type, especially acute rheumatism and pneumonia. It must be prescribed with caution.

Vehicle.—The Tincture in decoction of liquorice.

Dose of Pulvis Veratri Viridis, 4 to 6 grains, as an emetic.

Tinctura —————, 5 to 30 minims.

- 1 ℞ Tinct. Veratri Viridis, ℥xxx.
 Aque Camphoræ, ʒj.

In Acute Rheumatism.—Dr WILLIAM CARTER.

- 3 ℞ Tinct. Veratri Viridis, ℥iv—viij.
 Decoct. Glycyrrh ʒss. Misce.

To be taken every three hours to reduce pulse and diminish temperature.

In Pneumonia.—

VINUM. *Wine*

The various kinds of wine, when good and unadulterated, are often preferable to brandy and spirit as stimulants and cordials. They are considerably diluted, and therefore less dangerous than stronger liquors, and are more agreeable to the taste of most patients. But they sometimes agree ill with the stomachs of dyspeptic persons. Sherry wine is generally preferred for ordinary use. Port wine is often ordered to patients during convalescence, as it possesses some astringency, and is more tonic in its action. Effervescing wines are more exhilarant and less narcotic than others. Acid wines may be used in a diaphoretic regimen. Wines form agreeable vehicles for medicines. All stimulant drinks must be avoided when there is fever, with a full pulse, dry tongue, and hot skin. They are appropriate whenever the

system appears to be in want of nervous power to enable it to bear up against a disease.

In Cutaneous Eruptions and Constitutional Syphilis.

TROUSSEAU and REVEIL.

ZINCI ACETAS. *Acetate of Zinc*

It occurs in small colourless soluble crystals, having a metallic taste. It is rarely given internally, but is well adapted for use in astringent lotions and injections, being milder and less irritating than the sulphate. It may be used as a collyrium in ophthalmia, or as an injection in gonorrhœa and leucorrhœa.

Solubility.—1 in 3 of water, 1 in 4 of glycerine, 1 in 30 of rectified spirit.

Vehicle.—In pill, with glycerine of tragacanth.

Dose of Zinci Acetas, as a tonic, 1 to 2 grains; as an emetic, 10 to 20 grains.

or phagedænic sores, or the dangerous eruption of Lupus. It is safer than arsenious acid for such purposes. A dilute solution may be used as a wash for foul ulcers or scrofulous sores, or as an injection in gonorrhœa. When used as a caustic, the chloride is generally made into a paste with flour, and it is sometimes combined with chloride of antimony.

Zinci Chloridi Liquor may be used as a caustic, or diluted with water to form a disinfecting solution.

Burnett's Solution contains one pound of the chloride in five gallons of water. It is largely employed as a disinfectant and deodoriser; also to prevent the dry rot in wood, and to preserve animal matters from putrefaction.

Solubility.—1 in 1 of water, 1 in 2 of glycerine, freely in rectified spirit and ether.

Vehicle.—As a caustic made into a paste with flour or plaster of Paris; or mixed with an equal weight of gutta percha melted at the lowest possible temperature. This latter forms a pliable caustic capable of being moulded to any desired shape.

Antidote.—Carbonate of soda, emetics, warm demulcent drinks.

LINCKE.

***ZINCI IODIDUM. Iodide of Zinc**

Occurs in white acicular crystals or in masses. It is sometimes given internally in small doses in scrofula. It acts externally as an astringent and alterative. It is used to form collyria in scrofulous ophthalmia, and an ointment is employed in the friction of chronic glandular enlargements. It is best given internally in the form of syrup, as the salt, like iodide of iron, is very liable to decomposition.

Dose.—1 to 5 grains.

- 1 ℞ Zinci Iodidi, gr. iv.
 Aquæ destil. ʒvj. Misce: fiat collyrium.
2 ℞ Zinci Iodidi, ʒj.
 Adipis, ʒj. Misce: fiat unguentum.

An Alterative Stimulant in Skin Diseases.—DR HOOPER.

***ZINCI LACTAS**

Occurs in white crystalline plates. It is tonic and anti-spasmodic, and is useful in chorea, epilepsy, &c. It is more readily absorbed than other preparations of Zinc.

Solubility.—In 60 parts of water; insoluble in alcohol.

Vehicle.—In pill with hyoscyamus or belladonna.

Dose of Zinci Lactas, 2 to 5 grains.

ZINCI OLEAS. Oleate of Zinc

A preparation of Oxide of Zinc 1 oz., Oleic Acid 8 oz., heated in a water-bath until dissolved. It is applied topically to chronic eczema, offensive ulcers.

ZINCI OXIDUM. Oxide of Zinc

A white, tasteless, inodorous powder. It is not often used internally, though it may be employed in nervous disorders in the same manner as the sulphate. *Externally*, it is employed as an astringent and absorbent. The powder may be dusted over sores, excoriations, and eruptions. It forms a mild, cooling ointment, and is thus applied to wounds, ringworm of the scalp, impetiginous pustular eruptions, and tarsal ophthalmia.

Insoluble in water.

Vehicle.—The Powder enclosed in a wafer capsule. In pill with a green extract, as henbane or belladonna. As a lotion, in dilute glycerine and rose-water, or milk of bitter almonds.

Dose of Zinci Oxidi, 2 to 10 grains.

Unguentum Zinci Oxidi is largely used as a mild ointment.

In Hooping-cough.—AUGUSTIN.

***ZINCI PHOSPHAS**

A white crystalline, tasteless salt. It is a nervine tonic. It is given in anæmic states of the system, especially chlorosis.

Vehicle.—Decoction of barley.

Dose.—2 to 5 grains.

ZINCI SULPHAS. Sulphate of Zinc

This salt occurs in small colourless prismatic crystals, and is soluble in water. In small doses, it is astringent, tonic, and antispasmodic. It is given as an astringent in fluxes and hæmorrhages; as a tonic in general debility, from whatever cause; and as an antispasmodic in hysteria, chorea, epilepsy, neuralgia, and gastrodynia. In epilepsy the dose must be gradually increased from a small quantity to as many grains as can be tolerated without producing vomiting. In large doses, it acts suddenly as an emetic, without producing much nausea, and is therefore well adapted for use in cases of narcotic poisoning. *Externally*, the Sulphate of Zinc acts as one of the best astringents known. It is used in collyria, in gargles for relaxed uvula, in injections in gonorrhœa, &c., in lotions to sores.

Solubility.—1 in 1 of water and glycerine. Insoluble in rectified spirit.

Vehicle.—In pill, with glycerine of tragacanth. As an emetic, in water.

*Sticks of fused Sulphate of Zinc are employed as astringent applications to suppurating surfaces.

Dose.—As a tonic or astringent, 1 to 2 grains; as an emetic, 10 to 30 grains.

 Ext. Gentianæ, ℥ij.
 Ext. Colocynth. co. ℥j.

Misce, et div. in pil. xx. Sumat ij omni nocte.

In Costiveness with Nervous Debility.—Dr BABINGTON.

- 5 ℞ Zinci Sulphat. ℥j.
 Ext. Gentianæ, ℥j.
 Quin Sulph. ʒss.
 Ol. Anthemidis, ℥vj.

Misce. Div. in pil. xxx, quar. capiat j ter die.

A Tonic.—Dr GOLDING BIRD.

- 6 ℞ Zinci Sulphat. gr. ij.
 Ext. Conii, gr. iij. Fiat pilula.
 To be taken every night.

In Chorea.—Dr JAMES ANDREW.

- 7 ℞ Zinci Sulphat. gr. viij.
 Ext. Belladonnæ, gr. ij.
 Aquæ, ʒiv. Misce.

A tablespoonful four times a day—for a child of three years.

In Pertussis.—Dr H. W. FULLER.

- 8 ℞ Zinci Sulphat. ℥j.
 Ext. Gentianæ, ℥iv.
 Ext. Anthemidis, ℥ij.

Contunde massam, et divide in pil. 40, quar. sumantur duæ bis die, cum haustu infra præscripto :

- ℞ Inf. Gentianæ co. ʒx.
 Acid. Sulph. Aromat. ℥xij.
 Tinct. Zingiberis, ʒj. Misce.

A Tonic.—Dr COPLAND.

- 9 ℞ Zinci Sulphat. ℥j.
 Aquæ Cinnamomi,
 Aquæ, ana ʒss.

Misce: fiat haustus emeticus.

To Produce Vomiting speedily, after Poisoning, &c.

Dr HOOPEE.

- 10 ℞ Zinci Sulphat. gr. xv.
 Pulv. Ipecac. gr. xv.
 Aquæ, ʒiss.

Misce, ut fiat haustus emeticus.

[To be repeated in ten minutes, and then followed by large doses of calomel.]

In Dysentery and Cholera.—Mr. RICHARDSON.

- 11 ℞ Zinci Sulphat. ℥j.
 Inf. Quassie, ʒv.

Tinct. Calumbæ, ʒj. Misce: fiat mistura.
 One sixth part for a dose.

A Tonic.—Dr HOOPEE.

- 12 ℞ Zinci Sulph. gr. ij—iv.
 Tinct. Cantharidis, ℥xx.
 Aquæ, ʒj. Misce. Sumatur ter in die.
 In Paraplegic Palsy.—Dr BUDD.

- 13 ℞ Zinci Sulphat. gr. ij.
 Vini Opii, ℥v.
 Syr. Tolu. ʒj.
 Mist. Amyg. ʒix.
 Misce: fiat haustus, ter die sumendus.
 In the Latter Stages of Consumption.—Dr GREGORY.

- 14 ℞ Zinci Sulphat. gr. vj.
 Acidi Sulph. dil. ℥xxx.
 Syr. Aurantii, ʒss.
 Inf. Aurant. ʒvss.
 Misce: sumantur cochl. duo ter die.
 A Tonic.—Dr DEWITT.

- 15 ℞ Zinci Sulphat. gr. ½—j.
 Quin. Sulph. gr. ij.
 Inf. Rosæ Acidæ, ʒx.
 Tinct. Aurantii,
 Syr. Aurantii, ana ʒj.
 Misce: fiat haustus 4tâ quâque horâ sumendus.
 Dr COPLAND.

The following prescriptions are for external use :

- 16 ℞ Zinci Sulphat.
 Alum. ust.
 Sodæ Bibor. aa gr. xv.
 Pulv. Sacchari, ʒss.
 M. et pulv. subtilissimum reduc.
 A Dry Collyrium for Ophthalmic Affections.
 TROUSSEAU and REVEIL.

- 17 ℞ Zinci Sulphat. ʒj.
 Aquæ Rosæ, ʒvij.
 Oxymel. simplicis, ʒj.
 Misce: fiat gargarisma frequentur utendum.
 Dr COPLAND.

- 18 ℞ Zinci Sulphat. gr. ij.
 Vini Opii, ʒij.
 Aquæ Rosæ, ʒvj. Misce: fiat lotio.
 To be applied to the eyes.
 *In the Purulent Ophthalmia of Infants, after the Complaint
 has been Subdued by Lotions of Nitrate of Silver.*
 Mr J. FRANCE.

- 19 ℞ Zinci Sulphat.
Acidi Tannici, ana gr. xv.
Aque Rosæ, ʒvj. Misce : fiat injectio.
To be used two or three times daily.
In Gonorrhœa.—M. RICORD.
- 20 ℞ Zinci Sulphat. gr. xxx.
Aque, Oss.
Solve : fiat injectio per anum, post alvi dejectionem quotidie utend.
For Hemorrhoids.—Dr DAY.
- 21 ℞ Zinci Sulphat.
Cupri Sulph. ana ʒj.
Aque Rosæ, ʒviij. Misce : fiat lotio.
A Styptic.—Dr COPLAND.
- 22 ℞ Zinci Sulphat. gr. xvj.
Tinct. Lavend. co.
Sp. Rosmarini, ʒʒ ʒij.
Aque, ʒviij. Fiat lotio.
In Weak Ulcer.—Mr ERICHSEN.
- 23 ℞ Zinci Sulphat.
Aluminis, ʒʒ gr. iij.
Aque, ʒj. Fiat lotio.
In Bubo.—Dr F. P. ATKINSON.

ZINCI VALERIANAS. *Valerianate of Zinc*

Occurs in bright pearly tabular crystals, with a feeble odour of Valerianic Acid and a metallic taste. It has been much recommended as a powerful tonic and antispasmodic. It is useful in chorea, epilepsy, neuralgia, and hysteria.

Solubility.—1 in 15 of aromatic spirit of ammonia, 1 in 20 of ammoniated tincture of valerian, 1 in 40 of Parrish's chemical food, 1 in 60 of rectified spirit, 1 in 160 of cold water.

Vehicle.—In pill. Orange-flower water.

Incompatibles.—Vegetable astringents, acids, soluble carbonates, metallic salts.

Dose.—1 to 6 grains.

- 1 ℞ Zinci Valerianatis, gr. ix.
Pulv. Tragacanthæ, gr. xxx.
Misce, et div. in pil. xij. Sumat j nocte maneque.
In Nervous Headache.—DEVAY.
- 2 ℞ Zinci Valerianatis, ʒj.
Ext. Hyoscyami, ʒiiss.
℞. Fiant pil. xxx. Capiat unam bis terve die.
In Facial Neuralgia.—Dr H. GREEN.

- 3 ℞ Zinci Valerianatis,
 Quin. Valerianatis, ana gr. j.
 Ext. Gentianæ, q. s.
 Misce: fiat pilula, omni horâ repetenda.
 In Epilepsy.
- 4 ℞ Zinci Valerianatis, gr. ʒ.
 Aquæ flor. Aurantii, ʒiss.
 Misce: fiat haustus, ter die sumendus.
 In Hysterical Neuralgia.—Dr NELIGAN.
- 5 ℞ Zinci Valerianatis, gr. iss.
 Aquæ destil. ʒvss.
 Syrupi, ʒj.
 Misce. Sumat cochl. medium omni semihorio.
- 6 ℞ Zinci Valerianatis, gr. viij.
 Tinct. Valerianæ, ʒij.
 Aquæ flor. Aurantii, ʒiiij.
 Syr. Hemedesmi, ʒij.
 Misce: fiat mistura, cujus capiat cochl. j amplum sextis horis.
 In Hysteria and Chorea.—Dr NELIGAN.

ZINCUM GRANULATUM

Occurs in thin spongy flakes, or heavy solid grains. It is employed in the preparations of *Liquor Zinci Chloridi*, *Zinci Chloridum*, and *Zinci Sulphas*.

ZINGIBER. *Ginger*

The rhizome of *Zingiber Officinale* (Nat. Ord. *Zingiberaceae*), is a native of the East and West Indies. Its active constituents are a volatile oil and a soft acrid resin. It has an agreeable aromatic smell, and a warm burning taste. It is an excellent stimulant, carminative, and stomachic, and is often combined with purgative medicines to obviate their griping tendency. *Externally*, it is rubefacient, and may even raise a blister. The Tincture of Ginger is a good vehicle for the administration of the resinoid eclectic remedies as podophyllin, &c. *The *Oleoresina Zingiberis*, of the U.S. Phar., in $\frac{1}{2}$ to 1 grain doses, is an excellent addition to pills to prevent griping.

Dose of Pulvis Zingiberis, 10 to 30 grains.

Tinctura ———, 10 to 30 minims.

Tinctura ——— fortior (Essence of Ginger), 5 to 20 minims.

Syrupus ———, 1 to 4 drachms, as an addition to other medicines.

*Gingerin, 1 to 2 grains.

1 ℞ Tinct. Zingib. ʒij.

 Sp. Ammon. Arom. ʒss.

 Aque destil. ʒiiss.

Misce : fiat haustus, ter die sumendus.

In Acidity of Stomach and Heartburn.

2 ℞ Pulv. Zingib. ʒiiss.

 Aque ferventis, Oss. Macera per horas ij in vase leviter clauso, et cola ; tum adde

 Tinct. Zingiberis,

 Syr. Ejusdem, ana ʒss. Misce.

A Good Vehicle and a Grateful Aromatic in Flatulency.

Dr COPLAND.

3 ℞ Pulv. Zingib. ʒvij.

 Pulv. Sinapis ʒj

 Aque ferv. q. s. ut fiat pasta idoneæ crassitudinis, que super linteo vel alutâ illinenda sit, et parti affectæ applicanda.

A Stimulant to Local Pains

INDEX

OF

DISEASES AND REMEDIES

THIS Index is intended to assist the memory of the prescriber on the occurrence of any emergency. In most cases the remedies specially to be relied upon are mentioned first. The majority of the names are in Latin, to facilitate a reference to the body of the work. This reference will at once show the variety of ways in which each remedy may be prescribed.

ACIDITY, GASTRIC.

Alkalies (Potassa, Soda, Ammonia, Lime, Magnesia, their carbonates and bicarbonates). Acids (Nitro-hydrochloric). Tonics (Calumba, Cascarilla, Gentiana). Mercury. Bismuth.

ACNE.

Arsenic. Iodide of Sulphur. Mercury. Soap. Sulphur.

AGUE.

Arsenic. Emetics. Quinia. Warburg's Tincture.

ALBUMINOUS URINE. See Bright's Disease of Kidney.

ALCOHOLISM. Bark. Arsenic. Phosphorus. Capsicum.

AMAUROSIS.

Strychnia. Tonics. Purgatives. Blisters to temple.

AMENORRHOEA.

Aconite. Actæa Racemosa. Aloes. Chloride of Ammonium. Ergot. Iron. Savine.

ANEMIA.

Acids. Hypophosphites. Ammonia. Iron. Phosphate of Lime.

ANÆSTHETIC AGENTS.

Æther. Chloroformum. Methyleni Bichloridi
Freezing. Galvanism.

ANASARCA. General dropsy.

Acupuncture. Drastic purges (Jalapa, Scs
Croton Tiglium, Colocynth, Elaterium, Hyc
chlor). Scilla. Colchicum. Copaiba.
Salines (Potass. Acet., Bitart., &c.). Digital

ANEURISM.

Restricted diet. Rest. Iodide of Potassium.

ANGINA PECTORIS.

Arsenic. Æther. Morphia. Nitrite of An
phorus. Nitro-glycerine.

APHONIA. Loss of voice.

Blisters. Cataplasma Sinapis. Galvanism.
gargles in simple relaxed throat. Mercur.
Potassium in syphilitic cases.

APHTHÆ. Thrush.

Potassæ Chloras. Mel Boracis. Liquor Soda
Alum. Nitric Acid. Liq. Calcis Chlor.
Rhatany, Catechu, &c.

APOPLEXY.

Croton Oil.

ARACHNITIS. Inflammation of membranes of br

Drastic purges. Pil. Hydrarg. Shaving. C
or Ice to head. Darkness and Quiet.

ASCARIDES.

Purge (Castor oil, Jalap, Scammony, Alo
Clysters of common Salt, of Assafœtida,
Quassia, Artemisia. Artemisia contra. Sai

ASCITES.

Drastics (Elaterium, Scammonium, Ol. Tiglii,
Potassæ Tart. Acid.). Salines. Pil. Hydra
Digitalis. Taraxacum. Copaiba.

INDEX

ASTHMA.

Stramonium. Opium. Bromide of Potassium. Chloral Hydrate. Coffee. Chloroform. Hyoscyamus. Colchicum. Iodide of Potassium. Ipecacuanha. Valeriana. Assafetida. Digitalis. Lobelia. Alum. Aconite. Arsenic. Atropia. Nitrite of Amyl.

BED-SORES.

Plasters of Amadou, &c. Unguentum Plumbi. Alum poultice. Alcohol. Glycerine. Iodoform. Nitrate of Silver.

BILE, Deficiency of.

Grey Powder.

BITES OF INSECTS, &c.

Ammonia.

BOILS.

Collodion. Opium. Poultices. Nitrate of Silver. Sulphides.

BONES, Diseases of.

Cod-liver Oil. Phosphate of Lime. Nitric Acid.

BRAIN, Anæmia of.

Bromide of Potassium. Phosphorus. Hydro-bromic Acid.

BREASTS, Inflammation of.

Massage. Saline Purge. Belladonna Plaster.

BLADDER, Inflammation of.

Pareira. Uva Ursi. Opium. Buchu. Copaiba. Hyoscyamus.

BLEEDING. See Hæmorrhage.

BRIGHT'S DISEASE OF KIDNEY.

Purge (as Jalap) at morning. Diaphoretic (Dover's powder) at night. Hot-air baths. Cupping of loins for active inflammation. Bitartrate of Potash. Iron. Digitalis. Tannin. Tartrates.

BRONCHITIS.

Antimony. Ipecacuanha. Scilla. Potassæ. Bicarb. Ammonia. Iron. Senega. Sulphur. Turkish Bath.

BUBO.

Poultices. Emplastrum. Hydrarg., Ung. Plumbi., U
Plumbi Acet., Ung. Opii., Iodine.

BURNS and SCALDS.

Cotton wool. Flour. Chalk. Linimentum Calcis.
tutions of Chlorinated Soda. Decoct. Lini sem. Sim
Ointment. Collodion. Carron Oil. Bicarbonate
Soda.

CACHEXIA.

Animal food. Wine and Stimulants. Change of
Morrhæ Oleum. Tonics.

CALCULOUS AFFECTIONS, with acid urine.

Potash, Soda, Lithia, Lime, Magnesia, their carbon
and bicarbonates. Sodæ Phosphas. Ammonia Ph
phas. Ammonia Benzoas. Acidum Benzoicum. I
Ursi. Buchu. Pareira.

CALCULOUS AFFECTIONS, with alkaline urine.

Acidum Nitricum. Acidum Hydrochloricum. Strych
Tonics. Stimulants. Uva Ursi. Buchu. Pareira.

CALCULI, BILIARY.

Soda and its carbonates. Opium. Æther.

CANCER.

Escharotic applications (Actual Caution, Zinci Chlorid
Antimonii Chloridum, Potassa fusa). Anodyne ap
cations (Unguentum Opii, Cataplasma Opii, Ung.
Cataplasma. Belladonna, Carrot and Charcoal p
tices). Arsenic. Bromine. Chloral. Conium I
form. Morphia. Opium. *To remove smell*, I
Sodæ Chlor, Glycerine of Gallic and Tannic A
Terebine, Thymol, Sanitas, Ground Coffee.

CARBUNCLE.

Belladonna. Carbolic Acid. Iodine. Opium. Sulphur
Poultice.

CANCERUM ORIS.

Arsenic. Nitric Acid. Potassæ Chloras. Borax externa
Potassæ Permanganas.

CARDIALGIA. Heartburn. See Acidity, Gastric.

CARIES OF BONES.

Potassi Iodidum. Morrhue Oleum. Phosphate of Lime.

CATARRH.

Ipecacuanha. Scilla. Sp. Æth. Nit. Liq. Ammonia
Acetatis et Citratis. Ammoniacum. Benzoinum.
Myrrha. Tolu. Ipecacuanha. Camphor. Terebinth.
Oleum. Salines. Purgatives. Tonics.

CEPHALALGIA. Headache.

Purgatives, Tonics, or Stimulants, according to cause.

CEREBRAL INFLAMMATION.

Drastics. Cold applications. Clysters of Tartar Emetic.
Colocynth, &c. See Arachnitis.

CHANCRE.

Caustics (Argent. Nit., Potassa fusa, Acidum Nitricum).
Lotio Hydrarg. Oxidi. Linim. Hydrarg. Ung. Hyd.
Nitratis. Ung. Hyd. Oxidi Rubrum. Ung. Zinci.
Iodoform.

CHAPS.

Glycerine. Honey. Mel Boracis. Ung. Sambuci. Sapo
Camphoratus. Collodion.

CHILBLAINS.

Lotion of Iodine, Hydrochlor. Acid, or Carb. Potash.
Ointments of Alum, Camphor, Creasote, Henbane,
Mustard, Borax. Balsam of Peru. Cajiput Oil. Cap-
sicum.

CHICKEN-POCK.

Mild purges. Salines. Rest, and moderate support.

CHLOROSIS. See Anæmia.**CHOLERA, ENGLISH.**

Castor Oil. Rhubarb, Senna. Chalk. Catechu. Poul-
tices.

CHOLERA, MALIGNANT.

Rhubarb and Magnesia, as prophylactic. Sulphuric acid?
Quinine? Emetic of Salt? Wine and Stimulants.
Warm poultices to abdomen. Opium? Calomel?

CHORDEE.

Aconite. Camphor. Cantharides.

CHOREA.

Arsenic. Actæa Racemosa. Chloral. Cod-liver-oil.
Valerian. Veratrum Viridi. Conium. Iron. Sulphate
of Zinc. Bromide of Potassium.

COLIC. Pain in belly, with flatulence, and without inflammation.

Purgatives (Rhubarb, Senna, Castor oil). Alkalies (Soda,
Chalk, Magnesia). Turpentine. Assafœtida. Valerian.
Ether. Warm fomentations. Plasters of Opium, Bel-
ladonna, Camphor, Turpentine. Clysters of Turpentine,
Assafœtida, Tobacco.

COLICA PICTONUM. Lead colic.

Alumen. Acidum Sulphuricum. Magnes. Sulph. Ol.
Ricini. Opium. Potassii Iodidum. Anodyne plasters.

CONDYLOMATA. Warts.

Caustics (Nit. Silver, Nit. Acid). Lotions of Iodine, Carb.
Potash, or Hydrarg. Perchlor. Ung. Hyd. Nit. Ox.
Ung. Hyd. Nitratis. Acid. Acet. Chromic Acid.

CONSTIPATION.

Purgatives (Rheum, Aloes, Ol. Ricini, Colocynthis, Jalapa,
Scammonium, Podophyllum, Senna, Magnesia, Magnes.
Sulph., Sod. Sulph., Sod. et. Pot. Tart., Elaterium, Ol.
Tiglii). Laxatives (Cassia, Prunum, Manna). Brown-
bread. Exercise. Cold bathing. Tonics (Cinchona,
Calumba, Ferri Carb., &c.). Fel Bovis. Terebinthina.
Enemata.

CONSUMPTION. See Phthisis.**CONTUSIONS.**

Lotions of Arnica. Lotions of Liq. Plumb. Diacet., Acetic
Acid, Sulph. Copper, Carb. Potash. Linimentum Calcis
Unguent.

CONVULSIONS. See Epilepsy, Hysteria, Chorea.**CONVULSIONS OF CHILDREN.**

Castor oil. Tonics. Wholesome diet.

CORYZA. Cold in the head.

Sp. Æth. Nit. Salines (Pot. Chloras, Pot. Nitrates). Soda
Bicarb. Ipecacuanha. Mild purging. Warm bathing.
Quinia. Ammonia. Camphor. Iodine. Inhalation.

OUGH, CHRONIC.

Mist. Acaciæ. Mist. Amygdalæ. Oxymel Scillæ. Tinct. Camph. co. Myrrha, Tolu. Decoct. Cinchonæ with Ammonia. Ipecacuanha and Hyoscyamus. Syr. Papaveris. Conium. Opium.

RAMP IN THE STOMACH. See Acidity, and Colic.

ROUP.

Leeches to throat. Warm bath. Vinum Antimon., to keep up nausea. Cataplasma Sinapis. Hyd. Subchlor., or Castor Oil. Ipecacuanha Wine.

ROUP, SPASMODIC, of Infants.

Warm Bath. Castor Oil. Stimulants. Tonics.

UTANEOUS DISEASES.

Alkalies (Potash, Soda, their carbonates and bicarbonates). Sulphur, Potassii Sulphurata. Acidum Arseniosum, Liquor Potassæ Arsenitis. Acidum Carbolicum. Arsenici Iodidum, Liq. Hydrarg. et Arsenici Iodidi (Donovan's). Creasote. Fuligokali, Pix nigra, Aqua Picis liquidæ. Hydrarg. Subchlor., Hydrarg. Perchlor., Pil. Hydrarg. Antim. Tart. Bromum. Potassii Iodidum Guaiacum, Sarsa, Mezereum. Oleum Morrhæ. *Externally only*, Ung. Sulphuris, Ung. Creasoti, Ung. Picis nigræ, Ung. Hydrargyri, Ung. Hyd. Subchlor., Ung. Hyd. Nit. Ox., Lotio Hyd. Ox., Ung. Hyd. Am. Chlor., Ung. Iodin., Ung. Pot. Iodidi. Lotio Sod. vel Pot. Carb. Liquor Calcis. Balneum Sulphurosum, &c.

YNANCHE. Tonsillitis, or Quinsy.

Leeches. Poullices. Emetics. Nit. Silver to fauces. Guaiacum internally. Pot. Iodidum.

YSTITIS. Inflammation of bladder.

(*When acute*) Leeches to perinæum or pubes. Castor Oil. Warm Bath. Opium. Pulv. Ipecac. co. (*When chronic*) Copaiba, Uva Ursi, Cubeba, Buchu. Hot Enemata.

DELIRIUM TREMENS.

Stimulants in moderation. Opium. Quinia. Moschus. P. Ipecac. co. Antim. Tart. Digitalis. Capsicum.

DIABETES. Saccharine urine.

Animal food. Fats and oils. Exclude starch from diet.
Gluten and bran-bread. Codeia. Salicylate of Soda.
Glycerine. Valerian.

DIARRHŒA.

Purgatives (Castor Oil, Senna, Pil. Hydrarg., Rhubarb).
Absorbents (Creta, Bismuthi Nit.). Aromatics (Cinnamomum, Myristica, Caryophyllus, Pimenta, Zingiber, Piper, Cubeba, Capsicum, Mentha piperita, Ol. Cajuputi). Astringents (Opium, Acidum Tannicum, Acidum Gallicum, Catechu, Kino, Krameria, Hæmatoxyllum, Gallæ, Quercus, Tormentilla, Cupri Sulphas, Plumbi Acetas, Alumen, Acidum Sulphuricum). Cinchona, Quinia, Calumba, Quassia. Antim. Tart. Ipecacuanha.

DIPHTHERIA. Malignant sorethroat, with formation of membrane.

Nit. Silver to throat. Liq. Ferri Perchloridi. Wine and support. Quinia, et Cinchonæ præparata. Ammonia. Potassæ Chloras. Mel Boracis. Liq. Sodæ Chloratæ. Salines. Sp. Æth. Nit., Sp. Æth. Chlor. Chinoline.

DROPSY. See Anasarca, and Ascites.**DYSENTERY.**

Leeches, when acute. Warm fomentations. Ol. Ricini. Opium, Morphia. Ipecacuanha. Enema or suppository of Opium. Astringents (Plumb. Acet., Cupri Sulph., Acid. Tannic., Terebinthina). Poultices.

DYSPEPSIA.

Purgatives (Ol. Ricini, Rheum, Aloes). Alkalies (Sod. Carb., Liqueur Calcis, Magnesia, Magnes. Carb., Liq. Magnes. Bicarb.). Absorbents (Creta, Bismuthi Nit.). Charcoal. Aromatics (Cinnamomum, Zingiber, Capsicum, Cubeba, Coriandrum, Carui, Anisum, &c.). Tonics (Cinchona, Calumba, Artemisia, Gentiana, Ferri Carb., Acid. Sulph. dil., Argent. Nit.; Strychnia, small doses). Alteratives (Pil. Hydrarg., Hyd. c. Cretâ, Hyd. Subchlor., Colchicum, Ipecacuanha, &c.). Acidum Lacticum. Pepsina. Acidum Carbolicum.

YSFNCEA. See Asthma.

YSURIA.

Opium. Copaiba. Antim. Tart. Salines. Pareira.

AE, INFLAMMATION OF.

Leeching. Poulticing. Warm fomentations, Foment. of Decoct. Papav. Injection of Opium, Morphia, or Alum.

CTHYMA. See Cutaneous Diseases.

CZEMA. See Cutaneous Diseases.

Arsenic. Quinia. Glycerine. Mercury. Tar. Oils and Fats. Poultices.

LEPHANTIASIS. See Cutaneous Diseases.

MPHYSEMA OF LUNG. See Asthma.

Ether and Stimulants. Hyoscyamus, Stramonium. Arsenic, Lobelia. Purgings. A dry, bracing climate.

MPYÆMA. Effusion following Plenrisy.

Calomel and Opium. Tapping. Quinine, Iodine.

ENDOARDITIS.

Blistering. Antim. Tart. (To keep up nausea). Calomel and Opium. Leeching. Purgatives.

INLARGEMENTS, GLANDULAR.

Apply Tinct. Iodin., Tinct. Iodin. co., Ung. Iodinii, or Ung. Pot. Iod. *Internally*, Potassii Iodidum. Ferri præparata. Aloes. Quinia. Pil. Hydrarg. Calcium Sulphide.

ENTERITIS. Inflammation of bowels.

Leeches to abdomen. Warm fomentations. Ditto with Tinct. Opii or Decoct. Papav. Calomel and Opium. Castor oil. Warm enemata. Blistering when chronic.

QUINIA. Glanders.

Wine, Brandy, and support. Nitric acid? Quinia?

PILEPSY.

Purgatives (Aloes, Rhubarb, Castor oil). Wine and stimulants. Good living and air. Quinine and tonics. Specific remedies (Argent. Nit., Argent. Ox., Zinci Sulph., Zinci Acet., Zinci Oxidum, Zinci Valerianas, Ferri præparata, Cupri Sulph., Cupri Ammon. Sulph., Liq. Pot. Arsen.,

Terebinthinae Oleum, Cotyledon, Valeriana, Indigo), Bromides, Seton, Blisters.

EPIDIDYMITIS.

Oleate of Mercury and Morphia.

EPISTAXIS.

Raise arms. Cold to nape of neck or forehead. Plug nares. Injection of Alum, Sulph. Copper, or Sulph. Iron. Hamamelis. Ergot.

ERYSIPELAS.

Purgatives (Senna, Hyd. Subchlor., Magnes. Sulph., Sod. et Pot. Tart.). Calomel and Opium. Leeches. Vinum Antimonialis, Vinum Ipecac. *In low cases*, Wine, support, Quinine. *External applications*, Warm foment., Starch, Chalk, Magnesia, Nit. Silver. Cataplasma fermenti, or Lotio Sodæ Chlorin., or Cataplasma Carbonis, for gangrene, White-lead paint.

ERYTHEMA.

Saline Aperient. Cool lotion of Spirit, Ether, or Chloroform. Lotio Plumbi Subacet. Lotio Sodæ Carb.

EXCORIATIONS.

Dry Powder (Chalk, Starch, Plumbi Carb.). Unguentum Galeni ("Cold Cream"). Ung. Zinci, Ung. Plumbi Carb. Sapo Camphoratus. Glycerinum.

EXANTHEMATA. See Fevers, Eruptive.

FACE, ERUPTIONS OF.

Alteratives (Pil. Hydrarg., Hyd. Perchlor., Aloes, Liq. Pot. Arsen., Sarsa, Potassii Iodidum). Cool washes (Sod. Carb., Ammon. Chlor., Pot. Nit., Aquæ Rosæ, Aquæ Amygdalæ, Lotio Plumb. Diacet.). Unguenta.

FAINTING.

Ammonia to nostrils. Cold water to face and chest. Fresh air. Loose clothing. Stimulants. Place head between legs.

FEVERS, ERUPTIVE.

Antim. Tart., Ipecacuanha and Hyd. Subchlor., in high fever. Salines (Potassæ Nitras, Potassæ Chloras, Ammonia Acetatis Liquor; Liq. Ammon. Citratis; Potassæ Tartras, Tartras Acida, Acetas; Pulveres effervescentes). Acid drinks (Acidum Nit. dil., Acid. Hydrochlor. dil.,

Acid. Sulph. dil., Acid. Cit., Acid. Tart., Succus Limonum). Purgatives (Magnes. Sulph., Sodæ Pot. Tart., Oleum Ricini, Jalapa, Pil. Hydrarg.). Diaphoretics (Salines Sp. Æth. Nit., Spir. Chloroform., Ipecac., Pulvis Doveri; Opium, cautiously; Antim. Tart., in small doses). In low cases, Wine and support. During convalescence, Quinia and Iron.

FEVER, INTERMITTENT. Ague.

Between paroxysms, Quiniæ Sulphas; any salt of Quinia, Cinchonia, Quinidia; any preparation of Cinchona Bark. Cusparia, Cascarilla, Calumba, Gentiana, Quassia, &c. *Taken continuously*, Liquor Potassæ Arsenitis. Also preparations of Iron and Copper, and Chloride of Sodium. For enlarged spleen, Ferri Iodidum, Ferri Bromidum. Purgatives.

FEVER, TYPHOID.

Liq. Ammonia, Sp. Ammon. Arom., Ammon. Carb. Acid drinks. Moschus. Camphora. Capsicum. Mist. Terebinthinæ. Cinchona and Quinia when fever has abated. For diarrhoea, Opium with caution, vegetable astringents. To head, shaving and cool lotions. To belly, warm applications, Cataplasma Sinapis, Cataplasma. Terebinth. Support with stimulants if necessary.

FISTULÆ. Burrowing ulcers.

Stimulating injections (Sol. Argent. Nit., Tinct. Iodin. co., Sol. Cupri Sulph., Sol. Hyd. Perchlor., Tinct. Canth., Tinct. Myrrhæ).

FLATULENCE.

Purgatives (Rheum, Aloes, Pil. Hydrarg.). Cordials (Vinum, Tinct. Aurant., Tinct. Capsici, Pulv. Aromat., Pulv. Cretæ Aromat., Piperes, Menthæ, Zingiber, Cinnamomum, Coriandrum, Pimenta, Anisum). Assa-fœtida, Moschus. Alkalies (Ammonia, Soda, and their carbonates). Argent. Nit., Argent. Oxidum. Terebinthina, Enema Terebinth.

FOETOR OF BREATH.

Purgatives. Hyd. Perchlor. Acid. Nit. dil. Washes of Alum, Acid. Nit., Tannin, Acid. Carbol. Lozenges of Catechu, Charcoal.

FROST-BITES.

If no gangrene, Stimulating liniments. See Chilblai
If gangrene, Poultices and Emollient ointments.

GALL-STONES.

During passage, Warm bath, Opium. Chloral. G semium. Chloroform. *Afterwards*, Calomel, Pur tives, Alkalies.

GANGRENE.

Wine and support internally. *Locally*, Poultices, Dec Papav. Decoct. Lini sem. Linim. Opii. Stimulat lotions of Tinct. Myrrhæ, Ol. Terebinth., Vinum. G plasm or lotion of Sod. Chlorin. or Charcoal for fæ Ung. Resinæ, Ung. Plumbi Acet.

GASTRALGIA. Gastrodynia, pain in stomach.

For Acidity, see above. Otherwise, Bismuthi Subi Opium, Aconite, Conium. Carbolic Acid. Wine : Cordials (see Flatulence). Aloes, Rheum. Nux Vom Turpentine.

GLANDS, ENLARGEMENT OF.

Internally, Liq. Iodinii. Potassii Iodidum. Ferri Iodid Belladonna. Olenm Morrhuæ. Cinchona, Qui Saline purges. Calcium Sulphide. *Externally*, Ti Iodinii rubefaciens, Tinct. Iod. co., Emplastrum Unguentum Iodinii, Emplast. et Ung. Pot. I Emplast. et Linim. Hydrarg., Emp. Ammoniac Hydrarg., Emp. Conii, Emp. Opii. Decoct. Papav.

GLEET.

Bismuth. Cantharides. Copaiba. Iron. Lead. O Sandalwood.

GOITRE. See Glands, Enlargement of.**GONORRHOEA.**

If high inflammation or fever, Rest, Abstinence, Leech Purging (Ol. Ricini, Pil. Hyd., Senna). Poultic Warm fomentations. When active inflammation subsided, *internally*, Copaiba. Cubeba. Acid. Su dil. Argent. Nit. Acid. Tannic. Catechu. Opium. Ti Ferri Perchlor. Cinchona. Salines, &c. *Loc* injections of Nit. Silver, Sulph. Copper, Acet. L Sulph. Zinc, Tannin, Opium, Iodine, Iodide of Iron

GOUT.

Internally, Colchicum. Alkalies (Ammonia, Potash, and their carbonates). Pil. Hydrarg., Hyd. Subchlor. Opium with a purge. Cinchona, Quinia, in chronic cases. *Locally*, Cotton wool, Flannel. Warm pediluvia. Liniments of Opium, Belladonna, Conium. Lotion or foot-bath of Carb. Soda, Salicylate of Soda. Blister above joint.

GRAVEL. See Calculous diseases.

GUMS, LOOSENESS OR BLEEDING OF.

Tooth-powders of Alum, Catechu, Quinine, &c. Mouth-washes of same, of Sulph. Zinc, Tannin, Nit. Silver, Myrrh, Borax.

HÆMATEMESIS. Bleeding from Stomach.

Farinaceous diet. Cold drinks and Ice. Gallic and Tannic Acid. Quinine. Acid. Sulph. dil. Ergot. Hamamelis. Turpentine. Ice externally in aggravated cases.

HÆMATURIA.

Camphor. Hamamelis. Tannin.

HÆMOPTYSIS. Spitting of blood.

Bleeding in plethoric cases. A blister or mustard poultice to chest. Low diet. Cold drinks, or Ice. Rest. Acid. Sulph. dil. Plumb. Acet. Terebinthinæ Ol. Tinct. Opii. Catechu. Acid. Tannic. Zinc. Digitalis. Potassæ Nitras. Ergot.

HÆMORRHAGE, INTERNAL. See Hæmatemesis, Hæmoptysis, &c.

HÆMORRHAGE, EXTERNAL. See Epistaxis, Purpura, Scurvy.

HÆMORRHOIDS. Piles.

Aloes, Rhubarb, Castor oil. Confection of Senna, Sulphur, Jalap. Tartrate Potash. Confection of Black Pepper. Ointments, *Astringent*, of Alum, Lead, Mercury, Ox. Mercury, Zinc, Gall, Tannin. *Anodyne*, of Opium, Belladonna, Morphia, Stramonium. Lotions. *Astringent*, of Sulph. Zinc., Diacet. Lead, Bichlor. Merc., Sul. Copper, Nit. Silver. *Anodyne*, of Opium, Poppies, &c.

HEADACHE. See Cephalalgia.

HEART, INFLAMMATION OF. See Endocarditis, Pericarditis.

HAIR, LOSS OF.

Unguentum Cantharidis. Tinctura Cantharidis. Lotio
Hyd. Perchlor. Ung. Bals. Peruv.

HEMICRANIA.

Quinia. Ferri præparata. Purgatives, if plethoric. Wine,
if reverse. Valeriana. . Spir. Æth. co. Chloroformum.

HEMIPLEGIA. See Paralysis.

HEPATITIS. See Liver, Inflammation of.

HERNIA. Rupture.

Reduction. Truss to keep in place. *When strangulated,*
Hot Bath, Opium, Chloroform, Belladonna, Tobacco
clyster, &c.

HERPES. See Cutaneous affections.

HICCOUGH. See Acidity, and Flatulence.

HOOPING-COUGH.

Vinum Antim. Vin. Ipecac. Pulv. Ipecac. co. Am-
monia, et Carb. Oxy mel Scillæ. Spir. Æth. Nit.
Potass. Bicarb., Brom. Cinchona, Quinia, Assafoetida.
Moschus. Bals. Tolut. Copaiba. Carbolic Acid. Ex-
ternally, Linim. Ol. Succini. Linim. Ammonisæ. Linim.
Saponis. Linim. Opii. Emplast. Assafoetida, Emp.
Belladonnæ. Linim. Camph. co.

HYDROPHOBIA.

After bite, Caustics (Actual Caution, Chloride Zinc,
Potassa fusa). *During paroxysm,* Ice to spine and
cranium. Chloroform. Opium. Cannabis. Nutrient
Enemata. Chloral Hydrate.

HYDROCEPHALUS. Water on the brain.

Potassi Iodidum. Ferri Iodidum. Quinia. Vinum.
Purgatives (Hyd. Subchlor., Pil. Hyd., Jalapa, Ol. Ricini,
Ol. Crotonis). Diuretics (Digitalis, Scilla). *Locally,*
during fever, Cold applications. *When chronic,* Blister-
ing, Mustard Poultices, Stimulating liniments, Croton
oil.

HYDROTHORAX. Water on the chest.

With general dropsy. See Anasarca.

After Pleurisy. See Pleurisy.

HYPOCHONDRIA.

Change of air and scene. Mild purgative course. Quinia and tonics. Rem. for Dyspepsia.

HYSTERIA.

Mild purging. Aloes. Iron. Quinia. Stimulants (Ammonia, Amm. Carb., Æther Sulph., Spir. Æth. Nit., Assafoetida, Valeriana, Castoreum, Moschus, Sp. Succini). Opium, Morphia.

IMPETIGO. See Cutaneous affections.

INCONTINENCE OF URINE.

Belladonna. Chloral. Ergot. Iron. Strychnia.

INFLUENZA.

Actæa Racemosa. Sulphurous Acid. Drastic Purg. Stimulants. Good diet.

INTERTRIGO.

Bismuth. Glycerine of Tannin. Soap.

IBITIS.

Hyd. Subchlor., Pil. Hyd. Leeching. Blisters to Temple. Turpentine internally. Darkness.

ISCHURIA. Suppression of urine.

Bleeding, Hot bath, Opium. Ol. Ricini, Aloes. Puly. Ipecac. co. Liq. Annon. Acet.

ITCH. See Scabies.

JAUNDICE. See Hepatitis, and Gall-stones.

When no severe pain or fever, Emetics (Antim. Tart., Ipecacuanha); then Purgatives (Pil. Hyd., Hyd. Subchlor., Jalapa, Magnes. Sulph.). Balneum Acid. Nitro-mur.

JOINTS, INFLAMMATION OF. See Gout, Rheumatism, Scrofula.

KIDNEYS, INFLAMMATION OF. See Bright's disease, and Calculous affections.

LABOUR, RETARDED.

If no obstruction, Ergota. Sodæ Biboras.

LARYNGITIS.

Acute. Leeching, Aconite. Tart. emet. Calomel and Opium. *Threatened suffocation*, Warm bath, Tracheotomy.

Chronic. Blisters. Cataplasm. Sinapis. Unguent. Antim. Tart. Nit. Silver, locally. Lancing gums. *Internally*, Potassii Bromid. Hyd. Subchlor. Cod-liver oil. *For Dyspnœa*, Opium, Belladonna, Stramonium.

LEUCORRŒA.

Internally, Purgatives. Ferri præparata. Potassii Iodidum. Copaiba. Terebinthina. Guaiacum. Opium. Acid. Sulph. dil. and other astringents. *Locally*, Nit. Silver, Alum, Acet. Lead, Sulph. Copper, Sulph. Zinc, Tannin, Gallic Acid, Tinct. Galls, Tinct. Catechu, Decoct. Quercûs, Tinct. Iodinii, Tinct. Opii.

LEPRA. See Cutaneous affections.**LIVER, INFLAMMATION OF.**

Leeching and Cupping. Leeches to arms. Blisters, when fever has subsided. Ung. Hydrargyri, Linim. Hydrarg. Pil. Hydrarg., Hyd. Subchlor. Magnes. Sulph., Aloes, Senna. Antim. Tart. Ipecacuanha. Rheum. Podophyllum.

Chronic. Pot. Iod. Acid. Nit. dil. Balneum Nitromuriaticum. Taraxacum.

LUMBAGO.

Rem. for Rheumatism (Alkalies, Purgatives, Colchicum). Potassii Iodidum. Aloes. Linim. Opii. Ung. Belladonna. Lin. et Emp. Belladon. Emp. Saponis c. Opio. Quinia. Morphia subcutaneously.

LUNGS, INFLAMMATION OF. See Pneumonia.**MALARIA.**

Quinine. Warburg's Tincture.

MAMMÆ, INFLAMMATION OF.

Ricini Ol. Salines. Poultices. Ung. Opii, Decoct. Papav. Ung. Belladon.

MANIA.

Cold douche. Shower-bath. Quiet. Purgatives. Opium. Chloral. Hyoscyamine. Bromide of Potassium.

MARASMUS.

Wine and good living. Oleum Morrhuæ. Quinia and tonics. Ferri præparata.

MEASLES. See Fevers, Eruptive; and Cough.

MELANCHOLIA.

Tonics. Purgatives. Wine. Pil. Hydrarg. Aloes.

MENINGITIS. See Arachnitis.

MENORRHAGIA.

Leeching. Rest in recumbent posture. Cool acid drinks. Ice to vulvæ. Saline purgatives, Pil. Hydrarg. Astringents (Plumb. Acet., Alum, Acid. Tan.), *externally and internally*. Quinia, Steel, and Wine, for exhaustion. Bromide of Potassium. Ergot. Tannic and Gallic Acids. Cannabis Indica.

MICTURITION, FREQUENT.

Cantharides.

MICTURITION, PAINFUL.

Alkalies, Camphor, Cantharides.

MOSQUITOES.

Carbolic-acid Solution.

MOUTH, AFFECTIONS OF. See Aphthæ, Cancrum oris, Fætor, &c.

MUMPS.

Grey powder. Guard face.

NERVOUS EXCITABILITY.

Assafœtida, Valeriana, Camphora, Moschus, Castoreum, Amonia. Hyoscyamus, Opium. Ether Sulph. Quinia and tonics. Potass. Bromidum. Ferri præp. Zinci præp. Argenti Oxidum.

NEURALGIA.

Inflammatory. See Rheumatism, Gout. Warm fomentations. Decoct. Papav. Ung. et Linim. Opii et Belladonnæ. Oleate of Mercury.

Intermittent. Quinia and Tonics. Arsenic. Pot. Iodidum. Conium.

Chronic. Linim. et Ung. Opii aut Belladonnæ. Emp. Belladonnæ. Ung. Aconitiæ. Chloral Hydrate. Gelsemijum. Veratria.

NIPPLES, EXCORIATION OF.

Quinine. Arnica. Glycerine. Ung. Opii. Unguent.
Zinci. Ung. Plumbi Acet. Emplast. Opii, Emplast.
Belladonnæ.

NODES. See Periostitis.**NYMPHOMANIA.**

Bromide of Potassium. Camphor.

OBESITY.

Alkalies. Milk diet.

ONYCHIA. Whitlow.

Poulticing, Lancing. Removing edge of nail. Ung. Zinci,
Ung. Hyd. Nit. Ox. Argent. Nit.

OPHTHALMIA. See Rheumatism, Scrofula.

Astringents (Unguent. vel Lotio Argent. Nitratis, Lotio
Plumb. Diacet., Aluminis, Cupri Sulph., Zinci Sulph.,
Rosæ, inf. co.; Ung. Zinci to lids). Anodynes (Vin.
Opii. Decoct. Papav., Tinct. Belladonnæ). *Internally*,
Pil. Hyd. Pot. Iod. Quinia.

ORCHITIS. Inflamed testicle.

Acute. Leeching. Antim. Tart. Pil. Hyd. Ol. Ricini.
Low diet.

Chronic. Strapping. Ung. Hyd. Potassii Iodidum or
Pil. Hyd., internally.

OZÆNA.

Pil. Hydrarg. Potassii Iodidum. Injections of Argent.
Nit., Alum., Acid. Tan., Liq. Calcis Chlor.

PALPITATION OF HEART.

Remedies for Inflammation; if none, remedies for Acidity
or Nervous excitability. Aconite, Camphor. Hot foot-
bath. Purgatives.

PARALYSIS.

Recent. Rest and Saline purgatives.

Chronic. Nux Vomica, Strychnia. Hyd. Perchlor. Toxi-
codendron. Electricity. Arg. Nit. Phosphorus. Calabar
Bean. Ergot. Frictions of Arnica, Armoracia, Tinct.
Nux Vom., Sinapis, Cantharides.

PERICARDITIS. Inflammation of pericardium. See Rheumatism.

Acute. Bleeding, Cupping, or Leeching. Antim. Tart. repeatedly. Morph. Acet. Hyd. Subchlor. repeatedly, and Opium; Saline purges. Blister, kept open.

Chronic. Blisters. Ung. Antim. Tart. Ung. Hydrarg. Pil. Hydrarg. Digitalis. Scilla. Colchicum. Alkalies. Quinia.

PERIOSTITIS.

Fomentation of Poppies. Linim. Opii. Linim. Belladonnæ. Ung. Hyd., Ung. Pot. Iod., Ung. Iodinii. *Internally,* Pot. Iodidum. Pil. Hydrarg. Sarsa.

PERITONITIS. Inflammation of peritoneum.

Leeching. Hot fomentations. Decoct. Papav., Emp. Terebinthinæ. Antim. Tart. Hyd. Subchlor. and Opium. Enema Terebinth., Enema Opii, Enema Ol. Ricini.

Chronic cases, Blisters, Calomel, Purgatives.

PERSPIRATIONS, EXCESSIVE.

Atropia. Belladonna. Ergot. Opium. Pilocarpine. Quinia. Sponging with vinegar.

PHLEGMASIA DOLENS.

Warm fomentation with Opium. Saline purges. Hamamelis.

PHRENTIS. See Brain, Inflammation of.

PHTHISIS. Consumption.

Incipient. Change of air; bracing exercise. Morrhuæ Oleum. Quinia. Potassii Iodidum. Ferri præparata.

Confirmed. See remedies for Hæmoptysis and Sweating. Blisters to chest. Ung. Antim. Tart. Emetics occasionally. For cough, Opium, Squill, Conium, or Stramonium. For diarrhœa, Opium, Acidum Tannicum, Acid. Sulph. dil., Plumb. Acet., Cupri Sulph. For vomiting, Magnes. Sulph., Acid. Hydrocyan. dil., Creasote. Wine and support. Mild, moist climate.

PILES

Gentle purges. Glycerine. Ol. Theobromæ suppositories. Opium and Gall ointment.

PLETHORA.

Purgatives. Low diet. Exercise.

PLEURITIS. Inflammation of pleura.

Acute. Bleeding or leeching. Aconite, Antim. Tart. repeatedly. Pil. Hyd., Hyd. Subchlor. Senna, Magna. Sulph. Iodide of Potassium. Iodine, Morphia. Poul-tices. Strapping. Emp. Bellad. Veratrum Viride.

Chronic with effusion. Blisters. Hyd. Subchlor., Pil. Hyd. Tapping. Quinia. Wine and support.

PNEUMONIA. Inflammation of lung.

Acute. Aconite. Blisters. Poul-tices. Quinine. Veratrum Viride. Antim. Tart. repeatedly. Pil. Hyd. or Hyd. Subchlor.

Chronic. Blistering. Ung. Antim. Tart. Saline purges. Hyd. Subchlor. Wine and Ammonia in low cases.

PORRIGO.

Wash head. Cut away hair. Apply Blistering Fluid, Acid. Sulph. dil., Acid. Acet. fort., Argent. Nit., Lotic Zinc. Sulph., Cupri Sulph., Plumb. Acet., P. Subacet., &c. Ung. Sulphuris, Ung. Sulph. Iodidi. Sod. Hypo-sulph. Acid. Carbolic. Iodoform.

PRURITIS. Itching.

Alkaline lotions (Carb. Soda, Carb. Potash, Sodæ Bibor.). Liq. Sodæ Chlorin. Decoct. Papav. Ung. Belladon.

PSORIASIS.

Arsenic, Carbolic Acid, Mercury, Sulphur, Tar, Bran Baths.

PUERPERAL FEVER.

Purges. Bromide of Potassium. Chloral. Turpen-tine. Warburg's Tincture. Nutrient enemata. Stimu-lants.

PUERPERAL PERITONITIS.

Poul-tices, Opium, Turpentine, Stimulants.

PURPURA.

Ergot. Turpentine.

PYÆMIA.

Purge. Warburg's Tincture. Nutrient enemata. Ammon. Chloride,

TYROSIS. Water-brash.

Quinia and tonics. Pills of Rhubarb and Aloes. Alkalies, if liquid vomited be acid. Acid. Sulph. dil., if it be alkaline. Ferri præparata. Kino, Catechu, Acid. Tannic.

UINSY. See Tonsils, Inflammation of.

UACHITIS.

Calcis Phosph., Magnes. Phosph., Acid. Phosph. dil. Ferri præparata. Quinia and Tonics. Potassium Iodide. Alkalies, and treatment for Scrofula.

UHEUMATISM.

Acute. Leeches. Antim. Tart. Hyd. Subchlor. Opium. Morph. Acet. Pot. Bicarb. Pot. Nit. Salicylic Acid. Salicin. Salicylate of Soda. Succ. Limonis. Cotton wool and Alkaline lotions to joints.

Heart Affection. See Pericarditis, Endocarditis.

Chronic. Alkalies (Pot. vel Sod. Bicarb.). Cotton wool and Alkaline lotions to joints. Cathartics (Hyd. Subchlor., Senna, Colocynth, Sod. Tart., &c.). Salines. Diaphoretics. Ipecacuanha. Colchicum. Guaiacum. Pot. Iodidum. Quinia.

UINGWORM. See Porriigo

UOSEOLA.

Attention to teeth. Mild Aperients (Ol. Ricini, Senna, Rheum, Sod. Tart.). Ipecacuanha.

UUPIA.

Pot. Iodidum. Wine and generous living. Dec. Sarsæ, Quinia. Poultices to scabs.

UALIVATION.

Leave off Mercury. Acid. Sulph. dil. Potassii Iodidum. Chlorate of Potash. Mouth-washes of Sulph. Copper, Catechu, Tannic acid. Borax. Ricini Oleum.

UARCINÆ.

Sulphites.

UACABIES. Itch.

Ung. Sulph., Ung. Sulph. co., Ung. Sulph. Iod. Ung. vel Lotio Sod. Carb. Lotio Cupri Sulph. Ung. Sod. Hyposulph. Ung. Hellebori. Sulphur bathus. Internally, Sulphur and alkaline sulphurets.

SCARLATINA. See Fevers, Eruptive.

Saline purges. Potassæ Chloras. Liq. Sodæ Chlorid.
Acid. Nit. dil. Gargle of Myrrh.

SCIATICA.

Aperients (Senna, Colocynth, Aloes). Warm bath. Friction.
Terebinthina. Emp. vel Linim. Opii. Emp. Belladonnæ.
Morphia subcutaneously.

SCROFULA.

Fresh air, exercise, generous diet. Potassii Iodidum.
Tinct. Iodini co. internally, and externally to swellings.
Ferri Iodidum. Ferri Carb., Ammon. Cit., Perchlor.,
&c.; Cinchona, Quinia, Pil. Hyd. Occasional aperients.
Liquor Potassæ. Barii Chloridum. Morrhuæ Oleum.
Conium?

SCURVY, or Purpura.

Mixed diet. Vegetable food, fresh. Milk. Succus Limonum.
Acidum Citricum, other Vegetable acids. Tonics. Wine.
Gargles and fomentations of Vinegar. Atropia.

SEA-SICKNESS.

Chloroform (5 drops in water). Creasote (3 drops). Æth.
Sulph., Sp. Æth. Nit. Wine, Brandy. Sp. Ammon.
Aromat. Warm plasters to pit of stomach. Spinal
ice-bag.

SEPTICÆMIA. See Pyæmia.

SHINGLES.

Paint with Oil of Peppermint or Vaseline. Quinine
internally.

SLEEPLESSNESS.

Opium, Morphia, Liq. Morph. Bimec. Syrup. Papav.
Lactucarium. Camphora. Pillow of Hops. Chloral.
Hyoscyamine. Change of Air.

SNAKEBITES.

Ammonia, internally and externally. Ether. Wine and
support. Olivæ Oleum rubbed in. Caution to bite.
Simaba Cedron?

SORETHROAT. See Throat, Inflammation of.

SPASMODIC DISEASES. See Hysteria, Epilepsy, Nervous ex-
citability.

SPLEEN, ENLARGEMENT OF. See Ague, and Scrofula.

SPRAINS.

Lotion of Tinct. Arnica. Lotions of Ammon. Chlor., Nit. Pot., &c. Decoct. Papav. Linim. Opii. Emp. Opii, Emp. Belladonnæ. Bandaging.

STOMACH, AFFECTIONS OF. See Acidity, Flatulence, Dyspepsia, Gastralgia, Cancer, Hæmatemesis.

STRANGURY, or Dysuria.

Warm bath. Suppository or Enema of Opium. Nit. Pot. Sp. Æth. Nit.

STRICTURE, SPASMODIC.

Opium.

SWEATING, PROFUSE. See Ague, and Phthisis.

Acid. Sulph. dil. Quinia. Catechu. Hæmatoxylin. Ol. Ricini.

SYNOVITIS.

Iodine, Mercury, Blisters.

SYPHILIS.

To sore. See Chancre.

Primary forms. Pil. Hyd., Hyd. Subchlor.

Secondary. Pot. Iodidum. Hyd. Perchlor.

Tertiary. Pot. Iodidum. Sarsa. Quinia. Acid. Nit. dil.

Wine and support. Alkalies. Auri præparata.

TAPÉWORM.

Brisk Cathartics (Senna, Colocynth, Jalapa, Scammonium, Hyd. Subchlor., Ol. Ricini, &c.). Radix Filicis maris. Terebinthina. Brayera. Kamela.

TENESMUS.

Purgatives (Ol. Ricini, Rheum). Ipecacuanha. Opium.

Enema Opii. Assafœtida. Ammonia, Cordials.

TESTICLE, INFLAMMATION OF. See Orchitis.

TETANUS.

Cold affusion. Opium, Morphia. Antim. Tart. Ice to Spine. Belladonna, Conium, Cannabis, Hyoscyamus, Calabar Bean, Chloral, Conia, Nitrite of Amyl. Camphora, &c. Chloroform by inhalation. Ammonia. *In mild cases,* Quinia, Wine, Aperients.

THROAT, INFLAMMATION OF. See Laryngitis, Diphtheria, Scarlatina, Phthisis, Syphilis.

Simple sorethroat. Cataplasma Sinapis. Flannel to throat.
Sp. Æth. Nit. Saline purgative.

Atonic sorethroat. Nit. Silver topically. Gargles of
Alum, Acid. Hydrochlor., Tannin, &c. Quinia.

TINEA CAPITIS. See Porrigo.

TONSILS, INFLAMMATION OF. Tonsillitis, Quinsy.

Leeches and hot fomentations to throat. Antim. Tart.
Ipecacuanha, Pil. Ipecac. co. Aperients (Pil. Hyd.,
Magnes. Sulph., Ol. Ricini). Guaiacum. Nit. Silver or
Tinct. Iodine to tonsils.

TOOTHACHE.

Extraction. Stopping. Warm fomentations. Bag of
hot salt or sand. Tinct. Opii or Tinct. Belladonnæ to
cheek. Pledget of cotton wool to tooth with Creasote,
Chloroform, Tinct. Opii, or Tinct. Camph. Tinct.
Pyrethri. Carbonate of Soda.

TRISMUS. See Tetanus.

ULCERS.

Strapping. Bandaging. Poulticing. Ointment of Chalk.
Ung. Zinci, Ung. Plumbi Acet. Emp. Plumbi vel Saponis.
Emp. Resinæ. Acidum Carbolicum, Collodion. Stimu-
lating applications (Ung. Argent. Nit., Cupri Sulph.,
Cupri Diacet.; Ung. Hydrargyri, Hyd. Nitratis, Hyd.
Oxidi Rubri, Hyd. Ammon. Chlor., Plumbi Diacet., Ung.
Mezerei). Astringents (Alumen, Ung. Gallæ, Acid. Tan.,
Zinci Sulph.). Anodynes (Ung. et Emp. Opii et Bella-
donnæ, Ung. et Emp. Conii). Deodorising (Ung. Car-
bonis, Lotio Calcis Chlor.). Caustics (Acid. Nit., Zinci
Chlor., Argent. Nit., Potassa fusa).

URETHRITIS. See Gonorrhœa.

URINE, INCONTINENCE OF.

Cold bathing. Suppository or enema of Opium. Tinct.
Canth. with Tinct. Hyoscyami. Alkalies. Tinct. Ferri
Perchlor. Belladonna.

URINE, RETENTION OF. See Ischuria.

URTICARIA.

Alkaline lotions (Sod. Carb. et Bicarb., Pot. Carb. et Bi-
carb.). Alkalies internally. Antim. Tart. Ipecacuanha.
Rheum. Senna.

UTERUS, INFLAMMATION OF.

Warm fomentations. Opium. Morphia. Belladonna.
Oleum Ricini. Injection of Decoct. Papav.

UVULA, RELAXATION OF.

Quinia. Ferri præparata. Nit. Silver or Tinct. Iodin.
locally. Pulv. Alum. Astringent gargles. Excision.

VOMITING.

Attention to cause. Acid. Hydrocy. dil. Creasotum.
Chloroformum. Morphia. Bismuthi Subnit. Alkalies.
Quinia.

WARTS. See Condylomata.**WORMS. See Tapeworm.**

Cathartics (Hyd. Subchlor., Jalapa, Scammonium, Senna,
Colocynthis; Terebinthinæ Ol., followed by Ol. Ricini).
Stanni Pulv. Mucuna. Santonica. Spigelia. Brayera.
Filix mas. Tanacetum. Assafœtida. Enema of Salt.
Quinia, Glycerine. Kamela. Areca nut.

YELLOW FEVER.

Emetic (Zinc. Sulph., Ipecacuanha, or Salt (followed by
Hyd. Subchlor., repeated doses. Croton Tiglii Ol.
Opium. Cold sponging. Astringents for hæmorrhage.
Stimulants for collapse. During convalescence, Quinia,
or Cusparia.

THE DRUGGIST'S GENERAL RECEIPT-

BOOK: Comprising a Copious Veterinary Formulary, Numerous Recipes in Patent and Proprietary Medicines, Druggists' Nostrums, &c.; Perfumery and Cosmetics; Beverages, Dietetic Articles and Condiments; Trade Chemicals; Scientific Processes; and an Appendix of Useful Tables. Eighth Edition, 18mo, 6s. 6d.

THE POCKET FORMULARY AND SYNOP-

SIS OF THE BRITISH AND FOREIGN PHARMACOPŒIAS: Comprising Standard and Approved Formulæ for the Preparations and Compounds employed in Medical Practice. Tenth Edition, 18mo, 6s. 6d.

"Mr. Beasley's 'Pocket Formulary,' 'Druggists' Receipt-Book,' and 'Book of Prescriptions' forms a compact library of reference admirably suited for the dispensing desk."—*Chemist and Druggist*.

J. & A. CHURCHILL, 11, NEW BURLINGTON STREET.

ALSO PUBLISHED BY J. & A. CHURCHILL,

LECTURES ON PRACTICAL PHARMACY.

By BARNARD S. PROCTOR, Formerly Lecturer on Pharmacy in the College of Medicine, Newcastle-on-Tyne. Second Edition, Revised and Enlarged, with Forty-four Wood Engravings and Thirty-two Lithograph Facsimile Prescriptions, 8vo, 14s.

MANUAL OF CHEMICAL ANALYSIS,

as applied to the Examination of Medicinal Chemicals. By F. HOFFMANN, A.M., Ph.D., Public Analyst to the State of New York; and F. B. POWER, Ph.D., Professor of Analytical Chemistry in the Philadelphia College of Pharmacy. Third Edition, with 179 Engravings, 8vo, 18s.

JOYCE'S MANUAL OF MATERIA MEDICA

AND THERAPEUTICS. Sixth Edition. By JOHN HARLEY, M.D., F.R.C.P. With 139 Engravings, Crown 8vo, 15s.

11, NEW BURLINGTON STREET.

PUBLISHED BY J. & A. CHURCHILL,

THE STUDENT'S GUIDE TO MATERIA

MEDICA AND THERAPEUTICS, in accordance with the British Pharmacopœia. By JOHN C. THOROWGOOD, M.D. Lond., F.R.C.P., Lecturer on Materia Medica at the Middlesex Hospital. Second Edition, with Engravings. Fcap. 8vo, 7s.

A DICTIONARY OF MATERIA MEDICA

AND THERAPEUTICS. By ADOLPHE WAHLTUCH, M.D. 8vo, 10s. 6d.

THE NATIONAL DISPENSATORY ; con-

taining the Natural History, Chemistry, Pharmacy, Actions and Uses of Medicines, including those recognised in the Pharmacopœias of the United States and Great Britain and Germany, with numerous references to the French Codex. By ALFRED STILLÉ, M.D., LL.D., Professor of the Theory and Practice of Medicine in the University of Pennsylvania; and JOHN M. MAISCH, Ph.D., Professor of Materia Medica and Botany in the Philadelphia College of Pharmacy. Second Edition, with 239 Engravings, 1,680 pp. 8vo, 34s.

COOLEY'S CYCLOPÆDIA OF PRACTICAL

RECEIPTS, AND COLLATERAL INFORMATION IN THE ARTS, MANUFACTURES, PROFESSIONS, AND TRADES : Including Medicine, Pharmacy, Hygiène, and Domestic Economy. Designed as a Comprehensive Supplement to the Pharmacopœias and a General Book of Reference for the Manufacturer, Tradesman, Amateur, and Heads of Families. Sixth Edition, Revised and Rewritten by Professor RICHARD V. TUSON, F.I.C., F.C.S., assisted by several Scientific Contributors. With many Engravings. 2 vols., 1,800 pp., 8vo, 42s.

A MANUAL OF CHEMISTRY. By G. FOWNES,

F.R.S. Edited by HENRY WATTS, B.A., F.R.S. Twelfth Edition.

Vol. I.—Physical and Inorganic Chemistry. With 154 Engravings and Coloured Plate of Spectra. Crown 8vo, 8s. 6d.

Vol. II.—Chemistry of Carbon Compounds, or Organic Chemistry. With Engravings. Crown 8vo, 10s.

11, NEW BURLINGTON STREET.

Fourth Edition, with 295 Engravings, 8vo, 16s

CHEMISTRY, INORGANIC and ORGANIC: With Experiments. By CHARLES L. BLOXAM, Professor of Chemistry in King's College, London; Professor of Chemistry in the Department for Artillery Studies, Woolwich.

By the same Author.

Fourth Edition, with 83 Engravings, crown 8vo, 5s. 6d.

LABORATORY TEACHING; or Progressive Exercises in Practical Chemistry.

—o—

Sixth Edition, with more than 500 Wood Engravings, crown 8vo, 16s.

THE MICROSCOPE AND ITS REVELATIONS. By W. B. CARPENTER, M.D., F.R.S.

—o—

With 43 Wood Engravings and 32 Lithograph Fac-simile Prescriptions, 8vo, 12s.

LECTURES ON PRACTICAL PHARMACY. By BARNARD S. PROCTOR, Lecturer on Pharmacy at the College of Medicine, Newcastle-upon-Tyne.

—o—

Third Edition, post 8vo, 7s. 6d.

A PHARMACOPŒIA, INCLUDING THE OUTLINES OF MATERIA MEDICA AND THERAPEUTICS, for the Use of Practitioners and Students of Veterinary Medicine. By RICHARD V. TUSON, F.C.S., Professor of Chemistry and Materia Medica at the Royal Veterinary College.

—o—

Fifth Edition, fcap. 8vo, 10s. 6d.

MAYNE'S MEDICAL VOCABULARY: an Explanation of all Terms and Phrases used in the various Departments of Medical Science and Practice, giving their correct Derivation, Meaning, Application, and Pronunciation.

—
